

THE GRAIN GROWERS' GUIDE

ORGANIZATION · EDUCATION · CO-OPERATION

WEST STANDS SOLID

The friends of high tariff and special privilege have failed to secure any support in the West. The articulate voice of the Prairie Provinces is unanimous for the removal of trade barriers. The people of the West are standing true to the convictions which they expressed to Sir Wilfrid Laurier last summer and to the House of Commons in December. An aroused and intelligent public opinion is the power that moves governments and stirs the national life to its foundations. Year by year the voice of the West will be stronger. May it always stand for freedom and the square deal.

SAVINGS BANK DEPARTMENT

A Savings Bank Department is open at every branch of the Bank in Canada, except in the Yukon Territory. Deposits of \$1 and upwards are received and interest is allowed at current rates. The depositor is subject to no delay in the withdrawal of the whole or any portion of the deposit. Accounts may be opened in the names of two or more persons, and withdrawals made by any one of the number or by the survivor. Every account receives careful attention.

IT PAYS TO BUY A GOOD SLING OUTFIT

One that will not give trouble in the top of the barn where it is hard to get at.
One that will stand up when heavily loaded.
One that will not destroy the draft rope.
One that will work with a large sized rope.
One that will lift easily.

THE BT SLING CAR ALWAYS WORKS

It is the simplest in construction—no springs or complications to get out of order. Every car is carefully tested before leaving the factory. It is the heaviest sling car and all parts are made of malleable. It is guaranteed to take off the largest load in two lifts. It never injures the rope and will work equally well with $\frac{3}{4}$ inch, $\frac{1}{2}$ inch or 1 inch rope. It has the largest draft wheel and puts the easiest bend in the draft rope of any sling car, and so lifts more easily.

IT PAYS TO BUY A BT SLING OUTFIT

Write today to **BEATTY BROS., Brandon, Man.** Head Office & Factory: FERGUS, Ont.
The BT Line also includes Steel Stalls and Stanchions, Feed and Litter Carriers.

FARMERS! ADVERTISE IN YOUR OWN PAPER when you have anything to sell. It's the best paper you can use, and your support, however small it may be, is appreciated.

Standard Wire Fence

The greatest improvement in wire fencing was made when we perfected "The Tie That Binds." This hooks on the running wire and locks flat on both sides. It is not driven down on the wires at the point of crossing, but at an angle—thus, it cannot injure the fence. The Tie is smooth—no ragged edges to cut animals or catch in hair or wool. Standard Steel Fence Posts are No. 12 gauge steel that enable you to build a permanent, lasting fence without staples. We also make improved Galvanized Tube Gates. If you are in the market for fencing, write us at once for our booklet and sample lock. They'll prove a lot of things that you ought to know about Wire Fence.

Saskatchewan Elevator Bill

(Special Correspondence of The Guide)

Regina, March 18.—With the close of the week has come a general clearing of the air in the Saskatchewan legislature. Things looked very different a week ago. A blockade of business by the opposition was then in full swing and threatened to continue for weeks and months. The Elevator bill had not reached committee, the budget had not been brought down and in general the end of the session seemed afar off. To-day the outlook is very much better. A compromise, or better said an "entente cordiale" has been reached between the government and the opposition. The Elevator bill has passed through committee, been read a third time and assented to by the lieutenant-governor. Much progress has been made with supply and with the budget to be brought down early next week prorogation is likely to take place on Thursday or Friday next. The blockade was terminated by Premier Scott stating that he saw no reason at present for the holding of a general election during 1911 and that it was not his present intention to hold a general election this year. He refused, however, absolutely to bind either himself or the Crown. The opposition was not altogether satisfied with this statement, but Mr. Haultain accepted it and the blockade closed with bright and good-humored speeches by the premier and the leader of the opposition. It is therefore understood that unless something unforeseen turns up the next general election in Saskatchewan will not be fought before 1912 and further that it will be fought on printed lists as provided in the Election act passed in 1908.

Undoubtedly the most interesting event of the week has been the passing of the Elevator bill. The House went into committee of the whole on the bill on Monday afternoon and the same day it passed the committee. The next morning it was read a third time and in the afternoon the lieutenant-governor came down and gave it his assent. The premier in a speech of about half an hour's length outlined certain changes asked for by the Grain Growers' Association and these, without exception, were incorporated in the bill. The first change asked for was a new name for the company. In the original bill the title was "The Grain Growers' Elevator Company of Saskatchewan." It was felt that the words "Grain Growers" might lead to some confusion and therefore the apt title of "The Saskatchewan Co-operative Elevator Company" was adopted.

To avoid any conflict with the existing Companies' act a new clause was added to the bill placing the company beyond the application of the act mentioned. This was considered necessary owing to the fact that the company has features and possibilities entirely new. The application of the existing act might have caused serious difficulties. One of the most important changes in the bill is that to clause 13 which deals with the formation of locals. As the bill stood a local could not be formed unless stock to the value of the elevator to be erected had been subscribed and the clause further provided that the shareholders must represent a proportion of not less than 2,000 acres for each 10,000 bushels of elevator capacity. The change made allows the government to waive these conditions, if it considers such a course warranted. The idea of the alteration is to allow the company to get into new districts, where the railway has just arrived and where every prospect is on hand that settlement will advance rapidly. If the company had to wait until the conditions of the clause as drafted were fulfilled there would be a likelihood of the line elevator companies getting into the new districts first and it was desired to avoid this possibility.

Another important change was that dealing with the distribution of profits. The amended clause gives the company considerable latitude in such distribution. After the payment of operation and maintenance charges the distribution of a dividend up to 6 per cent. remains as before. After that, however, the directors have three courses open to them if a surplus still remains. They can (1) distribute up to 50 per cent. of the balance among the shareholders on the basis of business brought to the company, or (2) they can distribute the balance up to 50 per cent. among the locals on the basis of the aggregate net financial results of the respective locals, or (3)

The Grain Growers' Guide

they can make their distribution partly according to (1) and partly according to (2), but the total distribution under (3) must not exceed 50 per cent. of the balance remaining after the payment of a dividend to all the shareholders. Other changes permit the company to give whatever powers they chose to the locals; to allow the locals any number of delegates it may determine and to decide whether the principle of one man one vote shall apply or not at meeting of the locals. The furthest-reaching change of all, however, is that put into the bill on the motion of George Langley. This change consisted in adding the single word "production" to clause 2, giving the company power "generally to do all things incidental to the production, storing and marketing of grain. The amendment provoked sharp criticism. It was held that the amendment would give the company the power to buy anything from a needle to an elephant. Mr. Langley's contention was that the

company should in any case have the power to buy such things as flour and feed, binder twine and lumber. That, he argued, would enable the locals to keep their operators the year through. Hon. J. A. Calder, minister of education, and Hon. A. Turgeon, attorney-general, were both opposed to the change, not on principle but thinking it would be as well for the company to go slowly. J. F. Bole, Regina City, opposed the change voicing the fears of the retail traders and alleging that as the company was being financed by the government to the extent of 85 per cent., it was unfair competition. The amendment finally carried by a substantial majority, but the vote showed peculiar combinations. The government was divided and likewise the opposition. Hon. J. A. Calder, Hon. A. Turgeon and F. W. G. Haultain voted against the change, whilst the premier, Hon. W. R. Motherwell, Hon. A. P. McNab and eight opposition members voted in favor of it.

THE LOW COST of a "Want"

Ad in The Guide is one of its most attractive features. Only 2 cents per word for one week, or 10 cents per word for six weeks.

ENDORSE RECIPROCITY PACT

The boards of trade of Edmonton, Cardston, Blairmore and Claresholm, Alberta, have all passed strong resolutions urging the passing of the reciprocity measure. In all four cases the vote was practically unanimous in favor of the pact.

C.P.R. STOCK

The common stock of the Canadian Pacific made a new high record Monday, March 20 when it went to 218 3/4.

Peanut Politics at Ottawa

(Special Despatch)

Ottawa, Ont., March 20, 1911.

Rumors of early dissolution and an appeal to the country on reciprocity are afloat to-day, the government threatening to take this course if the opposition continue to block supply. If money is not voted there will be no funds to pay the civil servants or maintain public institutions after April first and dissolution will be the only recourse of the government.

A summer election will mean no increase in the representation in the West and Canada will not be represented at the imperial conference or coronation. The government will endeavor to force the opposition to accept the responsibility

Notice

Hudson's Bay Railway

All persons who have subscription sheets for the People's Road to Hudson's Bay should send them in as soon as possible. In an article in this issue it will be seen that a trip of inspection to Hudson's Bay is planned. The amount of subscriptions secured will decide whether such a trip is possible. The Winnipeg office has been temporarily closed, and all communications and subscriptions in connection with this matter should be sent to E. A. Partidge, Sintaluta, Sask.

for this state of affairs if they persist blocking supply beyond that period. An interim supply bill, sufficient for temporary purposes, will be offered by Fielding shortly and the matter will then come to a head. The opposition proposals are to vote six months supply, postpone action on the reciprocity agreement, then hold a short session in the fall for redistribution, which will be followed by an election.

It is unlikely that either side will accept the others' proposition, however, and the opposition will probably give way and allow proceedings to take the usual course.

FREE PRESS BALLOT

The ballot that the Manitoba Free Press has been conducting on the reciprocity issue shows that the feeling throughout the West is greatly in favor of the measure. The results up to Monday night were:

Votes cast.....2471
For the agreement.....2064
Against the agreement.....407

CANADIAN FARM BALLOT

The ballot that the Canadian Farm, of Toronto, has been conducting on the reciprocity question shows a substantial majority in favor of the pact. The results up to Friday, March 17 were:

Votes cast.....2064
For the agreement.....1310
Against the agreement.....754

The paper's statement does not show the percentages from the various provinces but from the replies published it would appear that in the Prairie Provinces there were about five replies in favor of the agreement to one against. Prince Edward Island is overwhelmingly in favor of the pact while in New Brunswick the replies for and against are about even. Nova Scotia replies show three in favor to one against while in Ontario seven votes were recorded in favor to every five against.

Towards the close of a recent lawsuit in Massachusetts, the wife of an eminent Harvard professor arose and with a flaming face timidly addressed the court: "Your honor," said she, "if I told you I had made an error in my testimony, would it vitiate all I have said?"

Instantly the lawyers for each side stirred themselves in excitement, while his honor gravely regarded her.

"Well, madam," said the court, after a pause, "that depends entirely on the nature of your error. What was it, please?"

"Why, you see," answered the lady, more and more red and embarrassed, "I told the clerk I was thirty-eight. I was so flustered, you know, that when he asked my age I inadvertently gave him my bust measurement."

The Horse Market of Manitoba for Twenty-eight Years.

Auction
Sale

175 Horses

WEDNESDAY, APRIL 5th, 1911, at ONE p.m.

consisting of TWO CARLOADS of first class mares. Also several consignments of MANITOBA HORSES. Our buyers claim that they never had a nicer lot. Matched teams of different color, besides a carload of BUSH HORSES, which are a little thin but will be sold for the high dollar; besides several gentlemen's outfits who are leaving the city and have no further use for them.

Fence Co., Ltd.

WINNIPEG, MANITOBA

Leader Fence THE BEST

WE say BEST because we know of no other fence quite so good—or so strong—or so durable. Look at the lock. That is what has made LEADER fences known to shrewd farmers and ranchers everywhere. The LEADER lock is the strongest part of the strongest fence. The lock

practically interlocks itself, giving a double grip. And a double grip means a twice-as-strong lock, a twice-as-strong fence, a twice-as-good investment, no loose locks in the fence, and that makes a big item in fencing. The man of experience, the man who knows, is the man who will tell you why YOU should buy LEADER fence this season. Leader fences have

proven best by test from every viewpoint. There are many designs of LEADER woven fence, both in standard, heavy and medium weight. Every design is attractive as well as very strong, as nothing but the best galvanized wire is used. Write for catalogue showing the best fences made for horses, hogs, cattle, etc. Write today.

The Grain Growers' Guide

Winnipeg, Wednesday, March 22nd, 1911

RECIPROCITY: THEN THE REST

Considerable is being made of the fact, by certain Western members in the House of Commons, that the reciprocity agreement does not give the farmers all they asked for and does not touch the privileged interests. W. D. Staples, the member from Macdonald (Man.), last week in the House accused The Guide of misrepresenting the reciprocity agreement. He has discovered that he is opposed to the agreement because it does not hit the classes of Special Privilege. He admits that he is getting resolutions every day from the farmers' organizations in his constituency, demanding that he support the agreement. He thinks, however, that these farmers do not know what they are talking about. He should realize that they understand just as well and possibly better than he does the terms of the reciprocity agreement and the benefits it will give to the farmers. No person has ever suggested that the agreement hits the special privileged classes hard. It reduces the duty on agricultural implements $2\frac{1}{2}$ per cent. and 5 per cent., the duty on cement $1\frac{1}{2}$ cents per 100 pounds, and the duty on coal 8 cents per ton. The farmers are not satisfied with this, but they are sensible enough to take what they can get at present and then force the government to give them more when the agreement is ratified. Mr. Staples makes a great deal out of the statement of Sir Wilfrid Laurier last week, that he would not reduce the duty on manufactured articles any further at present. On this account Mr. Staples thinks he can excuse himself for opposing the agreement. He knows that his constituents want it, but that apparently does not matter. Sir Wilfrid's statement on the tariff question is by no means final. The farmers have asked for free agricultural implements, an increase in the British Preference and general tariff reduction, and will not be content with less. When Sir Wilfrid came West last summer he told the farmers at Brandon that he thought the tariff was pretty nearly all right. When he got into Saskatchewan and met the farmers at several different places he changed his mind considerably, and by the time he had gone through Alberta he was sure the tariff was not right, and promised that it would be improved. He will probably change his mind even yet as to further reductions. **THE FARMERS OF CANADA ACCEPT THE RECIPROCITY AGREEMENT ONLY AS A PART OF THEIR DEMANDS.** They are thoroughly aroused to the injustice of the protective tariff and no government will live long in Canada that does not recognize this. If Mr. Staples is sincere he will endeavor to help his constituents rather than betray them to the protected interests. We have said that the present struggle is not a political one, but is a fight between the common people and the classes of Special Privilege. Why? Because Special Privilege sees the handwriting upon the wall. They know it is only a question of time until they will have to do business upon its merits and without being legalized to milk the public. The length of that time depends upon whether the members of parliament truly represent their constituents, or whether, like Mr. Staples, they refuse to work in the interests of their constituents and prefer to play into the hands of Special Privilege. If an election is brought on during the present year before the redistribution following the census, the West will lose a great many members. **IT WOULD BE A VERY UNWISE ACTION ON THE PART OF EITHER POLITICAL PARTY TO FORCE AN ELECTION AT**

THE PRESENT TIME. The people of the West are watching their members at Ottawa very closely, not only on the tariff question but upon all the other vital questions. They know quite well what is going on at Ottawa. The reciprocity agreement is satisfactory to the West so far as it goes, and no Western member can excuse himself for not supporting it. If Mr. Staples will only act in the interest of his constituents, and do his own thinking, he can help them a great deal. If he acts in the interest of Special Privilege, and allows other people to do his thinking for him, he is not the kind of man that will help along the interests of the Western people. The Western farmers today are wise. It will pay Mr. Staples to be wise also.

LABOR FAVORS RECIPROCITY

At a meeting of the Winnipeg Trades and Labor Council, held on March 16, the following resolution was passed with but one dissenting voice:

"That this meeting heartily favors the reciprocity proposals between this country and the United States, believing that it gives a measure of relief to the producer and that it will tend to strengthen the friendly relations of the people of the two countries on this continent and will suggest the advisability of further increasing the rate of British Preference."

There was a long discussion upon the above resolution in which the leading officers of organized labor in the City expressed their hearty approval of the pact. The annexation bogey was given short shift, and emphasis was laid upon the better feeling which free trade would bring about between the two nations. It was regarded as a step in the direction of universal peace. The abuses of protection were ably exposed by one of the speakers, and the day was looked ahead to when there would be no tariff walls surrounding Canada. The debate upon the resolution was conducted upon a high plane, and though the speakers did not see in the agreement a great deal of relief for the general consumer, they realized that it was the beginning of the end of protectionism, and welcomed it accordingly.

INTERNATIONAL PEACE AND FREE TRADE

Probably the most notable public utterance of the past week was that made by Sir Edward Grey, Foreign Minister, in the British House of Commons on March 13. In discussing the question of Britain's defence he referred to the possible adoption of a proposal made by President Taft to submit all questions of international dispute to arbitration. Sir Edward Grey said:

"When two of the greatest nations thus should make it clear that under no circumstances were they going to war again the effect of their example on the world must have beneficial consequences." . . . "Nations entering such an agreement might be exposed to attack by a third nation. This would probably lead to their making another agreement to join each other in any case of quarrel with a third power in which arbitration was refused." . . . "In entering an agreement of this kind there would be risks and you must be prepared for some sacrifices of national pride. I know that to produce such changes public opinion must reach very high ideals—higher than some people think possible, but men's minds are working in this direction, and history shows instances of reaching such an ideal point." . . . "The general adoption of such a system might leave some armies and navies still in existence, but they would remain not in rivalry but as the world's police." . . . "Nations are in bondage to army and naval expenditures. May the time soon come when they realize that the law is a better remedy than force."

The proposal by President Taft to which Sir Edward Grey referred was that made on

March 22, 1910, in an address before the Peace and Arbitration Society in New York. The president's words were:

"Personally I do not see any more reason why matters of national honor should not be referred to a court of arbitration than matters of property or of national proprietorship. I know that this is going further than most men are willing to go, but I do not see why questions of honor may not be submitted to a tribunal composed of men of honor who understand questions of national honor, as arising between nations."

There is a deep significance in the fact that two of the world's greatest powers should even consider making a treaty and a declaration that under no circumstances would they ever war with each other; it is still more significant that these two should be the great Anglo-Saxon nations. Canada has a deep interest in any negotiations of this character between Britain and United States, because in the future Anglo-Saxon federation for world peace Canada will stand as a full partner. Britain and United States united for mutual peace and mutual defence would create a precedent which would secure the support of public opinion in all civilized countries. The mad haste and waste in military and naval armament would become a crime, and its inhuman toll would cease forever. No more humane or noble cause could enlist the sympathies of the greatest statesman. International disputes could be settled by international courts of justice composed of men of the highest judicial attainments and of unquestioned honor. Great wars of the past have been brought about by many petty causes, and frequently because of commercial greed or interference with trade. Freedom of trade removes the greatest incentive for war, and with the establishment of international free trade, international peace would soon follow. It will only come about by the force of enlightened and patriotic public opinion. Speaking at Atlanta, Georgia, on March 7, 1911, President Taft, in referring to the reciprocity agreement between Canada and the United States, said:

"When we entered upon the conference I authorized the Secretary of State and his commissioners to offer free trade in everything, but this Canada could not grant us, because she has a protective system and she was afraid of the competition of our better organized industries."

This is the first intimation we have had that United States is prepared for absolute free trade with Canada. The chief obstacle in the way of continental free trade is the power of the protected interests in Canada. Public opinion, however, is daily growing in favor of freer trade. It will not come immediately, but the tide is setting in that direction, and as the tariff between Canada and the United States goes lower it is bound to come down between Canada and Britain. Freer trade between the Anglo-Saxon nations is nearer at hand than many realize. The reciprocity agreement is one of the best possible guarantees of peace between Canada and the United States. By forwarding the cause of international free trade we are forwarding the cause of international peace. Public opinion in Great Britain is greatly enthused over Grey's speech. Mr. Balfour, leader of the opposition, has risen above party and has commended the spirit of Grey's utterance. The whole world is watching this great movement for the uplift of mankind.

Do the Western farmers know what they want? Do they understand the reciprocity agreement? We will guarantee to any anxious politician that the Western farmers are thoroughly informed upon these matters.

They are watching their members at Ottawa and they expect them to act like men.

UNDESIRABLE RECIPROCITY

At the present time the Peavy interests in the grain trade are making a strong fight at Ottawa against the passage of the Canada Grain Bill. F. H. Heffelfinger, of the Peavy firm, of Minneapolis, was at Ottawa on March 10, and in speaking before a committee of the Senate, he said:

"We have control of the terminal elevators at Fort William and Port Arthur. We own and operate 500 country elevators in Western Canada, and we have invested over \$3,000,000 in them. We deal in grain. In fact we are the largest grain dealers in Canada and we have to buy grain as a part of our business. This bill will prevent our continuing in business and will destroy our investments."

The Peavy elevator interests have not been an unmixed blessing to the Canadian West. They have had little consideration for the Canadian farmer, except to take all out of him possible and to give the minimum return. The government should give them little consideration. This is one style of reciprocity with United States we do not favor. The worst element in the Western grain trade came from the south where the governments have been trying to control them for years. If we have found the remedy in Canada, then by all means let it be applied. The government should take the terminals completely out of private hands and place them entirely above suspicion.

THE REASON IS PLAIN

(From the Toronto Sun)

Still all the outcry is from the cities. It is the "Sirs," the money kings, the railway magnates, the protected interests on the one side, and the farmers on the other. Why?

What answer can there be other than that those who are making the outcry, like the silversmiths of Ephesus, fear that their whole craft is in danger. They see that the promised success of the agitation by farmers for the opening of the American market to farm products may be a prelude to an assault on the whole citadel of Special Privilege. They see that, with the first concession secured, railway subsidies must go; bounties must be ended for good and all; the general tariff under which water-logged combines have been built up will be scaled down. They see, in short, the end of a system under which wealth created on the farm has been diverted into a few great city reservoirs—the end of a system under which a bare sand lot five miles from the corner of King and Yonge is valued at the price of a well equipped hundred acre farm in the county of Grey.

MEDICINE HAT DISFRANCHISED

C. A. Magrath, M.P. for Medicine Hat, at a meeting at Stratford, Ont., on March 18, is reported to have said:

"I am opposed to the reciprocity treaty. I have had more requests from my constituents to support than to oppose it, but if I were promised election by acclamation if I would support the measure, and told that I would not get one vote in a hundred if I oppose it, I would still say I am against it, for I am convinced that it is against the interests of Canada."

Is this representative government? Are the people of Medicine Hat to be disfranchised? Is it possible in this day and age that Mr. Magrath will represent and vote in favor of "Special Privilege" and against the expressed wishes of the people who elected him? Nothing shows more clearly the need of the Recall in our system of government. If the Recall were in force, Mr. Magrath would not dare vote against the desires of the people who elected him to office. But as matters stand, Mr. Magrath is the master and not the servant of the people of Medicine Hat, and may do as he likes. If he votes against the wishes of the people who elected him he must stand with Mr.

Sifton as an unfaithful servant of the people. It will be a mistake if the people from the West do not pledge their candidates at the next election to vote in their interests and not against them.

AN OVERSIGHT

The following news despatch appeared in the press of Canada last week:

New York, March 16.—The campaign for a safe and sane Fourth of July has cut off the demand for fireworks, that a majority of the stockholders of the Pain Mfg. Co. applied on this ground to the supreme court today for permission to dissolve the corporation, one of the largest fireworks concerns in the country.

If the promoters of this concern had the business acumen of some of our special privileged Canadian patriots they would have applied to Congress for a huge bounty sufficient to pay all their workmen and allow good dividends beside.

RECIPROCITY AND FINANCE

In the London Morning Post of February 18 we find that Mr. A. M. Grenfell, son-in-law of Earl Grey, chairman of the Canadian agency, and a member of the banking firm of Chaplin, Milne, Grenfell & Co., says:

"Reciprocity, I believe, will prove of inestimable advantage to Canada; great material benefits will be derived by the whole Dominion as regards both agricultural and manufacturing industries from the opening of the American markets. The future prosperity of Canada must be largely based upon the soundness of the agricultural industry, and the enhanced value of Western farming lands, which will result from reciprocity, will mean greater security to the English investors. The free and larger markets which reciprocity will open to the farmers of the West will cause greater demands for the products of the factories of the East. The Canadian statesmen have taken advantage of the situation, it appears to me, and have secured splendid terms for Canada in exchange for giving to the Americans what the Americans could have taken for themselves at any time by simply lowering their own tariff without asking any permission from Canada. Investors in England will speedily realize the many trade advantages to be derived by Canada through the reciprocity agreement, and they will be the more anxious to participate in the opportunities afforded by sound Canadian enterprises by investing their money at high rates of interest while assisting in the development of the Empire. I deeply regret to read the speeches made here by some tariff reformers who seem a trifle short-sighted on this question. They appear to be as much wedded to doctrinaire Preference as their opponents are to theoretical Free Trade."

This gentleman is an authority on British financial matters, so the reciprocity agreement will be a splendid thing for Canada from a financial standpoint, and will bring in increasing quantities of British capital.

LOSS IN REVENUE

The government recently issued a blue book in which figures are given showing the loss in revenue on each article on which the tariff will be reduced in the reciprocal agreement. The following list shows the loss in duty on agricultural implements:

Farm wagons	\$ 5,441
Ploughs	47,633
Harrows	5,729
Harvesters	4,150
Reapers	209
Drills Seed	10,924
Mowers	1,574
Horse Rakes	1,538
Cutlivers and weeders	2,713
Threshing Machines	31,411
" " parts of, including wind stackers, baggers, weighers and self-feeders therefor	17,216
Parts of agricultural implements	7,024
Portable engines with boilers in combination and traction engines for farm purposes	No reduction
Hay loaders	1,256
Potato diggers	1,561
Fodder or feed cutters	86
Grain crushers	33
Fanning mills	543
Hay tedders	36
Farm or field rollers	1,466
Manure spreaders	No reduction
Windmills	No reduction
Total	\$140,543

It will keep the government busy explaining why the tariff on agricultural implements cannot be reduced still more. The total revenue on agricultural implements does not amount to much. The manufacturers of implements in Canada do not need protection any longer. The duty charged is nothing more nor less than tribute paid by the farmers to the manufacturers. How long does the government intend to permit the manufacturers to carry on business in this way?

The Winnipeg Telegram calls us hard names for issuing the appeal in our last issue to the Western Conservatives at Ottawa. That appeal was published in the leading journals all over Canada. It was made in all sincerity, and, contrary to the Telegram's charges, was not designed to induce the members to betray themselves into the hands of their opponents. It was an appeal to the members to stand by the men who elected them, regardless of party, and to help them to get relief from tariff oppression. The Telegram declares that the agreement is unpopular in the West, but submits no proof. We believe that fully ninety-five per cent. of the Western people favor the agreement, and have produced the proof. We do not know what tariff policy the Telegram advocates. If it would explain it then we could argue the question upon its merits. We hope the Telegram will not encourage the members at Ottawa to betray the Western people into the hands of the greedy interests.

Industrial Canada, the official organ of the Canadian Manufacturers' Association, is endeavoring to prove from the words of Goldwin Smith that reciprocity with United States will lead to annexation. Since the words of Goldwin Smith carry so much weight with the manufacturers, we quote the following for their benefit:

"The upshot is that on the neck of the Canadian, as on the American Commonwealth, now rides an association of protected manufacturers, making the community and all the great interests of the country tributary to their gains."

Let the manufacturers' organ ponder over these words and see how it fits Canada today as in 1891 when they were spoken. They are the words of Goldwin Smith.

When the reciprocity agreement was being discussed by the Brantford Board of Trade three members of the Cockshutt Plow Co. took part. Frank Cockshutt, president of the company, favored the agreement, while Harry and W. F. opposed it. W. F. Cockshutt, ex-M.P., said: "Did those Western farmers pay the expenses of their trip to Ottawa?" If these Westerners were the farmers of Canada, he said he was sorry for the country. This is the kind of campaign the protected interests are putting up. They believe in milking the people to the very limit, and then when they protest, the "interests" libel and abuse. No such tactics will convince the farmers that the manufacturers are suffering.

The Winnipeg Telegram, in its issue of March 16, says it is not sure that Premier Roblin is correct in saying that the farmers will get no better prices for their grain when the reciprocity agreement is ratified. The farmers of Western Canada **KNOW** that prices will be better when the tariff wall goes down and there is free competition for their grain.

We would urge that a copy of every resolution passed by local branch associations be mailed at once to Sir Wilfrid Laurier, the local member and some of the daily newspapers. Don't forget to send them to Sir Wilfrid. Let him know that the duty must come off of farm implements and that the British Preference must be increased.

Some Side Lights on the Problem of All-Year Navigation via Hudson's Bay

In this article Mr. Partridge produces proofs that Hudson's Bay is navigable the year round with proper steamers. He intimates that if the people support the project that a steamer may be sent to investigate during April

By E. A. PARTRIDGE

Dr. T. Chisholm, M.P., in his speech on the Naval Service of Canada, in the House of Commons a year ago, said in part, "Now I am going to deal with the climatic conditions of Hudson's Bay, and first I will read something that I find in 'The Dominion of Canada,' published by the Hon. Sydney Fisher, as part of our immigration literature. Here is what he says about the Hudson Bay and about Lake Superior. We have only two ways of getting our food from the wheat fields of the West or our meat from the ranches, either by the Hudson Bay route or by the Lake Superior and St. Lawrence route. Now here is what this book says:

"The large bodies of water, inland greatly modify the severity of the climate. Hudson Bay is 1,000 miles long by 600 wide, with an area of 444,000 square miles. Its temperature is 65 degrees F. during summer; in winter it is 3 degrees warmer than the waters of Lake Superior."

"This is the point I want to make, that the waters of the Hudson Bay in winter are warmer than those of Lake Superior. Why? Because the waters of Hudson Bay are on the level of the ocean, while the waters of Lake Superior are 600 feet above the level of the ocean. Take the mountain of Ben Nevis in Scotland, 4,004 feet high, with sheep grazing at the foot of it, and snow all the year round at the top; showing that if we could raise the water of Lake Superior six or seven times as high as it is now, it would be frozen all the year round. But there are other agents. The water of Lake Superior is soft and the water of Hudson Bay is salt. I have here a document published by the Marine department which tells us that: 'Immediately after its formation sea ice contains a noticeable quantity of salt, chlorides as well as sulphates, carbonates and other salts. Such ice is very different from fresh-water ice in its physical properties. It melts below zero, and begins to show signs of melting by contraction of volume at temperatures far below zero.'

Hudson Bay Warmer

"Now then, it takes 13 degrees more cold to freeze salt water than fresh water. I have shown that there are three degrees more cold in Lake Superior owing to the elevation, and there are 13 degrees more in favor of Hudson Bay on account of the water being soft. Not only that, but the ice of the Hudson Bay is more porous, and the ice is more easily smashed. There is another reason. It is a well known law of physics that large bodies cool much slower than small bodies. The Hudson Bay, being a thousand miles one way and 600 miles the other, is a very large body of water, while Lake Superior is a smaller body and will cool more rapidly than the water at Hudson Bay. We have not only to compare the large body of water at Hudson Bay with Lake Superior, but we have to compare that with our shallow canals, and with our little shallow lakes that we meet with in the St. Lawrence route."

The foregoing is particularly interesting when considered in connection with the following extracts from an article appearing in the March number of Hampton's Magazine:—

"Winter Navigation of the Great Lakes"

"The Great Lakes stretch a third of the way across the continent. Lake Superior at their head touches some of the greatest producing centers in the country. The country's greatest store of iron ores is there. Not far away are the huge wheat fields of the Dakotas and of Western Canada. Close at hand are St. Paul and Minneapolis, and the greatest flour mills in the world. At the other end of the chain, where Lake Erie borders on New York and Pennsylvania, they touch the country's greatest consuming centres.

Between the two the Lakes furnish a great natural waterway. The yearly tonnage carried upon them to-day is six times greater than that passing through the Suez Canal, and it is increasing at the rate of fifteen per cent. per annum. This huge tonnage has to be carried during an open season never reaching nine months, seldom safely exceeding seven. Between the first part of December each year and the middle of April, the lakes are virtually frozen seas. By the end of December the Straits of Mackinac, which connect Lake Michigan and Lake Huron, become completely impassable to ordinary vessels because of ice. The locks in St. Mary's River, which connects Lake Huron with Lake Superior, have not opened earlier than April 13th, or closed later than December 26th in thirty years.

Haste and Loss

"For one-third of each year, therefore, the Lakes, instead of aiding in the transportation of this huge freight, obstruct it. Lake Michigan, stretching far to the southward like a pendant hanging from the chain, increases immensely the land

"Lake men will tell you this is impossible—that ice-bound Lake Superior cannot under any circumstances be navigated; that shallow Lake Erie freezes clear to the bottom. Twenty years ago these men were saying the same thing about the Straits of Mackinac, which also freeze to the bottom. To-day the impossible has been accomplished at these Straits, and, as you will learn a few paragraphs below, they are being crossed every day in the year. Note now that there are already numerous vessels upon the Lakes on which the underwriters furnish insurance all the year round. As forerunners of the time when the problem of the winter lakes shall be conquered, these vessels which operate throughout the year are of the keenest interest.

The Big Iron Steamers Which Fight the Ice

"If we imagine the reader turning these pages in his easy chair before his library gas log, let us contrast with his warmth and comfort an incident which, in all probability, is occurring as he reads these words. A two-hundred-foot iron

Seven Year's growth, maple bluff on farm of T. Alcock, East View, Sask.

carriage necessary to reach the East. It means money to the owner who can stretch this short season even by a single trip * * * In nearly every large lake port, as the day approaches for the expiration of the seasonal marine insurance, there is haste and disorder. Owners are clamorous to get their vessels laden and cleared. Crews are working double speed. Cargoes are put aboard in haste and without proper stowage. Lake men tell of unfilled spaces forty feet in diameter left in cargoes of bulk freighters loaded thus hastily in the season's last days. After the three days' December storm on Lake Erie in 1909, no less than ten big freighters entered Buffalo, New York, with their cargoes shifted.

"The Impossible made Possible by the Demands of Commerce"

"The fact is, the situation is without precedent. No other country, even Russia with its ice-locked ports, has faced a condition commensurate with it. These huge bodies of water already are becoming so encumbered with ships that it is growing necessary to restrict vessels to certain definite lanes in order to lessen the danger of collision. As the great American problem of transportation continues to increase with every increase in population, one can discern in that future foreseen by the great English historian John R. Greene, when two hundred million people shall inhabit the Mississippi valley, a time when transportation upon the Great Lakes must be kept open all the year round.

steamer—one of the sort that the underwriters consider a safe risk for twelve months in the year—is lying in ice which surrounds her in every direction. It stretches aft in huge flat floes, which, moving slowly, steadily, ruthlessly, are already obliterating the channel by which the vessel has come. As the edges of those floes come together with a seeming gentleness which their bulk belies, huge fragments crumble from them under the crushing impact and are forced downward into the water beneath; or turning like a dripping water wheel, shuffle out upon the surface of the ice itself, piling floe upon floe against the shore.

"There, hard white ridges rise ten to twenty feet above the level of the waves, one backing up another, with icy pinnacles jutting from their crests, and huge ice fragments clinging to their sides. On reaching the outer border of this three-quarters of a mile of seemingly impenetrable windrowed ice which separates her from the harbor mouth, the ship has stopped and backed away a half dozen lengths into the floating ice beneath her stern.

A Steel Clad Monster

"This steamer has a peculiarly rounded hull and a bow which just above the water line turns sharply back with an oddly abrupt slope. Her hull throughout is made of steel plates seven-eighths of an inch thick. At all assailable points about her water line and across her bow she carries double plates, presenting, wherever the ice could do her harm, one and seven-eighths inches of steel side, re-inforced

within in all directions by steel beams and frames. To strengthen her further against shock, a layer of cement concrete, three feet thick, has been put in about her stem and for a distance aft along her keel. This rigid steel hull, ever since leaving port, has been hermetically sealed. The plates which cover her gangway ports are screwed home by thumbscrews turned up by huge wrenches. A wooden beam a foot square locked in place behind these plates has been driven home with wooden wedges to make this portion of the hull as strong as any of the rest. The only other openings in the hull, the deadlights—themselves only eight inches across and made of glass an inch thick—are covered with inch-thick iron castings, screwed in place with wrenches as are the plates.

"Everywhere she is armored, everywhere sheeled against disaster from without; and as she lies now facing the white enemy beneath her bow, she is making use of the ultimate weapon she carries for her aid. Her bows are wreathed in steam from a hose discharging boiling water with which her crew is washing her clear of the incrusting ice upon her bow and sides, which, massing there for several hours, has begun to hold her 'down by the head.'

"After her bows are cleared of ice this hose is drawn back upon the dock, and the steamer begins to move. In four lengths she has reached a speed of eight miles an hour, in seven she is at her maximum of fourteen. Her steel sides vibrate to the beat of the engines, reverberate and thunder from the impact of the drifting ice. Suddenly the captain on the bridge, lays quick hold upon the rail; the first officer upon the deck below takes swift grasp of the bulwark; every member of the crew, wherever he may be, braces himself for the shock which is to come. The next instant, the white ice of the first windrow crashes beneath her bow. At the shock the huge hull sings like a guitar dropped upon the floor.

Crushing the Ice

"Her sloping stem, made for this very act, shoots upward as she meets the ice, breaking it downward with her weight. Huge pieces, broken off and crushed downward, drift back along her sides, swirling in the white churn of her screw. And then she stops; for though her twelve-foot propeller still beats the water into foam at her stern, her momentum is gone. But impenetrable as the barrier has appeared that divides her from the port, she has gained through it half her length. Into the three-quarters of a mile of windrow ice she has forced her way one hundred and sixty-five feet.

"You are not to be blamed if you suspect this of being fiction—this description of a hull built of some three thousand tons of steel, deeply laden with cargo of almost half its weight, hurled at full speed into an ice barrier. But it is not fiction. It is fact. Such package freighters as this one just described, the steamer E. G. Crosby, successfully battle all winter with the heaviest ice.

Other Ice Fighters—The Car Ferries

"To-day these car ferries make up the other class of all-the-year-round steamers and are most powerful winter boats. Imagine a twin-screw steamer, three hundred and fifty feet long, its hull composed of five thousand tons of steel plates, beams and rivets, no wood whatever below its upper deck. Even the flooring of the upper deck, like all the others, is of naked steel. Double armour this craft against the ice at all points assailable from without, divide it into seven water-tight compartments within, and provide it with all possible apparatus for conquest of ice and cold. Give it then, as cargo an entire freight train, thirty loaded box cars standing on four tracks on its car-deck, wedged and

Continued on Page 22

Freer Trade Must Come

NOTE:—By special request many of the directors and executive officers of the farmers organizations in the three provinces have given us their views upon the tariff for publication. They are unanimously in favor of the reciprocity agreement and most of them advocate still greater freedom of trade. There is no doubt but that the low tariff sentiment in the West is becoming thoroughly aroused. The independent spirit of the west and courageous leaders of the people will accomplish much in the next decade.—Ed.

W. J. Tregillus, Calgary, Alta.—Notwithstanding all that the protected interests are doing to create an unfavorable opinion toward the reciprocity agreement, the agreement is gaining in public favor very rapidly. I was prepared for the strong support it has received from our local unions all over the province, but I did not expect that the Boards of Trade and other commercial organizations of our large Western cities would have endorsed it so unanimously, and I believe it will be ratified during this session of parliament. Personally, I am disappointed that agricultural implements were not included in the free list, but there is nothing to prevent our government doing this during the present session, as well as increasing the British preference to 50 per cent. of the general tariff, which was what we requested on the memorable 16th of December. If we can break the tariff circle we shall be doing something worth while, and all should do their utmost to help. We cannot afford to lose this opportunity of getting a start in the direction we are aiming. The farmers of the West are taking a very lively interest in the question and are convinced that it will be of immense advantage to the Western country, as well as Canada as a whole. They believe that there should be a tariff for all, or tariff for none. They cannot see why the many should pay tribute to the privileged few, and whatever may be done at this session of parliament, I shall be woefully out in my judgment if we do not see great changes in the Western provinces in the next election. The question of the tariff, with others such as the elevator combine, etc., bears so heavily that if we were not dealing with the virgin soil we could not stand it, and in self-defense we must fight these evils. Why should the farmers of the Dominion pay an average annual tribute to the protected and privileged class amounting to \$200? This, as Mr. E. C. Drury puts it, is equal to giving them a mortgage on all our farms of \$4,000 at 5 per cent. per annum.

J. Quinsey, Noble, Alta.—I do not see any reason that the reciprocity agreement should not be passed at this session of the Dominion parliament. After the farmers have asked for reciprocity, and they represent more than one-half the population, I do not see any reason why we should not have it. In reference to putting agricultural implements on the free list, I do not see why they should not be when our manufacturers are already able to compete with the manufacturers of the United States, but the reduction they are giving us only seems like an excuse. As to preference to our mother country, it does seem like a shame to me to raise a tariff wall between us, to enrich a few manufacturers in this part of the same nation.

J. R. Pointer, Strome, Alta.—The ratification of the reciprocity agreement at the present session of parliament would be one of the most beneficial acts that parliament could do for the benefit of the farmer, and for the up-building of all Canada. We in this part of the country are firm in the belief that the existing trade relations between Canada and the United States are unjust, unfair, and destined to give the power and control of the country over into the hands of the monied interests, and against the masses of the people. I say, as do the majority of my neighbors, let parliament ratify the agreement and give us a small amount of relief, which would be a boon to all Canada—I mean for the masses. Fellow farmers and all classes who have the good of their country at heart, we should try and get this burden off ourselves and then we will have equity. Only the ones who have selfish greed in their hearts or are blinded by the influence of selfish greed, are fighting reciprocity. I am fully in accord with the views and aims of the Ottawa delegation and the teaching of The Grain Growers' Guide.

C. Burdette, Foxwarren, Man.—We see through the different papers that those who are opposed to reciprocity are getting

very busy trying to defeat it, but I cannot see, from a Western farmers' standpoint, that there is anything to lose by it, but everything to gain. I am sorry to see that our provincial government has made a strictly party question of this, and do not think that some, at least, can be sincere in the way they have voted. I am in favor of the reciprocity agreement being ratified at the present session of parliament and having agricultural implements placed on the free list, and of increasing the British preference to 50 per cent. of the general tariff, as was asked for by the Western farmers' delegation. As to the cry about this being an agitation of the Americans I do not take any stock in it, as the majority of those who are coming in from the States are really Canadians who went there from Canada some years ago, and are now returning because of the advantages here in obtaining free land for themselves and families.

John Evans, Nutana, Sask.—It is to be hoped that the government will go fearlessly on and ratify the agreement at this session of parliament. They have a chance now to redeem the lost principles of liberalism in Canada to some extent. There is no doubt that Mr. Taft's purpose in seeking reciprocity with Canada was to satisfy the insurgents within his party. They will give us reciprocity because their people want it. Now let our politi-

tative, and demand that agricultural implements should be placed on the free list as well as the ratification of the agreement at the present session.

A. G. Hawkes, Percival, Sask.—I do not think it necessary for me to state my views re reciprocity, etc., as they have been so clearly stated by our association at Ottawa, and more so since our legislature passed it so unanimously at Regina the other day. I think it goes to show that we have our governments pretty well in hand on the subject.

Peter Wright, Myrtle, Man.—I notice that the opponents of the reciprocity arrangement mostly belong to the manufacturing or allied interests and I cannot see that they have any reason for opposition as their interests are not appreciably affected by the proposed change. The Canadian farmers, in their memorials, presented to Sir Wilfrid Laurier, on the 16th of December last, asked that there should be reciprocal free trade in farm products, and if the farmers' request is granted why should disinterested parties object? We have sometimes seen in our public papers, articles in which everyone seemed to concur, congratulatory over the fact that shipments of flour had been made to China or Japan, and the prospect of development of trade with these countries was warmly welcomed. Now if it

increase be added to the preference granted to Britain. The farmer is heavily discriminated against in the matter of machinery. There is a duty of from 17½ to 35 per cent. on all machinery used on the farm while machinery used for manufacturing purposes is nearly all free, and where a duty is imposed it does not exceed 10 per cent. In asking for free trade in farm machinery the farmer is only seeking justice, and as we have been assured that a reduction of duties below what is mentioned in the reciprocal arrangements is not a breach of that arrangement, we are within our rights when we ask that the government shall place the bulk of our farm implements on the free list and extend the British preference to 50 per cent. during the present session of parliament.

Andrew Knox, Prince Albert, Sask.—So far as the reciprocity agreement goes I am well pleased with it, but—and it is a big "but"—it does not go far enough. I think if the interests of the majority had been considered there would have been at least a substantial reduction on agricultural implements in which case there would no doubt be an even greater fight put up by financial interests than at present. But men should be considered before money. However, things are now moving in the right direction, and it is up to us to keep them moving. It is much easier to keep a load moving than it is to start it again after it becomes stationary.

R. M. Wilson, Marringhurst, Man.—The reciprocity agreement offers an opportunity to help the farmer a little—help the man in overalls—and I would like to see it made a little harder for men to become millionaires. I say that special legislation in the interest of the few helps to create millionaires as if by magic, in turn making it harder for the man who works to get a fair share of the comforts due any and all who work.

M. Eugene Sly, Strathmore, Alta.—I am pleased to tell you that our union has forwarded a telegram to Sir Wilfrid saying that we urge the ratification of the reciprocity agreement at the present session of parliament; that agricultural implements be placed on the free list, and that the British preference be increased to fifty per cent. of the general tariff during the present session.

R. J. Avison, Gilbert Plains, Man.—I see that there is a determined effort being made to misrepresent the views of the organized farmers of the West, concerning the pact before the Canadian and United States governments. I am travelling continually among the farmers of Manitoba and Saskatchewan, and I find that the farmers of both provinces are united on the question of reciprocity with our neighbors to the south, notwithstanding the utterances of Mr. Sifton to the contrary. I cannot see how any person viewing the question from the standpoint of national welfare and progress can for one moment do otherwise than favor the agreement pending between the governments of Canada and the United States. At the same time I view with regret the Canadian government's failure to more fully safeguard the interests of the producers by placing agricultural implements on the free list and also increasing the British preference to fifty per cent. during the present session of the house. There can be no possibility of doubt that, had the government granted the entire requests of the farmers' delegation to Ottawa, which delegation represented the views of the great producing classes, it would have led to greatly increased prosperity for the whole Dominion of Canada.

W. H. Bewell, Rosser, Man.—The ratification of the present reciprocity agreement at the present session of parliament, would, in my judgment be decidedly in the interests of all the people of Canada, with the possible exception of

THE SIEGE OF OTTAWA

How the Farmers raided the Politicians

This is the story of the great campaign which was started last December when the farmers bombarded Ottawa. Every farmer who went to Ottawa with his 500 fellow farmers should have a copy of this book. It is a record that every farmer living in the West today should be glad to have. It tells the full story of what the farmers did at Ottawa; how they took charge of the House of Commons and told Sir Wilfrid Laurier they wanted tariff reduction and a square deal. Every man who plans to keep pace with the democracy of the West should have one of these books. Get several copies and give them to your friends and show them what the farmers have done. Per copy 25 cents, post paid; five copies for \$1.00. Special price for larger orders to local branches.

BOOK DEPT. - GRAIN GROWERS' GUIDE, WINNIPEG

cians take notice of the handwriting on the wall. I do not think they will dare close this present session without ratifying the agreement. But will they place agricultural implements on the free list? This is a standing offer of many months from the United States if we will do the same. Let the government now get this much nearer carrying out the pledges they made so long ago, and they need not be afraid but that the people will stand by them. Is our liberal government more afraid of the Canadian manufacturers than they are of the whole agricultural class? I confess it looks much like it to me with a paltry 2½ per cent. reduction on a line of goods that the whole body of organized farmers has demanded to be put on the free list. Since so much has been said about loyalty, and one party is charging the other with a want of patriotism, let the government now come out boldly and place a fifty per cent. preference to Great Britain on our statute books and at once prove their loyalty. The loyalty the manufacturers speak of, and which is talked about so glibly by those who oppose the agreement, is a questionable quantity. Annexation is a speculative subject anyway and one which they care little about. It is the entering of the thin edge of the free trade wedge that they fear. Is it possible that there is a single Western member who dares oppose the agreement, let him be liberal or conservative? If there is I do not think he will dare take the hustings again and appeal for re-election. Every farmer should at once write to his represen-

is desirable to foster and extend trade relations with these and other countries far distant from us, it certainly must be more so to establish the best possible trade relations with our nearest neighbors. Speaking from the farmers' view point, I believe that free trade with the United States in farm products cannot fail to enhance prices in our staple productions, and as time goes on, the benefits will be more apparent. We have been told (and I have never heard it disputed) that within a few years the United States will not be able to produce enough breadstuffs to supply her own people, and instead of becoming an exporter will become an importer of these commodities. And at the same time Canada is increasing and will continue to increase her productions until within a few years she will double her present output, and may exceed the amount required to supply the British market, which is our principle market at the present time. So that with an eye to the future an open market with our American friends is the only wise policy. What is true of wheat is true of most of our other products, but space forbids me to particularize. I hope that no influence which may be brought to bear upon our government will hinder them from giving effect to these arrangements at the present session, and that they will also be ratified by the government of the United States. But besides free trade in farm products the farmers requested that there be reciprocal free trade in farm machinery, and that a material

Manitoba Winter Fair

The Great Winter Event of the Province compared well with the big shows of previous years

The Manitoba Winter Fair and Fat Stock Show, which was held at Brandon from March 11 to 17, although conducted under somewhat adverse conditions, was a huge success. The winter fair building being occupied by the inmates of the asylum, the fair was held on the summer fair grounds, consequently the judging ring, which was provided for in one of the horse barns, was somewhat limited as to size and seating capacity for the spectators. Apart from this inconvenience, however, the hundreds of spectators who daily thronged the various barns were well pleased with the character of the stock shown. In all classes there was a marked improvement over previous years, and this improvement was particularly noticeable in regard to the horses and sheep. In regard to the horses there was a great increase in the number of Shires and Belgians shown, the majority of which had been imported during the past year. The low set Belgians had many admirers, while, judging from the general interest taken in the Shires, these large framed, powerful horses bid fair to soon become established in the West. Although there were many splendid imported Clydesdales exhibited, one of the marked features of the fair was the large number of Canadian-bred horses of this type that were shown. In the classes for foals, two and three-year-old stallions some excellent horses entered the ring, giving evidence that Western breeders are fast coming to the front.

The cattle exhibited showed a slight decrease in numbers as compared with the fair of 1910, but the quality was much superior. The Aberdeen-Angus led in regard to numbers and carried off the majority of the prizes. The Shorthorns were second in numbers and pushed hard for honors in the open classes, but Spicy King, owned by Sir Wm. Van Horne, was forced to take second place when it came to the grand championship, Glencarnock, owned by J. D. McGregor, of Brandon, being the winner of highest honors.

There was general disappointment manifested because of there not being a single entry of Galloways. The popular Herefords, too, had a small entry list. The majority of the steers and heifers shown were pure bred, and they showed up to better advantage than the grades. There was not a single entry of the famous "blue greys," which are generally so successful at all fat stock shows.

The showing of pure bred sheep was a marked feature of the fair. This was no doubt due to the recent imports of pure bred sheep by the Sheep Breeders' Association. Dean Rutherford, of Saskatchewan, who acted as judge, said there was a big improvement over former years both in the long and short woolled classes.

There was a splendid showing of bacon swine, and the Yorkshires were the leaders, carrying off the majority of the prizes, including the grand championship. There was a class for Poland Chinas, and some good hogs were shown. The popular Tamworths had not a single entry. Some good Berkshire grades were exhibited, but they did not show the bacon qualities of the Yorkshires.

The poultry showing was easily the best yet seen in the West; over 2,500 birds were exhibited and the numerous varieties showed improvement over former years.

The seed grain exhibits were rather below former years, but some splendid samples of Red Fife were shown. The majority of the first prizes went to Saskatchewan.

Cattle

The Aberdeen-Angus led in numbers, and carried off the majority of the prizes. The Shorthorns were close seconds in regard to numbers, and it took the judge some time to decide whether or not a Shorthorn or an Aberdeen-Angus would get the highest honors. There was only one Hereford shown, a grade steer, and the Galloways were also absent, as well as the Red Polls.

In the pure-bred Shorthorn class for steers or heifers calved in 1908, there were only three entries, and Spicy King, owned by Sir Wm. Van Horne, captured first honors. This steer was of the low set, blocky type, and although but a little over two years old, weighed approximately 1600 pounds. Silver Willow, owned by J. M. Douglas of Tantallon was 2nd. This was a good looking steer, but was rougher, and did not show the breeding of No. 1. Joseph Caswell of Saskatoon, secured 3rd place. All of these steers were bred by the exhibitors. Sir Wm. Van Horne also got 1st for calf of 1909, and the championship for pure bred Shorthorns went to Spicy King.

Aberdeen-Angus

J. D. McGregor, of Brandon, secured the majority of the prizes for pure bred Aberdeen-Angus cattle. His steer, Glencarnock, secured 1st prize in the pure bred class, and also the championship for best fat stock steer at the show. This steer is three years old and weighs approximately 1800 pounds, he is admirably proportioned, and though a little rough, perhaps, was easily the best steer at the show. Besides winning the grand championship for pure bred or grade, a special offered by the Aberdeen-Angus Society, for the best steer or female any age, the C.P.R. special for the best export steer

W. Porterfield was 1st with Little Beauty; and J. D. McGregor secured 2nd place.

For grade cows or heifers calved in 1908 J. D. Allison, of Burbank was 1st with a very good roan Shorthorn and Joseph Caswell was 2nd. G. Allison was also 1st with the calf of 1910. In the class for Shorthorns, sired by a registered Shorthorn bull, J. Codwell was 1st, and A. B. Potter 2nd.

Aberdeen-Angus grades went 1st to J. D. McGregor and 2nd to W. Porterfield. J. A. Chapman of Hayfield, secured 1st for Hereford steer, and also 1st for steer calved in 1910; 2nd place in this section going to J. Caswell.

Horse Breeders Meet

A large and enthusiastic meeting of the Horse Breeders' Association was held in the city hall. Andrew Graham of Pomeroy, president, gave the following address: "Since our earliest statistics in 1871, the horse population has increased steadily. That year in Canada, the total number of horses was 836,743 and, in 1910 that number was almost trebled, the figures being 2,213,199. In 1908 the horse population was 1,341,068 in the five eastern provinces, while in 1910 for the same provinces it was 1,318,506, a decrease in the last two years of 39,441. In 1906 the horse population in the three Prairie Provinces was as follows: Mani-

in the horse population of 47,517, we have a proportion of 2 to 10, as against the standing proportion of 3 to 10. This shows that the increase in the number of horses has not nearly kept pace with our population, and accounts in part for the steady increase in demand at ever advancing prices. While it is very gratifying to be able to note a substantial increase in the number of horses produced in this province, it is still more gratifying to know that the quality of our horses is improving year by year.

Selecting Stallions

"Greater care must be taken in the selection of the stallion. Far too many very inferior horses are standing for service throughout the province, and it is surprising how many men there are who consider themselves up-to-date farmers that will use a cheap horse rather than pay an extra \$5 or \$6 for the services of a good horse, the get of which would be worth anywhere from \$25 to \$100 more money when ready for the market. I am of the opinion that we shall never get the best results in horse breeding until we adopt some such plan or scheme as the Scottish hiring system. As I understand it the farmers of a community or district get together and organize an association for the purpose of hiring a stallion for the use of its members. Several years ago nearly all the hiring was done at the Glasgow spring stallion show. This show is held in February of each year for the purpose of giving the farmer organizations a chance to come together, and select horses to their liking for their several districts. Of late years this system has become so popular and the rivalry so keen between the different districts that a large number of the best horses are hired before the date of the Glasgow stallion show.

"At the present time about twenty of the most noted Clydesdale sires are hired for the season of 1912. This is accomplished by the association sending three or four of their best men to some of the leading studs of the country to make their selection. It strikes me that this work might be taken up to advantage by our agricultural societies.

"The work of dividing the territory and calling the first meeting for organization, being all that would be expected of the agricultural society, after which it would be up to the district to push the scheme."

Changes in Law

Following the president's address Dr. A. W. Bell presented his report as secretary-treasurer. This report contained the statement that there were brought into Manitoba from the East in 1909, 17,000 horses, and in 1910 this was increased to 33,000. The doctor pointed out that a very large portion of these should have been produced in the province. The doctor also stated that the executive had proposed a bill, which was now before the provincial legislature, asking for the following amendments of the stallion enrolment to come into force January 1914:

1. That all stallions standing for service be free from hereditary or contagious diseases, and be examined by a veterinary.
2. That no grade stallion be accepted for enrolment.
3. That the fee for enrolment be \$2, re-enrolment \$1 for pure breeds; and grades, up to January 1, 1914, \$5 and \$2.

"The reason in asking these changes will be apparent to every admirer of a good horse," said Doctor Bell, "for only by restricting the use of unsound horses can we ever hope to make the horse industry flourish. There are today, standing in Manitoba, over 200 grade stallions, no doubt some of them good, but yet will never give the satisfaction of a pure bred sire.

"We have continued to prosecute owners of stallions who did not comply with the enrolment act, there being thirty-nine cases disposed of in various sections of the province, and it is the intention of your executive to further interest itself in these and other parties, especially those travelling grade horses and giving the unintelligent breeder to understand that it is a pure bred or registered horse."

A lengthy discussion immediately followed upon the proposed bill, and many of the breeders asserted their views on the

OFFICERS FOR NEXT YEAR

Horse Breeders

President—John Scharf, Hartney.
Vice-president—Archie McPhail, Brandon.
Executive Committees appointed to attend summer fairs—J. Wishart, Winnipeg; Andrew Mitchell, Brandon; Joseph Washington, Killarney; H. J. Irwin, Neepawa; John Perdue, Souris; John Graham, Carberry; John Hall, Virden; D. E. Bolton, Russell; James McCarty, Portage la Prairie.
Association's Auditors—George Batho, Orval Austin Cohagan.
Directors—Andrew Graham, John Graham, W. McCurdy, Napinka; W. I. Elder, Brandon.
Representatives to Winter Fair Board—John Scharf, Dr. S. A. Coxe, and John Graham.

Cattle Breeders

The election of officers resulted as follows: President, James Yule, East Selkirk; vice-president, James Duthie, Hartney; secretary-treasurer, A. W. Bell; directors representing different breeds, Shorthorns—W. H. English, Herefords—G. W. Greig, Austin; Aberdeen-Angus—F. W. Collyer, Welwyn, Holsteins—James Herriott, Ayrshire—Wellington Hardy; Jerseys—W. V. Edward, Souris; Galloways—James Bray, Portage la Prairie; Red Polls—W. J. McComb; additional directors—J. D. McGregor, George Allison, Burbank; Stephen Benson, Neepawa; representatives to fair boards—Winnipeg, James Bray; Brandon, J. D. McGregor; Killarney, Joseph Washington; Portage la Prairie, Thos. Wallace; Neepawa, Stephen Benson; Carberry, James Cathrie; representatives to winter fair boards—J. G. Baron, Joseph Washington and Jas. Yule.

Sheep and Swine Breeders

President, A. J. McKay, Macdonald; vice-president, Andrew Graham, Pomeroy. Representatives for the different breeds were: Sheep—Leicesters, A. D. Gamley, Griswold; Oxfords, T. R. Todd, Hillview; Shropshires, James Ewens, Bethany; Cotswold, H. Orchard, Lintrathen; Dorsets, Joseph Chapman, Beresford; Suffolks, Kenneth McGregor, Brandon.
Swine—Berkshires, R. L. Lang, Oak Lake; Yorkshires, A. B. McDonald, Napinka; Tamworths, F. Orchard, Lintrathen; Poland Chinas, F. W. Wieneke, Stony Mountain.
Representatives to the various fairs were as follows: Brandon winter fair, A. J. McKay, Andrew Graham and Archie McPhail, Brandon; Winnipeg Industrial, A. J. McKay; Brandon summer fair, R. L. Lang; Portage la Prairie, James Bray; Neepawa, J. A. McKill; Killarney, Joseph Washington; Virden, Peter McDonald; Souris, A. A. Wood.

raised in Manitoba, the McGregor trophy, and the Gallagher, Holman and LaFrance special for the pure bred steer or heifer any age or breed, he was also the winner in every group shown. Joseph Donaldson of Brandon was 2nd with Black Joe in the pure bred class. This was a good steer but lacked the finish of his famous rival. For calves 1908 and 1910 pure bred Angus, J. D. McGregor was the only exhibitor.

Grade Steers

The grade steers shown were also of good quality. There were ten shown in class for steers calved in 1908, and taken all through it was a pretty fine class. The five prizes were placed as follows: J. D. McGregor, 1st and 2nd; A. B. Potter, 3rd; W. Porterfield, 4th; J. Donaldson, 5th. For steers calved in 1909, J. D. McGregor was 1st, 2nd and 3rd and J. Caswell was 4th. For steers calved in 1910,

toba, 230,926; Saskatchewan, 259,811; Alberta, 246,922. In 1910, these totals were: Manitoba, 244,987, an increase in two years of 14,061; Saskatchewan, 332,922, an increase of 73,111; Alberta, 294,225, an increase of 47,303; making a total increase in the three provinces of 134,475. After deducting the decrease for the eastern division of 39,441, we have a total increase for the Dominion of 90,034. Saskatchewan has the largest increase of any of the provinces, being closely followed by Alberta. This, notwithstanding the fact that the great horse ranches, especially in Alberta, have been forced to give way in order to make room for settlers. Taking the present population of the Dominion at 8,000,000, and the horse population at 2,213,199, we have the proportion of three horses to ten persons, but with an increase per annum of 250,000 people, and an increase

Free Trade Manufacturers

NOTE:—We have asked a number of British Manufacturers why they do not favor protection in their own business. Their replies should prove interesting in view of the complaints being made by Canadian Manufacturers.

Continued from Last Week

THE TANNING INDUSTRY

Penketh, near Warrington.

The tanning trade with which I am connected is exposed to competition with imported leather, the result of free imports. A number of our tanners desire protection because of the keenness of this competition. I am actively associated with tanning companies which together tan over 9,000 heavy hides a week. We feel as do our protectionist neighbors the keenness of the competition of imported leather. In spite of foreign imports our trade and the general tanning trade of this country increases year by year and we are able to export an ever increasing proportion of our production. We attribute our ability to meet foreign competition in the home market and the expansion of our exports to being able to buy all we require at lower figures than in any protected countries. We recognize that all industry is interdependent and while the keeping out of imported leather might enable us to get more for our leather in our home market we do not think it would compensate us for the disadvantages due to the operations of a general tariff. We further recognize that any increase in leather values would handicap the boot manufacturer to whom the bulk of our leather goes as their raw material. The added price would be passed on to the customer whose money would not go so far, and whose spending power would thereby be reduced; this would result in a lessened demand for leather. We further have to consider that a large proportion of our leather goes abroad in our expanding export trade of boots. This trade is developing rapidly because our boot manufacturers are able to procure their raw material lower than any manufacturers in the world because the world's markets are open to them as buyers. If the price of leather be increased to benefit the tanner, that increase will cripple the boot manufacturer and the present large increase in the export of boots will be checked and this will, in turn, re-act upon our tanning trade. Even if the general good were to be put aside, and the issue narrowed to our own trade of tanning, I consider the policy of free imports of all we use is the wiser one. I stand by Free Trade because it is economically sound, commercially advantageous, and ethically just.

QUILTS AND TOILET COVERS

Thos. Taylor, Ltd.,
Manufacturers of Quilts and Toilet Covers
Savile Mills, Bolton.

We have yours of the 28th October, asking us to give our reasons, as British manufacturers, for being free traders. The idea is so simple to us:—

Who wishes to pay more than he need for anything he buys? If prices of commodities of any kind advance from any natural cause, it is always lamented, as it reduces the consumption, and consequently the production, which cripples trade. Why then should anyone wish to increase the cost of any commodity by artificial means? And, if it is thought necessary by how much should they increase it and why not be more rather than less, if it is a good thing to do? Let a protectionist try a good big tariff on things and consider how it would work, and if a heavy tariff would work detrimentally a smaller one would do so in a lesser degree. We assume, of course, that if one commodity is taxed, that the tax will go all round, so that there will be no manufacturer but what is taxed on everything or, at any rate, on the bulk of all he uses. How, then, can he hope to sell against a manufacturer who is less taxed or not taxed at all on his commodities? He has also to pay higher wages

because his workpeople are taxed on all they buy and consequently have to have higher wages? Speaking of tariffs being general, reminds the writer of a long discussion he had with a number of Americans when once returning from the States. One American stated that he admitted that everything should not be taxed, and I asked him what he would prefer not to be taxed seeing that tariffs were such a blessing; he replied that he advocated that hides should not be taxed. I asked him if he was a boot manufacturer, and he said he was. I replied that he was a free trader, and that if he went round the assembled company (there was a large company) and they all exempted the commodity that they each were interested in they would arrive at the same opinion as the writer, that is for free imports. Another American said he did not understand John Bull, as he imported more than he exported. The writer told him that he had a mill and a residence in a town in Lancashire, and that from January to December he endeavored that at each establishment his imports should exceed his exports, and that the difference was profit, and it was the same with John Bull, and that whilst it was so, we could work shorter hours than any other nations, as the nations were supplying his wants and that the more the world sent him, the less he need to work for. As British manufacturers, we were not content with our home market only, as the world was larger than Great Britain. The writer also told the Americans that if they attained to all they could claim for their tariffs they would only be able to exclude us from their market. But they could not do that, as they paid 60 per cent. duty on our goods, for doing which we thought they were very foolish. But, should they drive us out of their market, the very fact of that would still more handicap them in meeting us in the world's markets, and we preferred the world's markets to even the markets of the U.S.A. One asked the writer how he liked them dumping on to us, and he replied "very well;" that he understood that "dumping" was selling at less than cost price—at a price at which a thing could not be reproduced, and that if that was so, the writer would give him his address, and he could dump on to him as much as he liked and that he (the dumper) would be first to tire of the game.

The writer pointed out that the people of the U.S.A. had to pay more than they should to allow the U.S.A. manufacturer to dump into England. Also, that the Britisher made good use of the dumped material, and out of the cheap goods, got orders (and so found work for our people) that they otherwise might not have got. He instanced a case of a contract for a large bridge for the continent in which a North of England firm got the order against a German firm, and then the German complained that the English maker had got the contract because he could buy German steel cheaper than he (the German) could buy it. Thus, we beat the dumping country with their own stick, all to the loss of the people generally of that country. We know cases where the Englishman gets orders from America because he buys cheap German materials, and he gets orders for Germany because he buys cheap American material. Thus, everything comes naturally to the net of the free trader. We cannot understand a nation propping up any industry. Someone has to pay for it, and it is not its competitors but its own consumers. We think an industry supported by tariff props is no good to any country—the country might as well keep a number of pensioners. No industry is sound until it runs on its own merits, and, in doing away with tariff protection, an industry will "lose its life to save it" as is the case in many other matters. Britain has every reason to be satisfied with free trade even if the rest of the world remain protectionists and whatever amount of tariff they put on. The tariff country pays and the free trader survives through it all, and will do so. For Britain to abandon Free Trade would be for it to commit commercial suicide.

Here is what Every Farmer Needs

"THE COWL BRAND RANCH REMEDY CHEST"

The Chest contains the following articles of everyday use on the farm:

- 1 Qt. "Live STOCK DRIPS" will destroy lice and mites. Kills all germs in scabs, cuts and abrasions.
- 1 Qt. "VERMIN DEATH"—A beautiful brown woodstain that exterminates bed-bugs and other vermin.
- 1 Qt. "POULTRY PEACE" that rids birds and buildings of lice, mites and other vermin.
- 1 Pt. "MANGE CURE"—A most successful germicide.
- 1 Pt. "RINGWORM CURE"—A tested and certain cure.
- 1 Pot "OINTMENT-OF-TAR"—For all kinds of sores and cuts.
- 1 Pt. "RUB-IT-IN"—A Liniment for sprains, spavins, rheumatism, etc.
- 1 Pt. "HOOF OIL"—Will cure contracted hoofs or sand cracks.
- 1 Pt. "HARNES LIFE"—Will soften and waterproof any harness and will not blacken the hands.

When you have used up any or all of the articles in above list re-order from your local dealer.

Chest can be hung up in a convenient place in barn or stable.
Order today and be prepared for emergencies.

This Complete Outfit, Reg. \$5.00, Special Mail Offer,

TALK TO TWENTY THOUSAND FARMERS for a few cents a day, through a little "Want" Ad in The Guide. Think of it! Try it if you have any farm produce, lands or machinery you wish to sell.

Lloyd Harris Bolts

(By The Guide Special Correspondent)

Press Gallery, Ottawa, March 11

The third "bolter" from the liberal ranks on the reciprocity issue, declared himself this week—Lloyd Harris, the member for Brantford. Mr. Harris is one of the founders of the Massey-Harris Company, and the Parliamentary Guide describes him thus: "A capitalist. President Brantford Screw Co. Ltd., Canada Glue Co. Ltd., vice-president, Canada Starch Co. Ltd., Manufacturers' Life Insurance Co., Brantford and Hamilton Electric Railroad; director, Dominion Power and Transmission Co., Underfeed Stoker Co. of America; Trusts and Guarantee Co. Ltd.; president Brantford Board of Trade, 1900-3; member Brantford City Council, 1905-6; Ontario vice-president Canadian Manufacturers' Association, 1906. Church of England. First elected at general election, 1908. A liberal.

Mr. Harris spoke against reciprocity on Wednesday night. He said he had reached the conclusion that he could not support the government in this proposal with very great regret, but he did not think the proposal was in the best interests of Canada. Apart from the economic feature, he had four good and sufficient reasons, at least they were sufficient for him, for opposing reciprocity. First, the government had no mandate from the people; second, he objected to the fact that two men had gone to Washington and made this arrangement and were now trying to force it through the house; third, the premier had given his word that there would be no revision of the tariff without investigation by a commission, and he had repeated that promise to his constituents; and fourth, this proposal had hurt the pride of Canadians.

Opposition to Reciprocity

Mr. Harris claimed that the opposition to reciprocity was not confined to the business, manufacturing, financial and commercial interests, but it also extended to the farmers. A Canadian agricultural journal had taken a ballot, and the number of votes recorded throughout Canada was only 1,000 for reciprocity and 600 against. But in any event Canada was not purely an agricultural country. Manufacturing was a necessity, at least he thought we required manufactures, but if it was not the policy of the liberal party to have manufacturing he supposed he would have to remove himself from Canada.

He was of the opinion that reciprocity would be a bad thing for the farmers, and, touching upon the meat question, quoted with approval the resolution presented to the government by the farmers' delegation on December 16 asking for the establishment of a chilled meat system.

Some members of the house, Mr. Harris said, would attribute his opposition to this measure to the fact that he was unfortunate enough to have an investment in a business which manufactured agricultural implements, but that was not the reason for his opposition. Much had been said and done that was not altogether fair to the implement industry, and both parties had made a political football of it. The conservative government reduced the duty from 35 to 30 per cent. because they thought it would catch votes in the West, and the liberal government had made further reductions for the same purpose. He had no objection to the government doing anything with the tariff, provided they knew that what they were doing was right and proper and just.

Thinks Tariff Necessary

"I am not a high protectionist," said Mr. Harris, "but I do think we require a tariff in this country. I think it is the only practical way of raising our revenue. If any government would even make the suggestion to change our system and raise revenue by direct taxation, I do not believe it would last 24 hours.

"The agricultural implement industry is perhaps one more indigenous to the soil than any other, and therefore should not enjoy so high a tariff. But the inconsistency of our tariff is this, that when the duty was reduced on agricultural implements from 35 per cent. to 20 per cent., the manufacturers of these implements were still paying as high as fifty per cent. on their raw material. When the duty was reduced from 20 per cent. to 17 per cent, the government took the ground that 20 per cent. was a revenue tariff and made a concession on the raw

materials for implements on which the tariff was reduced—there were only two or three of them—binders, mowers and rakes. The government made a concession in the duty on the raw material of these implements which compensated the manufacturers to some extent for the reduction from 20 per cent. to 17½ per cent. in the duty. At present these same implements are being manufactured, and the manufacturers are paying duty on all the raw materials, with a few exceptions, which the government made as high as 50 per cent. altogether they only got a protection of 17½ per cent.

"Again, the manufacturers of implements in this country have to pay 27½ per cent. duty on every bit of machinery which they import for their plant and on all the materials which go into the construction of their plant. About 40 per cent. I think that would figure out on their coal because I do not think coal is worth more than \$1.10 at the mine mouth, and on their factory supplies, which would amount to a very large aggregate, they pay duties varying from 25 per cent. to 35 per cent."

The Implement Business

Further on, Mr. Harris said this arrangement was going to mean that the development of the agricultural implement business in Canada was going to stop. The concern he was connected with had found it necessary, on account of the agitation and the trouble which they thought would come, to remove part of their works to the United States. He admitted, in reply to Mr. Fielding, that the Massey-Harris Company had secured its plant in the United States before this treaty was negotiated, but said this was done on account of the agitation for lower duties. He had no objection, if the implement duties were too high, that the government should lower them, for he did not believe in a protective tariff that would create conditions under which one man or a group of men could get rich at the expense of the people. He thought, however, that in justice to the implement manufacturers the government would necessarily have to make reductions in the steel schedule, which would injure that industry. The prime minister had stated that he did not intend to do anything with the duties on manufactured goods. He believed that was Sir Wilfrid's firm intention, but no power on earth could keep any government from giving the farmers, who were now going to have every vestige of protection taken from them, their just claims when they would come down and demand that every other interest be put on the same footing.

Other speakers on reciprocity this week included Hon. William Templeton, of British Columbia, who declared that reciprocity would greatly benefit the industries of the Pacific coast province; W. S. Goodeve, a conservative member from the same province who put forward an entirely opposite view; H. H. Miller, South Grey (liberal); D. D. McKenzie, Cape Breton (liberal).

GRENFELL FAVORS PACT

London, March 10.—A. M. Grenfell, son-in-law of Earl Grey, writes the British Weekly: "Canada's proposed reciprocity with the United States means nothing to me but the most natural proceeding, exactly what any man would commend. To construe it into an unfriendly act seems to me suicidal, seeing we cannot prevent it, and to display selfishness, as if we thought she exists entirely for our benefit. Intense recognition of their own nationalism is one of the first things that strikes the Englishman in Canada. For myself, I believe that not only will Canada be an economical power in the world of unparalleled importance, but doubly great for knowing how to use it. If ever separation comes it will be no fault of Canada's, but only through the limitation, inadaptability and selfishness of our own vision."

HIS AILMENT

Medical Student—"What did you operate on that man for?"
Eminent Surgeon—"Two hundred dollars."

M.S.—"I mean what did he have?"
Eminent Surgeon—"Two hundred dollars."

Dignity and Honesty in Advertising

Advertising stands in the same relation to the prospective buyer as the manufacturer's direct travelling representative, and just as the latter's reliability may generally be gauged by his reasonable and dignified arguments together with the established reputation of the company represented, so may the truthfulness of advertising be determined.

In the advertising of cream separators there are a great many claims made which it is impossible to substantiate and which respective machines in actual use will themselves prove to be quite unfounded. The publishers of newspapers and farm journals while desirous of protecting readers cannot reasonably be expected to investigate the statements of advertisers. The individual reader must do this for himself and may do so very readily.

Thus, when he is told that a certain machine was awarded a first prize at any Canadian Fair or Exhibition, write the manager of such Fair and ask him to corroborate the statement. He won't do so for the reason that there has never been a test of cream separators made at any Fair or Exhibition in Canada. When he reads an endorsement of any machine purporting to be written by anyone officially connected with the government dairy department he should correspond with the head of the department when he will find that the testimonial was written by a discredited and discharged employee, or by one who had severed his connection with the department before the testimonial was given. When he is told that a particular kind of separator will skim cleaner and faster, run easier and last longer, is easier to clean and cheaper than the New Improved De Laval he should invite the agent making such statement to bring along his machine and prove even a single one of these statements. A De Laval machine will gladly be furnished for the purpose of comparison and entirely without obligation. The result will demonstrate the point of this advertisement and also the fact that no claim is made for the New Improved De Laval Separator which the machine itself will not make good. Try it. Write for Catalogue No. 57.

Heart to Heart

This is a department which is conducted for the benefit of our readers. The chief feature is the great variety of thought expressed. No contributions for this department are solicited, and none are paid for. They are all free-will offerings from the hearts of The Guide readers. It does not seem right that readers should be denied the privilege of perusing some of the letters which the editor receives, so they are here presented.

PERFORMING VALUABLE FUNCTION
I consider your publication most ably edited, and in the main correct in principle, and that it must be performing a function which no other journal in Canada is doing.—M. J. McLean, Diligence, Alta.

EDUCATES FARMERS
I will do my best to get some more subscriptions as I feel it is the only way to get the farmers educated, as they need to be more so now than ever. Believe me to remain yours in unity.—Wm. Lake, Asquith, Sask.

KEEP BALL ROLLING
I admire the stand taken by you for the relief of the down-trodden farmers, and I sincerely trust that you will continue to agitate, agitate and keep the ball rolling.—Jos. W. Bell, Summerview P.O., Alta.

LIKES INDEPENDENT STAND
I am sending in renewal for The Guide. Cannot navigate without it. Don't worry because political people blame you for knocking their favorites. Keep at it. I was as stiff a party man as most people, but see that both parties are sixes and can enjoy seeing Conservatives handled rough as well as Liberals.—Thos. C. Daly, Harrowby, Man.

PIGEONS REFUSE PLUCKING
Your paper has filled a real want in the West, but it is only on the threshold of its usefulness. Want of organization amongst the agricultural interests has really let the manufacturers, etc., believe farmers were simply "well-fattened pigeons" for them to pluck.—F. Bottomley, Lloydminster, Sask.

DESERVES CREDIT
The Guide is certainly advocating everything in the interest of the West and deserves great credit. I will always have a good word for your paper in our community.—F. G. O. Andrews, Nanton, Alta.

WE WILL TRY
You are doing the best work for the common people of any paper I have ever seen. Can you keep it up? I would never advise another journey to Ottawa, for I think we should no longer lick the hands that have been striking us for so long.—Thos. Svalborn, Outlook, Sask.

ALL WORKING TOGETHER
I have read The Guide now for one year and must say it is a good paper. The Guide should be read by every farmer, for it is a paper that will teach him what to do. If The Guide would be printed and published in different languages it would mean a lot to bring on the good work. Whenever I read The Guide I always see how unions are forming here and there, and how members are adding. I am living here in a big German settlement where I am a German myself, but the majority can't read English. We have formed a union here a year ago of 47 members, but it seems as though everything is going asleep again. As I said before, it needs something to keep them awake. The plain thought should always come before them.—Paul Marquardt, Le Due, Alta.

OBJECTS TO TOBACCO
Whereas The Guide has a commendable object in aiding the people to form correct views upon economic, social and moral questions, and the diffusion of material prosperity, intellectual development, right living, health and happiness;

That whereas the G. G. Guide publishes an advertisement of Buckeye cigars, and tobacco is acknowledged to have a detrimental influence, causing loss of intellect, softening of the brain, paralysis, functional derangement of the heart, and diseases of the liver and kidneys;

That whereas the said advertisement of Buckeye cigars appearing in The Guide from time to time has an insinuating, disparaging, depreciating effect on the moral dignity of the Grain Growers;

That whereas the said pictures are an outrage to the common decency of the common farmer, which they apparently are intended to represent;

That whereas we cannot understand the consistency of advocating social and moral purity, intellectual development, health and happiness, and then advertise something that is detrimental to the human race;

Therefore be it resolved that we, the undersigned, hereby request the publishers of the Grain Growers' Guide to reconsider the advisability of the advertising of anything that is acknowledged to be of a doubtful character, and the publishing of pictures that have an insinuating, disparaging, depreciating effect on the moral dignity of the Grain Growers; and your subscribers will ever read with appreciation the Grain Growers' Guide.—D. N. Finlay, secretary-treasurer; E. V. Magwood, vice-president.

SOME GOOD ADVICE
In renewing my subscription to The Guide I should like to give you a few words of encouragement and appreciation. I must congratulate you on the high standard at which you have maintained The Guide during the past year. I was a little afraid at one time that The Guide as a weekly might develop, or deteriorate I should say, into a common-place continued story affair, but I see no danger of that now. The Guide is to be commended for the straightforward, fearless stand it has taken on all public questions discussed in its columns. While

not always agreeing and seeing eye to eye with its statements, I have no fault to find on that score. The success of the farmers' movement last summer to meet the premier on his Western tour was largely due to the persistence of The Guide in keeping the matter to the front. The same can be said, I believe, in a larger degree in regard to the Ottawa delegation. Scores of thinking farmers see and feel the wrongs and injustice which the farmers of the West labor under, and they have the desire, an overwhelming desire in some cases, to do something to break the oppression. The Guide is, and will be more and more, a factor in bringing together these men for a common united effort. The agricultural pages are a good thing, especially the idea of asking practical farmers to write on a given subject. You have about four pages just now. I would say do not exceed it. We are burdened with advice on how to farm by weeklies, dailies, Sunday papers; and every conceivable kind of newspaper when they run out of matter undertake to tell the farmer how to farm. What we need is reliable information as to the best means of marketing our produce. This is a subject which I do not believe can be over done in The Guide. A year ago I complained about the scant attention that was given Alberta editorially, and the past year has been a great improvement on that question.—Fred H. Herbert, Strathcona, Alta., 1911.

KEEP SEARCHLIGHT SHINING
I wish to say by way of encouragement that I consider the Grain Growers' Guide the best paper ever published in Canada in the interests of sound government and therefore in the interests of the people as a whole. Keep throwing on the searchlights in dark places. Some don't like it. But never mind, some love darkness rather than light because their ways are evil. Farmers of the West, stand by The Guide, stand together. Don't let the cloven foot of party politics split our ranks. I am not a prophet or the son of a prophet, but behind the cloud that has hung over some of our heads for a long time I think I see the silver lining of a brighter day.—Thomas Johnson, Saskatoon, Sask.

A POWER IN THE LAND
Since I became a reader of The Guide I have found it to be a very useful, interesting, fearless and truthful publication. Useful in its education, very interesting in its fair and open manner of handling the views of the outsiders, fearless in its exposures of graft and crookedness, truthful in its expression of the truth as it is given it to see the truth. I have followed you quite closely since I became a reader of your valuable paper, and I am convinced that The Guide is one of the most powerful publications in the fair Dominion.—Edgar Crandell.

ADMIRE'S FEARLESS MANNER
I am interested in the fearless manner in which you uphold the farmers' cause and the fair and manly way you criticize the speeches of the enemy.—A. Sparling, Ellerslie, Alta., February 2, 1911.

ABLE CHAMPION; JUST CAUSE
In a war for human rights there never was an abler champion or a cause more just.—O. M. Gilbertson, Gilby, Alta.

KEEP IT UP
It is with a great deal of pleasure that I enclose you renewal for another year. Keep steadily on, you are doing a grand work. The columns and the pages of sophistry which are being published for a consideration to counteract your influence will prove ineffectual for you have got the people thinking. Those letters from the manufacturers of Free Trade Great Britain was a great idea.—Robert Fisher, Oak Bank, Man.

WISH EVERY SUCCESS
I am so well pleased with your paper that I wish it every success.—J. H. Hildreth, Davidson, Sask.

AN EDUCATIONAL FACTOR
Can you send me a few extra copies of The Guide, as I am very loath to part with mine, the information contained being too valuable to lose? I think the articles in The Guide do more in an educational way than all the talking I can do.—Suttman Johnson, Hart, Sask.

TO HELP US
How can we increase the usefulness of The Guide? 1. By each member becoming a canvasser and persuading his neighbor to subscribe to the paper. Prosperity to The Guide means prosperity to the farmer; 2. By posting your copy to some old friend at a distance. The old copy will do more good out on the prairie than it will lumbering your bookshelves; 3. By lending your copy to some mean, thick-headed, never-get-out-of-the-rut old farmer who is too stingy to subscribe. It may be that your neighbor is not so thick-headed or mean as you fancy. Your fish will never bite if you do not throw bait at him.—Thos. C. Robson.

THE PROPER DOPE
You certainly dish out the proper dope. Your paper will surely help the Western farmers to show the common people of Canada how to get what is coming to them.—Jas. S. Johnston, Atholma, East Kootenay, B.C.

Before Buying a Farm

or any piece of property, the cautious man makes most careful investigation.

A buyer of Life Insurance should be equally careful—more so, indeed, for his purchase affects others as well as himself.

Make leisurely and careful examination of the various forms of Life Insurance by requesting pamphlets from The Great-West Life Assurance Company. A description of the principal Policies issued will be mailed—rates at all ages—and everything necessary for a man to choose the best Plan for his own individual needs. And there will be no undue solicitation to insure.

The Great-West Life Policies are considered the best by a sufficient number of persons to give the Company—for four successive years—the greatest paid-for Canadian business of all the Companies. That, surely, is one good reason for looking into these Policies.

Manitoba Winter Fair

Continued from Page 9

matter, and the majority of them were for having grade stallions done away with altogether in Manitoba, some even going as far as to say that the breeders should have them excluded within one year. It was finally moved by J. Graham, and seconded by H. English that the matter be left in the hands of the new executive, and for them to make any changes they saw fit after hearing the general discussion and feelings expressed at the annual meeting.

Draft Horses

Mr. K. E. Drennan, of Glenora, Sask., delivered a forcible address on "The draft horse of the West." Mr. Drennan said that there were many horses being brought into the West which should have been bred right at home. He emphasized the fact that the draft horse should be produced on the farm. The situation regarding draft horses, he said, was worse in Saskatchewan than in Manitoba. The people, he said, were overlooking a big opportunity by not producing their own draft horses. He referred also to the high class draft stallion, which often did not prove as good as the common grade, for the simple reason that the animal was pampered and did not receive sufficient exercise, and he also stated that the best horses were not being shipped from the East; that a big percentage of culls were yearly dumped upon the farmers of the West, simply because the farmers were not educated to the requirements of good horses. Small horses, he said, were an outcome of the poor mares in the West. The pure bred horses were up to the standard, but the farmers' horses, in many cases, were far below the standard because of the lack of care in breeding.

Prof. Peters, of the Manitoba Agricultural college, gave a short address emphasizing the fact that good colts were not being raised in the West because the dams were not being properly cared for. He said that if the foal was properly cared for during the first three days of its life that it would invariably grow into a good strong horse. He also gave several good pointers in regard to feeding mares during the winter.

Dr. Coxe, of Brandon, gave an interesting talk in regard to colts. He advised strongly that the mares should be kept out on the grass previous to foaling, and in this way many of the losses of colts would be overcome.

Sheep and Swine

The annual meeting of the sheep and swine breeders was well attended. President Walter James was in the chair. He pointed out that the number of sheep in Manitoba had risen from 17,922 in

1909, to 32,223 in 1910, showing that interest in this line was on the increase. He congratulated the sheepmen very heartily on this advance toward the preservation of the fertility of the soil. With reference to hogs, Mr. James said that he feared that owing to the high price of feed a number of breeders had been obliged to part with many desirable females.

Report Presented

Dr. A. W. Bell, the secretary-treasurer read his annual report, which was as follows:

"During 1910 your executive considered the advisability of holding sheep sales in the province, with the idea of stimulating a most important though fast declining industry.

"Late in September Messrs. A. J. McKay and Geo. Allison were commissioned by the executive to visit some of the Western ranches to make the selection of four hundred head for the three sales—Brandon, Portage la Prairie and Winnipeg—and to these two gentlemen are the thanks of the association due for the splendid selection made by them, enabling the association to pay for everything in connection with the sale; and also to the farm papers who gratuitously made frequent reference to the sales; and to the Canadian Pacific railway for assistance rendered in quick transportation.

It is a source of much satisfaction to know that all the buyers from whom we have heard are well satisfied with their purchases.

It has been decided to continue these sales again this year, and no doubt they will be greatly enlarged. Whilst the number of sheep sent forward to Winnipeg for mutton during 1910 was about 25 per cent. greater than 1909 there is still a wide field for expansion along this line.

The number of hogs sent forward for slaughter purposes the past year has fallen off considerably from that of 1909, when everybody seemed as if they were endeavoring to unload everything they had in the shape of a hog; in consequence, the price of the same has been considerably higher than ever before. The demand of pure bred hogs has been greater than the supply, many breeders intimating that their young pigs are spoken for before being farrowed. This, added to the increased price for pork is most assuring to the hog industry.

Government Will Build H.B.R.

(By THE GUIDE SPECIAL CORRESPONDENT)

PRESS GALLERY, OTTAWA, MARCH 11

Hon. Geo. P. Graham, in making a general statement with reference to the department of railways, over which he presides, announced in the house on Friday afternoon that the government has decided to build the Hudson's Bay Railway itself, and that a plan for its operation will be submitted to the house for consideration at a later date. He also stated that the arrangements to be made by the government will provide for elevators, wharves and steamships, and that the supplementary estimates will include an amount sufficient to enable construction to be commenced. Mr. Graham said no decision had yet been arrived at as to whether the terminus of the road would be at Port Nelson or Fort Churchill, but from the railway standpoint Port Nelson was considered best. The two harbors were still being examined, but as the two routes were identical for the first 170 miles from the Pas, it would be possible to commence construction without waiting for the decision as to the terminal. The cost of the road, including the terminal elevators and other facilities was estimated at from \$25,000,000 to \$30,000,000, and probably five or six millions could be added to those figures, but even so the money would be well expended.

Railway Statistics

The year 1910, Mr. Graham said, had been the best in the history of Canadian railroads. He gave the following figures in regard to railway matters in general:

Railway mileage in Canada, 24,731; increase over last year, 637; increase for ten years, 6,591; mileage under construction, including G. T. P. and National Transcontinental, 4,500.

Capital invested, \$1,410,297,687; increase over last year, \$101,816,271; increase in ten years, \$594,186,850.

Number of passengers carried in 1910, 35,894,570; increase over 1909, 2,211,267; increase in ten years, 17,503,833.

Tons carried in 1910, 74,482,866; increase over 1909, 7,640,608; increase in ten years, 37,483,495, or 101 per cent.

Employees, 123,768; payroll, \$67,167,703; add employees in railway hotels, elevators, etc., and total is 140,477; total payroll, \$72,337,626.

Tons of freight carried on canals in 1910, 42,990,608; increase over 1909, 9,269,860; increase in ten years, 37,325,349; or 660 per cent.

The Grand Trunk Pacific has expended on the mountain section \$18,765,930, and on the prairie regions, \$34,436,163; cost of National Transcontinental Railway to date, \$94,580,500; sum estimated to complete it, \$50,759,200; total, \$145,339,700.

Welland Canal—Length 26½ miles; total rise, 326½ feet; total spent in original construction and later enlargement, \$28,388,616; three routes being tested.

Intercolonial Figures

Intercolonial railway mileage of main, track 1,490, which is more than four times the distance between Montreal and Toronto, and longer than from Montreal to Winnipeg; capital to date \$83,819,218; increase this year \$1,000,000; surplus in 1910, \$623,164; difficulties longer from St. John to Montreal than C. P. R. by about 250 miles; water competition; not built as a paying road; lowest rates in Canada; revenue per ton per mile less than C. P. R. by 40 per cent.; less than G. T. R. by 21 per cent., and less than C. N. R. by 32 per cent.; revenue per passenger per mile less than C. P. R. by 7 per cent.; less than G. T. R. by 4 per cent.; and less than C. N. R. by 20 per cent.; with the same revenue per ton for freight and per passenger as the C. P. R., the I. C. R. last year would have a net revenue of \$3,389,246, or equal to about 4½ per cent. on the cost.

I. C. R. compared with the T. and

N. O. The Ontario road carries freight which admits of high classification. Its rates are also higher. As a result of its earning power per ton per mile last year was 179 per cent. higher than the I. C. R., or nearly three times as much. Per passenger, per mile the T. and N. O. was able to get 48 per cent. more than the I. C. R. Up to December 31, 1910, or nine months, the increase in the upkeep of the road, etc., over 1909, was \$332,000, which has been ordered to be paid out of the equipment renewal account, which is taken out of receipts: Rolling stock, \$320,670; estimated receipts, net to end of year, \$690,000. The minister proposes to take out of this amount the loss by fire at Campbellton, \$76,000, and wants to take out \$100,000 over and above the usual equipment account to put in this equipment to renewal account.

No Reason to Fear

Dealing with railway matters in general Mr. Graham said that there was no reason to fear for the future of Canadian railways. They would, he thought, always be able to hold their own in the carrying trade. It was to be remembered that lines running north and south would bring business north as well as take it south, and Canadian lines would get their full share of the east and west traffic. The year 1910, he said, had been the best in the history of Canadian railways.

In reply to a question the minister said that contractors on the mountain section of the G. T. P. estimate that it will take from two to three years to complete the road through the mountains. In the past much delay had been caused by the scarcity of labor, but it was expected that better progress would be made from now on.

"SICK AND ASHAMED"

"If you have tears prepare to shed them now." Picture, if you can, a kind, generous, pleasant knight of the garter, sitting in the Cuban shade, puffing at a Havana cigar, and listening to the passing trains on the Cuban railway, running up the dividends.

An exhausted messenger drops at the knight's feet. "What, ho, varlet?" he cries.

"Sir William," cried the messenger, "the bunch have jumped the corral; your serfs insist upon being allowed to trade horses and cattle and grain with those wicked Yankees; no longer do they recognize the dominance of Sir William Van Horne."

"To horse, post haste!" shouted the gallant knight of the iron steeds, "I am sick and ashamed, and besides I stand to have a crimp taken in my bankroll."

Up from the medieval shades of Cuba to the Twentieth Century brightness of the Dominion of Canada the magnate makes his way. He is met at the station by a bright young newspaperman.

"Well, Sir William," asked the reporter, "what do you know about this reciprocity agreement?"

Sir William turned a sad eye upon him and answered, "I am sick and ashamed—too sick and too ashamed to say anything on the subject." And while the newspaperman sought to recover his equilibrium the knight passed on. So perforce we must draw our own conclusions as to why he was sick and ashamed. But wasn't it a pathetic picture?

And do you blame him for being sick. Like any other absentee landlord, Sir William Van Horne was spending the winter in Cuba, and in his absence the tenants burned up the barns, took the cattle and hogs, kicked over the fences and prepared to sell the whole kit and kaboodle to the Yanks; to the consternation of all true loyalists and to the danger of the entire British Empire. And further what can we be expected to conclude but that Sir William was intensely ashamed that he had himself prejudiced the future of the Empire by using good Canadian money for the development of the southern island?

Sir William may be placed in the same category with Sir Edmund Walker, who uses the deposits in his Canadian banks to develop propositions to the South; Sir William Mackenzie, who uses hard cash, "made in Canada," to run street cars in Rio Janeiro; and numerous others of the most strenuous "flag wavers."

If Sir William Van Horne is truly ashamed, he should, in a true spirit of repentance, cut out his coquetting with Cuba,

Marquis Wheat

THE WHEAT FOR THE WESTERN FARMER

First in Earliness and Yield—equal to Red Fife in Quality. The following are from the reports of the Experimental Farms:

EARLINESS—3 Years' Test

At Brandon, average days maturing—Marquis 110, Red Fife 121.

At Indian Head, average days maturing—Marquis 121, Red Fife 131.

PRODUCTIVENESS—3 Years' Test

At Brandon, average yield per acre—Marquis 45 bushels, Red Fife 40 1-5 bushels.

At Indian Head, average yield per acre—Marquis 40 bushels, Red Fife 34 bushels.

We strongly advise every grower to sow all the Marquis Wheat he can obtain. Every bushel will be wanted for seed next year and the following year at high prices. There is no better investment in sight. Our stock is the genuine, being endorsed by Dr. Chas. E. Saunders. Price, \$4.20 per bushel, bags included. Write us for full descriptive pamphlet.

Red Fife Wheat—The old stand-by of the West. Our stock is from Registered Ancestry and selected. This is the same strain we shipped last season to the Departments of Agriculture of foreign countries, to their great satisfaction. Grow the Genuine, 10 bushels for \$15.50, bags included.

Preston Wheat—Our stock is from seed obtained direct from the Dominion Experimental Farm, Ottawa. Write for price.

White Fife Wheat—Limited quantity.

Durum Wheat—In demand for Central Saskatchewan and Alberta; 10 bushels \$17.00, bags included.

Improved American Banner Oats—"Grown from Registered Seed"—We handle only the one strain. Proof of its merit is clear from the big yields of our customers, and the Government Test of many strains of Banner Oats side by side resulted in this strain heading the list. Buy the Best. 10 bushels \$9.00, bags free.

Garton's Regenerated Abundance Oats—From stock seed obtained direct from Messrs. Garton. 10 bushels for \$8.50, bags free.

Silver King Six-Rowed Barley—This variety headed the list for yield in a test of 64 varieties. It has given us great satisfaction. The sample is thin this year, but the vitality is good. 10 bushels \$10.00, bags included.

Brewer Two-Rowed Barley—Messrs. Garton's introduction. 10 bushels \$14.00, bags included.

Railways give half rates to the Grain Grower.

(Marie Corelli Spencer)

Sweet Peas

Brilliance, Beauty, Sweet Perfume, Profuse, lasting Bloom, in the garden or as cut flower.

We have about 90 varieties, embracing the rarest and most beautiful in the New Spencer and Grandiflora Types. For Home or Exhibition, growing our list is unsurpassable.

A CHANCE TO MAKE MONEY

Yes, elegant Free Homesteads adjoining valuable land, from which very fine bananas are now being sold, can still be had in Mexico, but must have five acres of bananas planted within five years. Address: The Jantha Plantation Co., Block 708, Pittsburgh, Pa.; they will plant and care for your bananas on shares, so you should make a thousand dollars a year. Bananas begin bearing in about fifteen months, bringing the quickest returns of any fruit growing. The climate is delightful and the health conditions good. Should any reader desire to procure a Homestead, apply immediately.

NOTICE TO CORRESPONDENTS

This department of The Guide is maintained especially for the purpose of providing a discussion ground for the readers where they may freely exchange views and derive from each other the benefits of experience and helpful suggestions. Each correspondent should remember that there are hundreds who wish to discuss a problem or offer suggestions. We cannot publish all the immense number of letters received, and ask that each correspondent will keep his letter as short as possible. Every letter must be signed by the name of the writer, though not necessarily for publication. The views of our correspondents are not of necessity those of The Guide. The aim is to make this department of great value to readers, and no letters not of public interest will be published.

EGGS ARE HATCHING

Editor, GUIDE:—The setting of eggs that the Grain Growers placed in the Dominion hen house on the 16th of last December are beginning to hatch out; at least that one (reciprocity) which the "old hen" has been induced to sit on is beginning to chip. The others, I notice, have been placed on the shelf, turned occasionally, and pecked at. This won't hurt at all, as it is impossible to break the shells until such time as the birds come out, full fledged, to take their place in legislation working for the interest of common justice. But what I wish to point out, not only to the readers of The Guide, but to our representatives in Parliament is, that the farmers' delegation to Ottawa on the 16th of December did not approach the liberal party exclusively, nor the conservative party exclusively, but it demanded from the Parliament of Canada relief from the burdens imposed upon the farmers under the protective system which compels the greatest industry in Canada to sell its products on the cheapest market while it insists that it must purchase its necessities on the dearest. Under the present system, competition for the purchase of agricultural products is almost entirely eliminated. There is but one customer, Great Britain, and so far as the West is concerned his agent is domiciled in Winnipeg. There is but one outlet, that is through Winnipeg via Fort William or Port Arthur. It is easy to see why the Winnipeg Board of Trade and the Winnipeg Grain Exchange voted against reciprocity. It is easy to see why the milling industry of Canada is adverse to reciprocity. Reciprocity means a competitor for the purchase of our wheat, stock, etc. Are the farmers of the West still desirous of playing into the hands of the Winnipeg Grain Exchange, the elevator combine, the Ogilvie Milling Co., and the huge packing industries; none of whom would have the slightest compunction in selling the products of our farms on the Liverpool market at a fraction of what it costs us, our wives and families to produce, so long as Winnipeg took the toll? This is not a party question. This is a matter which affects the prosperity of Canada as a whole. It will inflict no injustice upon the manufacturer. In opening a wider market for farm products it will incidentally enlarge the market—the field of operations—for the manufacturers, by giving a stimulus to agriculture, and encouragement to immigration. The placing of limitations through personal selfishness is the curse of human progress. So long as the system of protection is adhered to, so long will progress be retarded, and injustice perpetrated. We demand freedom. Who are some of our M.P.s representing at the present time? Are they representing those who elected them to office? Are they supporting party for personal or selfish ends? Or, are they flat-footed for special privilege? What does the system of "pairing" votes in the House stand for? How are the electors to know on which side their member stood? It behoves our M.P.s to think seriously before they vote against the wishes of the farmers as expressed on the 16th of last December in no unmistakable terms at great expenditure of time and money. Neither are the farmers standing alone, the mass of the people are with them. Every member from the West, including Winnipeg, sitting in the House of Commons, represents the agricultural industry. Are they giving expression to their private,

personal opinion, or are they responding to the wishes of the people whom they have the honor to represent, if they do represent. What is this bill before the House? What does it call for? Merely the right to exchange certain commodities if such exchange is to the advantage of either or both parties concerned. There is no compulsion about it. The tariff is practically untouched. While the farmers and the great body of consumers continue (under protest) to pay tribute to a privileged class, are we also to be denied the right to seek a wider market for Canada's greatest industry, to the benefit of the whole Dominion? How long shall we continue to pay tribute to a privileged class? Until our representatives chuck party and personal interest and work for the policy of the greatest good to the greatest number. No M. P. is asked to vote against his conscience, but, before he votes against his constituency, he should be called upon to resign his seat and not violate the confidence of his supporters.

W. S. FITZGERALD.

AGREEMENT WILL HELP

Editor, GUIDE:—Kindly permit me to voice a little of my opinion on Reciprocity through your valuable paper. Has there not been a little hard feeling going on for some years now between Canada and the United States through the tariff wall

TO AGENTS AND SECRETARIES

A large number of our friends throughout the country, who send us subscriptions, very often ask that back numbers be sent to new subscribers.

It is advisable not to promise any old numbers when soliciting subscriptions, as each week's issue is completely used up within a few days of publication.

Attention to this will save quite a lot of correspondence and disappointments. Subscriptions will be dated from the day they reach our office.

being built so high? With the tariff removed will it not tend to create a better feeling both politically and commercially? Why shouldn't we be at peace with our neighbors or are we scared of this bunkum talk of annexation? Surely to goodness we have enough British blood in Canada to see to that part of it. Champ Clark gave the "privileged" interests a splendid axe to wield when he spoke on annexation, and haven't they used it to perfection? So far as the privileged interests are concerned they are diametrically opposed to the farmers. The issue is practically between the privileged interests and the farmers, and the interests are backed up by such men as Hon. Sifton, the man who voiced his own opinions on the floor of the House and not of those who put him there. He is an out and out traitor to his own constituency and the farmers of his own constituency are proving it by the resolutions they are sending in to Ottawa. Did we send our representatives to Ottawa for the fun of the thing? No, we wanted economic freedom in the selling of our produce in an open market and an extension of the British Preference. I believe that a fair and liberal reciprocity treaty would further the development of our natural resources and would encourage friendly relations between Canada and the States, and it is up to the different branches of the Grain Growers' Association to frame resolutions in favor of the reciprocity agreement and get them in to their representatives at Ottawa. With all due respect to Mr. Frank Gates, who states in The Guide of March 1 that free trade and all that goes with it is a joke.

He refers to England. Can he tell us why it is that the 1910 trade returns show an increase of over \$590,000,000, over 1909? I think that if Mr. Gates will approach the conditions of the farmers of England, especially of the eastern counties with an unbiased mind and drop his party views he will find that their difficulties are not through free trade but mostly through landed interests.

ARCHIBALD MATTHEWS.
Oakburn, Man.

MR. FOSTER'S ARTICLE

Editor, GUIDE:—Can you spare me a little space to comment on an article by Mr. Foster, in the Canadian Century of February 4? Mr. Foster says, "The farmer worships wheat and is its wholesale producer. He found the prairies ready for him; surveyed, opened up, fit for the plow. He paid his fee of \$10 and straightway entered into possession of 160 acres of the best land in the world. Did anyone anywhere, in any age of the world come into so ready, so inexpensive and so valuable a heritage? Who provided it? The state. Multiply the acres he possesses and the present-day valuation per acre and you will find that he owns in land capital alone an enormous endowment running in value from \$4,000 to \$12,000—all this practically a free gift from the state." Now, my brother homesteaders, I would like to ask you, who is the state? Is it Mr. Foster & Co.? Is it parliament in Ottawa? Can't be—they call themselves servants of the state. Who then is the state that gave you this free gift? Further, Mr. Foster says, "All the grain grower had to do was to sow his seed and harvest his crop. Earth, air and sunshine, all untaxed, did the rest." Easy, isn't it? All you have to do is to ask Mr. Foster or the so-called "state" to make you a gift of an outfit of machinery worth \$1,000 for a start; 4 horses for about \$1,200; building material, about \$1,000; and an extra endowment of \$500 to live on till earth, air and sunshine do the rest. But that is not all to make you happy. Mr. Foster says, "When the grain grower went thither from older Canada, the United States, Great Britain and elsewhere, he made the journey in comfortable trains with his family and his belongings. He found transportation available to take out to market whatever he raised. He found the telegraph, the telephone, the post-office, and the mail carrier. Who first provided these and now maintains them?"

taken place on the subject, and still an agreement does not appear in prospect for the very near future. It has struck me as rather remarkable that so many prominent, and wise and thoughtful men, whose opinions, if genuine, should be anything on this matter, are so different and varied. I have at last come to the conclusion, and I believe there are many who think as I do in this matter, that many of the opinions expressed are not genuine, by any means, but are simply the expression of selfish and party interests. In our nation's parliaments we find the question is not being debated on its merits at all, but almost strictly on party lines. The liberals in most cases are supporting the measure because it is a liberal proposition, and for that very reason the opposition members are opposing the measure almost to a man. It seems to me a matter of much regret that our members of parliament are not men with sufficient independence about them to consider such an important matter as this reciprocity question without being dominated and influenced by the party spirit.

The fair-minded man knows very well that freer trade relations with the United States would render the greatest good to the greatest number. On the whole there is nothing to lose and all to gain. As a farmer, I do not think for one minute that free exchange in farm products is going to enhance the price of our wheat and other cereals to any great extent, for so long as the United States and Canada are exporting countries, grain values will be based very much on export values and the foreign markets. But there is one thing very evident, that it will give the Canadian farmer a much wider market for his products, and will have a tendency to keep prices normal on both sides of the line. There will no doubt be times in the future, as has often been the case in the past, when some of the big grain interests in the United States will sell "short" and at such times as those Canada might reap some benefit, but we think where the greatest benefit will accrue will be in the inaugurating of a sample market which will surely result should the proposed measure become law. Is not the city of Minneapolis the greatest milling centre in the world? If I am not mistaken I believe it is such. There they have a sample market second to none in existence, where wheat is bought and sold on its milling qualities, not particularly on grade. The writer has personally visited the big mills in Minneapolis, and also the Grain Exchange, and can state for a fact that Canadian No. 2 and No. 3 Nor. wheat will compare favorably with the wheat that is bought, sold and milled as No. 1 in the big mills of that city. There will often be seasons when the northern grown hard wheat will sell at a premium in the United States. Therefore, what have we as Canadian farmers to fear from the reciprocity treaty?

THOS. E. ALLCOCK.

FREE TRADE BENEFITS ENGLAND

Editor, GUIDE:—With your kind permission I would like to ask Mr. Gates if he really thinks, as he implies he does, that under protection the farmers pay no taxes and that under free trade they would? Does he not know that under either free trade or protection the government would need just the same revenue, and it's an undisputed fact that under protection the government gets only one dollar revenue for every two or three dollars that the manufacturers get, so that a farmer does not necessarily have to be a Solomon to know which is the better for the country as a whole, i.e. for the majority of its inhabitants. To proceed to the home market argument. What greater market can a farmer wish for than one such as the English farmers enjoy; probably the steadiest market in the world and built up under free trade? Taxes, of course, are high in England, and would be so under either free trade or protection, because of its big debt and naval and military expenses.

Another point regarding free trade is this, the manufacturers in highly protected America are, and have been for some time, quite slack, in fact some of the plants of the U. S. Steel Co. have been running only five out of eleven blast furnaces all winter, and are only just now beginning to pick up a little, whereas free trade England has just completed the best year's trade she has ever done. Just think of it, you protectionists, an increase last year on the total imports and exports

The state." Now don't grumble any more if you found all this provided for you by the state. Did the C. P. R. bring you out here for nothing in their comfortable trains? Why not? They got a free gift from the state of 18,000,000 acres worth \$315,000,000, besides \$25,000,000 in cash. What made the C. P. R. land worth that much? What made Mr. Foster's land holdings in the West worth that much? Why, earth, air and sunshine, that's all. You think you have to have rain. Mr. Foster don't even need that. Now, my brother homesteader, you are the luckiest man in the world. Put your faith in Mr. Foster and the so-called "state" and you will be happy forever.

H. WILLNER.
Davidson, Sask.

PACT MEANS SAMPLE MARKET

Editor, GUIDE:—Just at present, while the proposed reciprocity agreement is being so carefully considered and debated on by almost every organization and political body in both the United States and Canada, possibly a few remarks from a farmer along this line will not be considered amiss. Having followed this matter rather closely for the past two months, I cannot help but have an opinion on the question. Much has been spoken and written on this very important issue, and we still seem to be about as far from a decision as when the negotiations for better trade relations with our neighbors to the south of us were first undertaken. Men sitting in the high places in our land have expressed their opinions on the matter, long and wearisome debates have

of some \$600,000,000; an increase, mind you, nearly if not quite as great as Canada's total imports and exports, and England buys nearly all her raw materials and most of her food supplies. I should also like to refer, if it is not too late, to Mr. Russell's article in the December issue of the Farmer's Magazine, "Why a Tariff?" It seems to me that most of his arguments furnish very good reasons why the tariff should be reduced, not kept as it is or increased. He calls attention to the continually growing home markets and says we are importing food stuffs and agricultural products, including over 7,000,000 pounds of wool and 300,000 carcasses of mutton. Just so, Mr. Russell, owing to the high cost of fencing and of help it's not a very good paying proposition to keep sheep and then be offered 6 or 7 cents for wool; even last year most wool around here was sold for 10 cents. Mr. Russell is surely ignorant if he thinks that free trade is responsible for the trust known as the Imperial Tobacco Company, the duty on tobacco in England being, I think, higher than in Canada. Mr. Russell does not present a single sound argument in all his article. He implies that the manufacturers do not sell implements abroad cheaper than they do at home, but Mr. Waddie, president of the Canadian Drawn Steel Co., says they do and are enabled to do so by the tariff, i.e. they get a rebate of the duty on raw material entering into the manufacture of the article they export. Therefore, Mr. Waddie, if the tariff was off altogether they could sell cheaper at home as well as abroad. As Mr. Waddie truly says, "Selfishness is at the bottom of it all." All that the farmers ask for is that taxes should be paid by all according to their respective abilities, and such a condition can never be attained under protection. Of course it's admitted that free trade cannot be brought to pass within one or even two years, but this reciprocity treaty makes a very fair beginning, and the extension of the preference to England would carry matters still farther. It must not be overlooked that a nation cannot become wealthy except it has a continually growing and expanding foreign trade. There is much more one might say, but every farmer can answer these arguments for himself, for the farmers are not so easily fooled as these men seem to think, a fact which was fully demonstrated lately in Ottawa and which will be emphasized many times before people are made to understand that the West belongs to the farmer.

THOMAS F. ROBERTS.

Lacombe, Alta.

RECIPROCAL DEMURRAGE

Editor, Guide:—I wish to make your readers acquainted with the condition that obtains at shipping points on the Canadian Northern Railway in Manitoba. I live at a point which necessitates an average haul of five miles in shipping my grain via Oakburn, C.N.R., or an average of ten miles to Shoal Lake, C.P.R. Today the buyer for the G.G.G. Co. at Oakburn informs me that he is not allowed to give within three cents per bushel for oats at the former point of what he may give at the latter. Or in other words, oats are worth three cents per bushel more on the C.P. than they are on the C.N., the reason being that there is no reasonable certainty as to time of shipments being delivered by C.N. Two weeks ago I got an order for a car of seed oats to a point in Southern Manitoba, and a few days later a cancellation by wire, simply because if shipped by C.N. there was no certainty of the oats being delivered before seeding. Now, this is a serious matter to all the farmers as those who have oats are anxious to sell, and those unfortunate ones who through reasons of drought last summer must purchase seed and feed, are not in a position to do so at the best advantage. Of course, the railway will talk of storms, etc., delaying shipments. No storm hits the railroad that does not equally, or worse, hit the farmer, and, so far as I can see, it is simply a question of a little expense in keeping a sufficiency of engines and snowplows at work to keep traffic open, as whenever the snowplow comes it gets through and traffic is again open. But what of the fact that cars, lots of them,

will be standing in out of the way places, where they cannot be loaded, for days and weeks, and engines passing by repeatedly without cars being spotted either at platform or elevator? The other day a conductor of a freight claimed he was short of coal and this was his reason for not spotting cars. A farmer who has for sale around 20,000 bushels, at a discount of 3 cents per bushel for being on the C.N., will be at a loss of \$600, or enough to plow the land once at least. What is the use of a road that only wants to do business in the summer time when the farmer must be farming if he is to make anything? Farmers, take warning, and strain every muscle and every nerve to keep the H.B. road clear of this kind of thing. See to it, once and all the time, that the H.B. road at least shall be for the service of the public, and not for the dividend makers, who work only for their own pocket. Meanwhile I would suggest "reciprocity in demurrage" as a sovereign remedy for the contemptuous neglect meted out to the farmer at some shipping points. If the farmer is taxed for taking over 24 hours filling a car for the benefit of the railway company, why should not the railway company be taxed for repeatedly neglecting to supply the farmer or any other shipper with cars when any number of cars are visible, empty and loaded for days and even weeks at a time? The only way to make a corporation "which has no soul" feel that it is in the wrong is to ever so slightly reduce its profit and it will very suddenly wake up to someone's else satisfaction besides its own. Let "reciprocity in demurrage" in some form be agitated for our next convention, and let everyone who is suffering from such neglect as I mention at the hands of the railroads make it a point to do all he can to expose their shortcomings in delay of cars or shipments of grain.

F. SIMPSON.

Shoal Lake P.O.

SASKATCHEWAN ELEVATOR PROBLEM

Editor, Guide:—I have read with interest Mr. Partridge's article on page 9 of The Guide of March 8. I must take exception to Mr. Partridge's final remarks regarding the proposed Saskatchewan co-operative elevators and the Grain Growers' Grain Co. My idea (and I should like to see the matter discussed in your columns) is that these elevators will be a collecting agency for the Grain Growers' Grain Co. and distributing points for the lumber, cement, coal, machinery, etc., etc., that the Grain Growers' Grain Co. would supply at wholesale prices.

About 60 per cent. of the farmers here are shareholders in the Grain Growers' Grain Co. and are unanimous in their approval of the proposed elevator scheme. In previous articles in The Guide Mr. Partridge has talked co-operation; why should he be against this part of it?

I have an open mind on this elevator question, but I think that the offer of the Saskatchewan government has not been equalled in the world's history. I may say I have no party leanings one way or the other.

ALAN B. MUDIE.

THE MANUFACTURERS' ADVICE

Editor, Guide:—I have seen by The Guide and other papers that the manufacturers have placed their memorial before Sir Wilfrid Laurier and parliament in protest against the reciprocity agreement. In reading their reasons therefor all true men can see the fidelity to self interest therein. Now, they are very solicitous for the welfare of the farmer, but the farmer is not deceived. A farmer naturally wants to sell where he can get the highest price, in the United States or any other country, and it is not very clear that because I sell my neighbor something that I have raised, that that neighbor must inevitably annex my farm to boot.

I have been farming in Canada nearly forty years, in Ontario mostly, but lately in the West, and I think in that time I have gained some knowledge of my business. It is amusing to hear men telling me how to farm for profit who mostly likely never raised a carrot in their lives, and telling me that I am mining not farming the land,

which I am compelled to admit is the case in many instances. But this is just another cause and effect. If the farming community got their just dues they would be in a better position to farm, not mine. As it has been, the farmer is making progress.

GAVIN NEILSON.

Craig, Sask.

A CORRECTION

Editor, Guide:—In a recent issue of The Guide I notice a letter of mine in which you make me responsible for some quite startling statements. In effect you make me say that by the manipulation of the Saskatchewan Valley Land Co., and the manner in which the railway which is not the H. B. R., is being built, that the road from Winnipeg to the Pas is being made to cost the settlers on the H. B. land grant \$100,000,000. Now, what I did say was that the road from Winnipeg to the Pas was being made to cost the settlers on these H. B. R. Land Grant lands in particular, and the people of Manitoba in general, one mile with another, better than \$100,000 a mile. This statement is based on three sources of information; first, the railway year book for 1908-1909; second, the prospectus of the Saskatchewan Valley and Manitoba Land Co., and uncontradicted press reports which have passed current for years past. This for a railway that is neither built nor equipped should suit the most fastidious.

Glen Souris, Ont. S. THOMSON.

PLEDGING CANDIDATES

Editor, Guide:—It is said that mistakes should be reminders of our liability to err again. I trust that any reference to past errors will not be taken as a disposition to fault finding. I consider the resolution adopting the pledging of the old party candidates as the political policy of the G. G. A. was a mistake. It is true that Mr. Kennedy advocated the policy, but I think that other correspondents fully pointed out its weakness. "No man can serve two masters," and we can surmise which master the doubly pledged man would cleave to. Any precedent I have heard of is considered a disgraceful affair. However, the subject is up for

District Convention at Stettler

The first district convention of the U.F.A. was held in Stettler on Tuesday afternoon, March 14, when nearly 150 members from the unions in the Stettler constituency assembled to take up the matter of more effective organization work. Delegates were present from Stettler, Erskine, South Buffalo Lake, Prairie Center, Maple Leaf, Lake Side, Ewing, Union Hall, Botha, Gadsby, Halkirk, Gopher Head, Cornucopia, Red Willow, Lowden Lake, Wessington, Castor and some other unions, and the meeting was presided over by T. H. Adair, president of the Stettler union.

The chairman said that the meeting had been called for the purpose of devising ways and means for improving the work of the U.F.A. and stated that before this was taken up addresses would be delivered by Mayor Grigg of Stettler, Vice-President Tregillus, who would talk on Direct Legislation, and Secretary Fream, who would take up the general work of the Association.

Mayor Grigg said it gave him great pleasure to welcome the farmers to Stettler and he was glad to see that they were organizing. The farmers should have as strong an organization as any other body but past experience had shown that it was hard to keep them together. No doubt one of the reasons of this was the isolated condition of the farmer and the fact that it was not always possible for him to leave his home to attend meetings. There never was a time in the history of the country when farmers' organizations should count for more than at the present time. The speaker outlined how this was to become one of the best mixed farming provinces in the Dominion and stated that, no doubt, many of the problems which affected the farmer and which would bear materially upon the welfare and prosperity of the country as a whole would be considered by this association, mentioning the Hudson's Bay Railway which was destined to place us in closer touch with the Eastern markets than the present routes. He was strongly in favor of reciprocity, it being only right that farmers and others should have the opportunity to sell and to buy in the best markets in the world. Unfortunately too much politics had been allowed to appear on the surface, and possibly underneath also, in the discussion of this agreement, but if those opposed to the agreement would only sit down and figure the matter out a great deal of the opposition would disappear. He closed by again welcoming the delegates to Stettler and assuring them that the town would be only too pleased to assist them in any way possible. The chairman, on behalf of the delegates, thanked Mayor Grigg for his hearty welcome and assured him that the members of Stettler union appreciated the assistance which the members of the council of Stettler were always ready to give them.

Convention Idea Good

W. J. Tregillus said the district convention idea was a good one. A step is required between the ordinary unions and the large annual convention; some place where ideas can be formulated and where the different matters can be better threshed out. This will necessarily relieve a great deal of the strain from the annual convention. He then took up in detail the subject of Direct Legislation and explained what the Initiative, Referendum and Recall really meant, taking up each question separately and showing how it could be put into operation in the matters on which the farmers were interested. He answered many questions and his address was listened to with a great deal of interest.

E. J. Fream took up the work of the U.F.A., showing what had been accomplished and what was required in order to make the work more effective. He took up several of the more important questions, such as reciprocity, the terminal elevators, and other matters and

explained them as far as possible, answering several questions relating to the work of the Association.

K. J. Lincoln said he thought it would be a good idea for the convention to take up the reciprocity question at the present time, as it might possibly be that several of the delegates would have to leave before the convention adjourned, and it would be as well for the matter to be taken up and an expression of opinion received when there was the largest possible representation. He then moved, seconded by Mr. Morland, that this subject be now considered. This resolution was adopted.

Reciprocity Resolution

After some discussion, Mr. Lincoln moved and Mr. Raymond seconded:—"That we the delegates of the United Farmers of Alberta in the Stettler electoral district in convention assembled this fourteenth day of March, 1911, do hereby place ourselves on record as being unanimously in favor of the reciprocity pact and do demand that same be made effective at once. Further, that a tele-

Main St., Banff, Alta., with Cascade Mts. in the background

gram to this effect be forwarded to the Hon. W. S. Fielding, minister of finance."

The resolution was put to the meeting and was carried by a standing vote and with great cheers, not one delegate expressing himself as being opposed to same.

Mr. Lincoln said one of the great troubles with the U.F.A. in the past was that a few officers would be elected and the lay members would remain inactive. It behooved every member to become active and to take up the organization work. He suggested also that the unions in the Stettler constituency should be centralized and a strong working committee appointed to look after the many matters of importance, also to assist in the organization work.

It was moved and seconded that E. E. Ullman, of Harker, be authorized to take up the organization work in the Harker district. Carried.

Mr. Cochrane suggested that it would be a good plan to appoint committees from the various locals to arrange organization districts.

A delegate from Castor handed in the names of several farmers in his district who were greatly interested in the Association and who wished information regarding same.

It was then moved and seconded, and carried, that divisions be made of the electoral district and that the members present appoint responsible organizers to take up the work in these districts.

It was further moved and seconded, and carried, that a committee be appointed to divide the electoral district into separate territories for the purpose of organization work.

The chairman nominated Messrs. Lincoln, Buckingham, Flack, McMahon, Ragan, Stanfield, Ullman, Ferguson and Barnett as the committee for this work.

The committee adjourned to prepare a report and while they were absent stirring speeches on different questions of the day were made by Messrs. Cochrane, Thomas, Lincoln and Raymond, and all spoke strongly on the question of reciprocity and the stand of some of the so-called public men on this question.

The committee then presented the following report:—"We recommend that the Stettler constituency be divided for organization purposes into the following districts:—

"Red Willow and Harker district, being all that part north of township 39, east of range 23 and west of range 16.

"Erskine district, all that part from the west boundary of the district to the east side of range 20, and as far south as it was possible to reach.

"Stettler district, all that part south from township 40, east of range 20 and west of range 17, as far south as possible to reach.

"Gadsby and Halkirk district, north and south between ranges 14 and 18, as far south as township 36.

"Cornucopia district, south from township 36 as far as possible to reach, east of range 18 and west of range 13.

"Castor district, all east of range 15 as far as possible to reach, with a recommendation that further districts east of Castor be organized as soon as unions were established there."

The committee further recommended that although these lines were suggested it was not to be considered as a hard and fast rule but that any organizers appointed should be at liberty to spread over as much territory as possible in spreading the work of the Association. Further that the committee should be empowered to take up any district work and carry out any suggestions for the good of the Association which may be conveyed to them. The report was unanimously accepted by the convention.

District Organizers

The following organizers were then appointed for these districts:—

Red Willow and Harker: E. E. Ullman, Harker; Mr. Flack, Red Willow. Erskine: Messrs. F. S. Arnold and J. Barnett, both of Erskine. Stettler: T. H. Adair, Stettler; Mr. Thomas, Zenith.

Gadsby and Halkirk: This was combined with the Stettler district.

Cornucopia: Mr. Miller, Wolk Hill; Leroy Hyney, Lillico; C. Stanfield, Garden Plains.

Castor: It was decided that the Castor members should nominate their representatives at as early a date as possible.

J. M. Johnson spoke on the value of organization and of the great need for the farmers to get together if they were to accomplish what they were after.

Mr. Lincoln moved and Mr. Buckingham seconded, and the resolution was unanimously adopted:—"That the organization committee as nominated be a permanent committee for the Stettler district to take up not only the organization work of the district but also to arrange for any other work, such as a district convention and the general welfare of the U.F.A. Further that the committee have power to add to their number in so far as they may see fit to carry on their work."

Favor Direct Legislation

Mr. Raymond moved and Mr. Lincoln seconded, and it was unanimously adopted:—"That this convention of delegates from the Stettler electoral district do hereby place on record our demand for Direct Legislation and we pledge ourselves, both individually and collectively, to do everything possible to secure the necessary legislation upon the statute books. We also recommend that every effort be made to pledge any and all candidates for public office to this most necessary step in advance for legislation of, for and by the people."

Mr. Morland moved and Mr. Lincoln

seconded: "That a hearty vote of thanks be tendered to the mayor and citizens of Stettler for their hearty welcome to this convention." Carried.

The chairman invited all delegates to a basket social which the members of Stettler union had arranged for that evening, and the convention then adjourned, every one present being satisfied that an extra good day's work had been done in furthering the cause of the U.F.A.

Official Circular No. 3, 1911

I beg to advise you that after March 25 next the office will be located at Room No. 608, Leeson & Lineham Block, Calgary. Kindly, therefore, make a note of this address, and address your correspondence there after that date. This office is located in the central part of Calgary, and all members of the U.F.A., and in fact anyone interested in the work of the association, are invited to call there when they happen to be in Calgary. We want it understood that after this permanent office is established it will at all times be at the disposal of the members, and we want them to make use of it at every opportunity.

Seed Grain Advances

As you are aware, our president, Jas. Bower, is in Ottawa and acting in his official capacity of president of the Canadian Council of Agriculture, looking after the interests of the farmers generally. One of the points he took up upon his arrival there was the question of seed grain advances to the farmers, and the following answer has been received from him:

"I have interviewed Hon. Mr. Oliver, minister of the interior, as to seed grain, and he says that applications are to be received by the commissioner of immigration, Winnipeg, from parties who held homestead entry previous to July 1, 1911. The application forms are in the hands of all postmasters, merchants, justices of the peace, mounted police, and any other parties who would be likely to come in contact with the settler. These applications, after being received, are verified at the Dominion land office as to entry. The statement of the settler asking for seed grain as to his acreage ready for crop is also investigated. The seed grain is distributed at railway points most convenient to the location of the settlers. In addition to the immigration officers, seven homestead inspectors are engaged in the distribution of the grain. The lien covering the quantity of grain secured is signed by the applicant upon delivery of the grain, and these are registered in the land titles office against the land. After the distribution has taken place a report is made to the department giving in detail the distribution. "The bulk of the grain is purchased from large dealers, but in some localities where the crop has not been an entire failure, orders are given the farmer seeking relief on one of his neighbors who may have a quantity of suitable seed for sale. At first it was anticipated that \$100,000 would cover the case, but later investigation has shown that the amount required will be \$225,000."

This applies only to those who have not received their patent, and, of course, is not going to benefit a large number of farmers who are greatly in need of assistance. It is hoped even yet, however, that something might be done in this direction by the provincial government, but so far no word has been received in regard to same. The chance of relief is not very great, but if word of any kind is received it will be forwarded to all members at once.

I am sorry that this is all the information I can supply on this most important subject at the present time, but if any members require anything taken up in regard to same kindly let me know and the matter will be promptly attended to.

One member has written me that he has a quantity of farm machinery for sale, while another member has a complete outfit of gasoline engine, separator and steam plows which he will dispose of. These names will be given to anyone interested who may write me in the matter.

Organization

Many new unions are being organized, and it truly seems that the electric spark has taken effect. From all parts of the country the greatest enthusiasm is being displayed, and the officers and organizers are receiving every encouragement. The organization campaign reports are also coming in, and many valuable suggestions are being received. Some of them are passed on for your consideration.

One union writes: "We had membership cards printed, and at each meeting we ask for volunteers to take cards for securing new members. The cards are handed out in bunches of five with the local secretary's

signature attached, so that the hustlers can deliver the card when the fee is collected. The tickets are charged up to the members when they take them, and they are credited again when they return either the cash or the tickets. In this way more new members have been secured since the first meeting in January this year than ever before, one member having already turned in ten names and now being out with his third bunch of tickets. We would suggest, however, that some nice buttons be made to be inscribed "U.F.A. HUSTLER," and we would buy one for presentation to the member who had secured the most new names, and to be worn by him till the next meeting or until some other member secures more new members than he has, when it will be delivered to the other man, and so on until the end of the year. The member who has worn the button the most months out of the year to be entitled to keep it when the year closes, and a new button to be secured for the next year's competition. In addition to this, leave it to each local union to get a new union organized in the nearest territory to them where one should be organized. Let them take it up at the first meeting and decide which of their members are best qualified to go out in the new territory and canvass for membership, also arrange a date and place of meeting. When the meeting is arranged, if the member feels that he requires assistance, let him get the president or secretary of the local union of which he is a member, or both of them, and if necessary the director for the district also, to assist in getting this new union organized. The solicitor could be paid by the day, as the regular organizers are paid, but it would save practically all the travelling expense, which has been the greatest source of expense in the past. If this plan is followed up by each union that is alive we will roll up a great membership before the year is out. You could learn in your next circular letter how many unions would agree to buy the Hustler's buttons at say one dollar each, and by getting a goodly number of them you would be prepared to supply them as required."

Campaign Suggestions

That is what one union suggests. What do you think of the proposition presented there? It certainly has the right kind of energy, and we would like to hear further regarding same from the other unions. If there is a sufficient response, the hustler's button will be secured. Another sends in the suggestion that the temperance "Catch My Pal" idea, which is working so successfully in the Old Country, should be adopted. The next suggestion is that good doggers and cartoons should be prepared with statements showing the benefits, even in dollars and cents, which the farmers have derived through the Western associations. The next is the discussion of local questions at the meetings and the co-operative buying and selling of goods and supplies. For every union to discuss Direct Legislation one month, single tax the next, then government ownership of elevators, woman's suffrage, abolition of senate, free trade, tree planting, in the succeeding months, with a general summary at the end of the year, is another suggestion received. For some set topic to be discussed at each meeting, all the unions to discuss the same subject during the same month and report the debate to the general secretary. The division of the province into districts with an organization committee in each. Educate, Organize, Boost. That it would make the union more attractive to have picture post cards issued with subjects of interest to farmers (pictures of our officials, etc.), to be used in sending out notices. More educational work should be attempted. It would hold the members better if there was some definite system or program to follow for discussion at the meetings. It seems easy enough to get sufficient enthusiasm to organize, but the routine business is not sufficiently interesting to induce everyone to turn out after a day's work, and it is hard for the officers to try to make things attractive enough, especially as many of the members cannot be induced to speak at the meetings. If the executive could draw up some course of study dealing with the chief topics of interest, it would help. A meeting place in the various market towns where members can have a book and put down what they have for sale and require. Appointing standing committees, such as credentials of new members, press committee, finance committee, order committee, sick committee. These are not anything like all the suggestions which have been received, but will tend to open up the discussion further, so that we shall be able to have the best possible system of organization effected here. I hope indeed that these suggestions will be discussed and that many answers to same will be received. We want the best and can only get it by getting together on these subjects.

Reciprocity Agreement

Many splendid responses have been received to the special circular sent out which dealt with the reciprocity agreement, and the result is that numerous telegrams have been sent to Ottawa endorsing the agreement. The members can do more than that, however. Although some think we should do nothing for the reason that the agreement does not go far enough, yet the majority will agree that it will be better for us to take what we can get and to keep on digging away for the balance afterwards. A great deal of assistance will be given to this project if the members will write letters to their members, requesting that they will support and vote for the agreement.

Terminal Elevators

This important question is not yet settled and further assistance can be given along the lines as suggested above. Let the members write to Ottawa, requesting their representatives to work and vote for the government ownership and operation of all terminals and for the speedy erection of terminal facilities at the Pacific coast. In this connection I might state that a letter has been forwarded to all members of parliament by the association, asking for their support to this proposition.

Pork Packing Question

This subject is still very much alive, and in accordance with instructions received from the committee a special circular dealing only with this subject will be issued in the course of the next few days.

Hudson's Bay Railway

You will probably have noticed that the announcement has at last been made that the government will proceed with the construction of the Hudson's Bay Railway, and that the supplementary estimates will include the amount required to carry on this work. This is another evidence of the victory gained by the organized farmers, and we must not now lose sight of the fact that the matter of operation of this railway has been left in abeyance.

Other matter will be presented to you in the next circular, and with the speedy opening of the central office we hope to be more than ever at your disposal in carrying on work of interest and moment to the U.F.A. Thanking you in anticipation of your active co-operation.

Your obedient servant,
EDWARD J. FREEMAN, Sec'y.
Innisfail, Alta.

HUSTLING HUGHENDEN

Another good live union has been organized by G. W. Johnson, district organizer in the Provost district, at Hughenden, where twenty-six signed the membership roll on March 3. One of the first matters attended to by the new union was that of sending a telegram to the Hon. W. S. Fielding, strongly endorsing the reciprocity agreement. The first officers elected in this union are: President, Jas. Allen, Hughenden; secretary-treasurer, J. A. Macgregor, Hughenden.

ENDORSED RECIPROCITY

Orton Union is keeping busy and at the last two meetings considerable work has been transacted. The members of Orton Union would like an expression of opinion from other members as to the advisability of rejecting applications from others than farmers, or other information as to their being accepted. A telegram was sent to the Hon. W. S. Fielding, minister of finance, strongly endorsing the reciprocity agreement, and urging that every effort be used to make it law.

J. T. DERRICOTT, Sec'y.
Orton, Alta.

SUCCESSFUL ENTERTAINMENT

The concert and dance which was held in the Massey hall, Islay, under the auspices of Islay Union No. 198 of the U.F.A., on February 18, was a decided success, financially and otherwise. A short business meeting was also held and future meetings were arranged for.

DON. GILCHRIST, Sec'y.
Islay, Alta.

TEPEE LAKE MEETING

The last regular meeting of Tepee Lake Union was held at W. J. Barber's residence. It was decided that this union would co-operate with Blackfoot Union in the purchase of formalin. A splendid concert was rendered, after which refreshments were passed around, and the meeting then adjourned.

H. KING, Sec'y.
Earlie, Alta.

VEGREVILLE OFFICERS

The regular meeting of Vegreville local union No. 4 was held in the Farmers' hall on Saturday, February 25, it having been the first fine meeting day this winter. As a consequence the meeting was well attended, the hall being comfortably filled. The result of the election of officers for the ensuing year was that the captain this year is H. McClerry, and the mate E. J. Sandercock. The crew are: H. Debus, Sr.; F. O. Richardson, W. A. Jones, A. Howman, P. Biemer and O. J. Johnson, while the man at the helm is Thos. Balaam. The secretary also received instructions to write to our member in the Dominion house expressing the views of the farmers of this district that he has got to stand by the resolutions presented by the Ottawa delegation. The secretary presented a report of the year's work, which was considered very satisfactory. It is a lamentable fact that a large number of our members do not take the official organ, the Grain Growers' Guide. There is an excuse for some, as they cannot read English, but those who can should cough up the almighty dollar for their own welfare sake. Compulsory hall insurance will once more be the topic for discussion at our next meeting, which will be held on March 11 at two o'clock.

THOS. BALAAM, Sec'y.
Vegreville, Alta.

IMPRESSED WITH CONVENTION

We had a fairly well attended meeting of Onoway Union on Saturday, February 25, when one new member was secured. We want to organize another union at Pine Ridge, and are sending a deputation of our members to assist the farmers of that district to join the ranks of the U.F.A. Mr. Jas. Priestly gave us an account of the convention at which he was a delegate. He was greatly impressed with the intelligence of the farmers in attendance, and paid a glowing tribute to the members of the executive.

A. A. BROWN, Sec'y.
Onoway, Alta.

RED WILLOW ORGANIZED

A meeting of farmers was held in the Red Willow school house on February 28 for the purpose of forming a local union of the U.F.A. T. H. Adair, district organizer, addressed the meeting on organization work. The officers elected are as follows: President, S. Flack; vice-president, Thos. Baird; secretary-treasurer, T. O. Barrett; directors, Messrs. Jas. A. Baird, D. J. McKay, E. J. Wells, Chas. Dennis, Wm. Matier; auditor, Mr. J. Walker. Twenty-one members joined at this meeting and there will be many more at an early date.

T. C. BARRETT, Sec'y.
Red Willow, Alta.

WHICH WAY ARE YOU PAYING FOR AN IHC GASOLINE ENGINE?

THERE are two ways—a quick, easy way and a long, costly way.

The first way is to go to the I H C local dealer, pick out the style and size suited to your needs—pay for it—take it home and set it to work. It will operate your cream separator, feed grinder, thresher, fanning mill, turn your grindstone, saw wood, etc.

The other way is to get along as best you can without it, and pay for it over and over again in the time and money you lose by not having it.

"Procrastination is the thief of time," and time is money. An I H C Engine saves time—saves money. It's an investment that pays big dividends, day after day, year in and year out, through its capacity for doing work at less cost than any other power.

I H C Gasoline Engines

are made in all styles and sizes, 1 to 45-H. P., vertical and horizontal—stationary, portable, and tractor. Their efficiency, economy, and dependability have been proved by years of service. Thousands of owners consider an I H C Gasoline Engine one of the best paying investments they ever made.

If you want to know more about what an I H C Gasoline Engine will do for you, and why it is that I H C construction insures more power on less gasoline consumption than any other engine, you should call at once on the I H C local dealer, or, write for a copy of the I H C Gasoline Engine catalogue.

While you're delaying you are paying, so why not have what you're paying for.

CANADIAN BRANCHES—International Harvester Company of America at Brandon, Calgary, Edmonton, Hamilton, Lethbridge, London, Montreal, North Battleford, Ottawa, Regina, Saskatoon, St. John, Weyburn, Winnipeg, Yorkton.

International Harvester Company of America (Incorporated) Chicago U S A

I H C Service Bureau

What is it? A clearing house of agricultural data. What does it do? Helps farmers to help themselves. How can it be used? By sending your farm problems and puzzling questions to the Bureau. We are co-operating with the highest agricultural authorities and every source of information will be made available to solve your difficulties. We shall be pleased to have an opportunity to assist you. Write the I H C Service Bureau.

RURAL TELEPHONES

There was a good attendance of members at the last meeting of Wardville Union, the roll call showing only three members absent. It was decided to hold a 'basket' social and entertainment on March 17. A committee of one was appointed to secure prices and particulars in regard to the matter of building a rural telephone line from Sedgewick to Wardville.

A. O. WELLS, Sec'y.
Sedgewick, Alta.

WEST LETHBRIDGE UNION

The last meeting of West Lethbridge Union was held at the residence of Mr. Albert Frith, there being a good attendance of members. The president called upon two special committees to make their reports. Seven members entered into a contract to draw their seed wheat a distance of twenty miles from this district, and 860 bushels of Red Fife have been contracted for.

ROBT. CRAWFORD, Sec'y.
Lethbridge, Alta.

GROWING NICELY

Chin Union is doing nicely and is growing daily as the spirit of the union gets a better hold upon us. We have now fourteen paid up members and several have put in their applications for consideration at the next meeting. At our last regular meeting the subject of seed wheat was discussed and the president and treasurer received instructions to interview some millers upon the subject. We will require about 2,000 bushels of seed wheat and 1,000 bushels of oats.

M. J. BOHMER, Sec'y.
China, Alta.

STILL ORGANIZING

One of the new unions has been organized at Brunetta, when members from the Queenstown Union journeyed down into that country to give their brother farmers a chance to join in the work being done by the U.F.A. Messrs. Macomber and Glambeck addressed the meeting. The farmers were very enthusiastic and twenty-five joined the union. The election of officers was then taken up and resulted as follows: President, F. Nagel; vice-president, G. F. Armstrong; secretary-treasurer, A. C. Galbraith. It was decided that the officers should have full power to call meetings at any time, and after a little more routine business had been attended to the meeting adjourned.

A. O. GALBRAITH, Sec'y.
Brunetta, Alta.

POOR RAILWAY FACILITIES

At the last regular meeting of Namaka Union one of the members raised the question of the inconvenient train service given this town by the railway company, and the meeting suggested that some steps should be taken to try and remedy matters.

JOHN BAWVIL, Sec'y.
Namaka, Alta.

A SPLENDID ENTERTAINMENT

Queenstown Union No. 160 held on February 17 one of its most successful agitation meetings and entertainments since the union was organized. Circular No. 1 from the general secretary was read and discussed. A telephone petition, asking the government to extend the telephone line to Queenstown, was circulated and signed. All members who wanted seed grain from the government gave their names in to the secretary. After the business had been transacted, Mr. Tregillus, vice-president of the U.F.A., delivered a very instructive address. Mr. Ostrander, of Gleichen, director for this district, then made a short speech. A couple of members from Berrywater Union attended the meeting and conveyed the greetings from their local to Queenstown. The next on the program was a debate, in which four members of the union took part. This was followed by a dialogue, recitations, vocal and instrumental music, while at eleven o'clock a light supper was enjoyed. The entertainment closed with a dance. Fifteen new members joined the union, making our total membership now 124.

JOHN GLAMBECK, Sec'y.
Milo, Alta.

DISTRICT DIRECTORS SUGGESTED

After a period of quietness Bear's Hill Union is once more getting down to work and the February meeting was a hummer. We believe the district meetings will be a great help in making the local unions successful, and think it would be a good idea to have district directors whose duty it would be to look after a number of small unions in his own locality.

L. SINCLAIR, Sec'y.
Wetaskiwin, Alta.

WHEAT SHEAF WORKING

At the regular meeting of the union recently organized in the Wilhelmina district, held on February 20, it was decided to name the union "Wheat Sheaf." We have decided to organize a school district. This is a new district and was only settled last spring, but it can be safely stated that we are making very good progress.

J. STOKOE, Sec'y.
Wilhelmina, Alta.

RE O.P.R. LANDS

The usual fortnightly meeting of Blackfoot Union took place on Friday, February 24, when orders were taken for a quantity of formalin and strychnine. The recent decision of the Privy Council re O.P.R. taxation was discussed and a resolution was adopted advocating the circulation of a petition protesting against the decision. A resolution was adopted urging the ratification of the reciprocity agreement. The following gentlemen were appointed a committee to enquire into ways and means of erecting a U.F.A. hall at Blackfoot: Messrs. Sulman, Truscott, Donaldson and Stone.

J. STONE, Sec'y.
Blackfoot, Alta.

W. J. TREGILLUS, CALGARY, BREEDER and importer of Holstein Friesian Cattle.

BRAEBURN FARM—HOLSTEINS—Thomson Bros., Boharm, Sask.

SPRING STALLION SHOWS

The following agricultural societies are holding shows on the dates named:

(Group 1) Foam Lake, March 29; Yorkton, March 30th; Saltcoats, March 31st; Dean Rutherford, judge.

(Group 2) Melfort, April 4th; Prince Albert, April 5th; Humboldt, April 7th; R. H. Miller, Lumsden, judge.

(Group 3) Creelman, April 4th; Moose Mountain (Carlyle), April 5th; Oxbow, April 6 and 7th; John Scarff, Hartney, Man., judge.

(Group 4) Mortlach, April 4th; Moose Jaw, April 7th; James Burnett, Napinka, Man., judge.

Maple Creek, March 30; Hugh Gilmour Pasqua, judge.

Craik, March 31; Alex. Mutch, Lumsden, judge.

Govan, April 5th; A. Blackstock, Paynton, judge.

Mature stallions should be shown in the spring when they are in good breeding condition. But young animals should be exhibited at the summer fair when unlike the older animals they can be taken to the fair without interfering with their usefulness. At the time of the earliest at least of the Western fairs, mature stallions should be on their circuits and should not be taken off to attend an exhibition when they can be shown to so much better purpose at the spring stallion show.

The government gives a grant of two-thirds of the prize money paid out at these shows, but not exceeding one-fifth to societies less than five years old or \$101.25 to societies five years old or over.

EFFECT OF RECIPROCITY

"How did you break your leg?" asked the Lady of the House of the Man-Out-of-Work.

"Well, mum, it was caused by the agitation over reciprocity with Canada."

"Reciprocity!"
"Yes, you see the fear of it put wheat down. I was running a grocery store then and my flour fell on me."—Minneapolis Journal.

U. S. FARMERS AND THE RECIPROCITY AGREEMENT

From Philadelphia Saturday Evening Post

We are still exporters of farm stuffs. The bulk of our farmers, on the bulk of their products, have always had to meet the free competition of Canada and every other country in the markets of Europe. Meanwhile nearly everything they bought has been charged with high tariff prices.

If they are really afraid to meet a little Canadian competition at home there is small show of their getting relief from high-tariff exactions, for the whole tariff game consists precisely in playing one interest and one locality against another.

Help us to protect our steel and we will help you to protect your barley. In this give and take the farmer has given a good dollar and got a plugged nickel. The whole question concerning this treaty is whether farm constituencies—or their representatives in Congress—can be induced to keep on playing the game. If they can—after all the tariff agitation of the last two years—it is high time for our standpat friends to sit back and laugh.

The high protection champions are against the treaty. Is this because they are deeply concerned over the butter-and-egg market in northern New York? We fear not. It is because they see this treaty will break the vicious tariff circle. With free butter, eggs and barley the granger vote in Congress can no longer be counted upon for ninety per cent. duties on woolen goods.

MR. PORRITT'S NEW BOOK

Flashes of unconscious humor have frequently brightened the fiscal controversy, but surely there has been none more amusing than the suggestion that the purity of the Canadian political system will be endangered by closer contact with the wicked ways of the Americans. A timely and valuable little volume from the pen of Mr. Edward Porritt, entitled "The Revolt in Canada against the New Feudalism," which Messrs. Cassell have just published for the Cobden Club, gives an illuminating account of the subservience of the Legislature and administration to what Sir Wilfrid Laurier, in a moment of unguarded candor, described as "the vested interests." Not long ago the secretary of the Canadian Manufacturers' Association publicly boasted that it could,

KENDALL'S SPAVIN CURE

Took Off Bog Spavin

Edison, Illinois
"I have been using Kendall's Spavin Cure on a colt that had a bad Bog Spavin and it took it clean off. Kendall's is the best liniment I ever used." Yours truly, F. H. Smith.
Kendall's is the best for Spavin, Curb, Ringbone, Splint, Swellings, Sprains and all Lameness. 40 years has proved it.

if it chose, "bring several millions of people to the verge of starvation or paralyse the whole industry of the Dominion." Its enormous power has, in fact, been constantly and undisguisedly used to secure the imposition of duties and the granting of bounties for the benefit of the Twenty-five Hundred, as its members are called, at the expense of the great bulk of the population. Abundant proofs of this are supplied by Mr. Porritt, and he shows, too, how the system of tariff duties and bounties has led to the formation of industrial combines and mergers—many of them water-logged undertakings in which British investors are heavily involved.—London "Truth."

When writing to Advertisers
Please mention The Guide

Registered Percherons and Holsteins

I have for sale Percheron Stallions and Mares of the highest breeding (blacks and greys). Several Stallions coming 3 and 4. All thoroughly acclimated. Weights from 1,700 to a ton each. The grand, blocky type. Some sired by "Calypso," and some mares in foal to "Carnot," the two champion sires of the Percheron breed. Some imported Mares and Stallions.

In Holsteins, I have Cows, Heifers and Bull Calves for sale. Some young Bulls ready for service. A large herd of the choicest breeding to choose from. Prices lower than any other dealer. Come and see or write.

J. C. DREWRY, The Glen Ranch, COWLEY, Alberta
CROW'S NEST BRANCH C.P.R.

EUREKA

SANITARY CHURN

There's no comparison between the ordinary wooden churn and the "EUREKA". Barrel is stoneware—top is clear glass. Besides being absolutely sanitary, the glass top enables you to see how the churning is coming along without opening the churn. Also made with Aluminum top.

The "EUREKA" is the easiest churn on the market to operate. By tilting back the frame until the weight rests on the wheels, the churn can be quickly and easily moved—while the barrel remain upright.

If your dealer does not handle the "EUREKA," do not take a substitute but write us for catalogue.

EUREKA PLANTER CO. LIMITED, WOODSTOCK, ONT.

SASKATCHEWAN SECTION

This Section of The Guide is conducted officially for the Saskatchewan Grain Growers' Association

SASKATCHEWAN GRAIN GROWERS' ASSOCIATION

Hon. Life President:

District Directors:

No. 1, Jas. Robinson, Walpole; No. 2, J. R. Symons, Fairville; No. 3, T. Wood, Covington; No. 4, C. A. Dunning, Beaverdale; No. 5, W. B. Fells, Dundurn; No. 6, Dr. T. Hill, Kinley; No. 7, Thos. Cochrane, Melfort; No. 8, A. Knox, Prince Albert; No. 9, A. J. Greensell, Denholm.

Elevator Situation

Below is a list of expressions received up to March 14 from sixty of our associations, in the order received at this office. Only three of these are unfavorable to the action of the convention or the elevator commission report. These are given since the convention, after reading the reports, hearing the report of the delegates to the convention, and discussing the matter fully.

FRED. W. GREEN,

Sec'y S.G.G.A.

Idaleen:—Government ownership won debate, but feeling for co-operation very strong.

Creekside:—Endorse action of convention.

Abernethy:—Enthusiastic. Farmers' elevator wants to sell out.

Great Deer:—Unanimously in favor of co-operative scheme.

Eagle Creek:—Endorse same with following amendments: One man, one vote principle. That the Recall be applied to the central management.

Perdue:—Endorse action of the convention.

Bridgeford:—Favor co-operative system.

Fleming:—Does not favor the scheme. Says it is not what they have been asked for.

Riverside:—Local mills at Prince Albert take all the wheat.

St. Antoine:—Favors co-operation.

Highview:—Just the thing. But financially embarrassed this year.

Gainsboro:—Generally favorable. No resolution from meeting.

Milestone:—Favorable to scheme, but must have control of their profits and losses.

Dundurn:—Endorse the scheme. Will pass on the bill when it goes through.

Burnmore:—Does not favor the scheme.

Hazelcliff:—A step in the right direction.

Eyebrow:—Endorse findings of the commission.

Antler:—Endorse action of the convention and recommend the legislature to pass the measure.

Scottville:—Approves action of convention.

Waldron:—Approves action of convention.

Wilcox:—Heartily endorse findings of the commission.

Chamberlain:—Endorses commission report and action of convention.

Arelee:—Quite in accord with the report. Will do their utmost to further scheme.

Tugaske:—Heartily endorse the co-operative scheme.

Beaverdale:—Favorable to the scheme.

Springside:—Unanimously endorse report. Suggest one man, one vote principle.

Central Butte, No. 1:—Unanimously support findings of the elevator commission.

Wadena:—Endorse action of their delegate in supporting the amendment at the convention. Also unanimously endorse the findings of the commission.

Bulyea:—Co-operative scheme more satisfactory than government ownership would be.

Freedholm:—Unanimously endorse report of the commission.

Newlands:—Approve of report and action of the convention.

Lake Centre:—Favor scheme. Very enthusiastic.

Netherhill:—Approve of report. Enthusiastic.

Heron:—Endorse report. Want powers incorporated in the bill to enable them to deal in any commodity in use on the farm.

Ridgeford:—Unanimously accept findings of the commission.

Woodlawn:—Have absolute confidence in the co-operative plan.

St. Maurice:—Endorse all the resolutions passed at the Regina convention.

Ruddell:—Entirely in favor of the report of the commission.

Junia:—In favor of, and will vigor-

ously support, the findings of the elevator commission.

Narrow Lake:—Favor plan as outlined in the report.

Colleston:—Endorse bill, but want further powers incorporated in it.

Lumsden:—Heartily endorse the co-operative scheme.

Willmar:—Favor the findings of the commission.

Keeler:—Everyone sympathetic to the co-operative scheme.

Hansom:—Very enthusiastic. Calling meeting to get ready to form.

Ryerson:—Endorse findings of commission and action of convention.

Tenold:—Approve of the co-operative scheme.

Belle Plain:—Unanimously in favor of the scheme. Want greater powers in bill to enable them to handle any commodity in use on the farm. Also provision in bill for a line of credit.

Waterloo:—In favor of co-operative elevators.

Halcyon:—Strongly in favor of the recommendations of the elevator commission.

Forrest Bank:—Endorse the co-operative elevator scheme.

Pascal:—Favor co-operative elevators as outlined by the elevator commission report.

Southminster:—Endorse the report and the action of the convention.

Stoughton:—Will have nothing to do

with the scheme. Government ownership or nothing.

Kendalton:—Unanimously in favor of the co-operative scheme.

Rocanville:—Approve the report and action of the convention.

North Plain:—Endorse action of the convention and will support the project.

Willow Hill:—Tender resolution approving and adopting the co-operative scheme.

Central Butte:—Unanimously endorse the amendment to the resolution that was passed at the Regina convention.

MR. BAUMUNK AT WORK

A bunch of farmers here have gotten together and started the organization of Grain Growers' Associations in several places. I have had the pleasure of driving Mr. Baumunk, of Dundurn, around to several different places where he conducted meetings and started local branches. You will hear from the secretaries in due time. I was elected secretary-treasurer of the branch association at Waldheim, Sask. We have eleven members to start with. We are simply floating in enthusiasm and would be very grateful for any advice and instructions that would help us. A small number of us read The Guide, and we hope to give it a wide circulation in the near future. That will help some as it is full of good advice.

F. W. PETERS, Sec. Waldheim G.G.A., Rosethorn, Sask.

HEPBURN FORMED

I beg to inform you that a branch of the G. G. A. was formed at Hepburn on March 9, 1911. Following is a list of the officers: President, Jacob Boese; vice-president, P. D. Schmidt; secretary, D. A. Hiebert; directors, H. J. Gossen and C. K. Unruh. The other directors are to be elected at our next meeting on the 18th of March.

D. A. HIEBERT.

Hepburn, Sask.

ORGANIZED AT HERBERT

At a meeting called at the home of J. Lundin, a local branch of the Grain Growers' Association of Saskatchewan was formed. The following officers were elected: President, T. A. McLachlan; vice-president, M. A. Corthers; secretary-treasurer, John Swanson; directors—J. Lundin, Jas. McDowell, J. N. Mathers, Henry Guillaume, D. Carmichael and G. W. Francis. It was decided to call this branch the Herbert Pheasant Valley Grain Growers' Association. The membership list reached thirty, with a good outlook for more members.

JOHN SWANSON, Sec'y.

Herbert, Sask.

PAYNTON ORGANIZED

A local branch of the G.G.A. of Saskatchewan has been formed in this district. We have at present ten paid-up members. Twelve other farmers have promised to join us. I think we shall have a membership of about forty by the end of the year.

JAS. DYMOTT, Sec'y.

Paynton, Sask.

PILOT MOUND RESURRECTED

A meeting of the farmers in the vicinity of Pilot Mound school was held on Feb. 28 for the purpose of re-organizing the local G.G.A., which had become dormant during the winter owing to bad weather and the bad state of the roads. A membership list was opened which resulted in fourteen paid-up

Blackwood Herd, owned by N. O. Partridge, Sintaluta, Sask.

members being enrolled. The meeting declared itself in favor of Direct Legislation and the pledging of members. After a discussion the following resolutions found favor: "That it is the opinion of this meeting that all the Grain Growers' Associations should be in readiness to send as many representatives as possible to the next nomination for candidates for Federal members, and by all reasonable and honest means seek to have none nominated but those who will support the farmers platform." "That two of our number be appointed to visit some of the neighboring associations and endeavor to unite with them in holding a union rally some time in June and seek to procure a speaker for the occasion."

WM GEDDES, Sec'y.

Pilot Mound, Sask.

INFORMATION WANTED

There has been a meeting of the rate-payers of the following townships, viz:—27-16-3rd. and 28-16-W3rd. for the purpose of organizing the above townships into a district to be known as a Grain Growers' Association, with all the privileges enjoyed by any branch Association. Therefore the ratepayers have appointed a committee consisting of three, which committee have been commissioned to obtain all the rules and regulations pertaining to the organization of a branch association. Also any forms that may be necessary to have to complete the organization of the association. Any special hints or papers of any kind we will be pleased to have to further the best interest of the Association.

REPORT FROM DOUGLAS

A meeting of the Douglas branch of the Grain Growers was held in Springfield school on Thursday, March 9. Needless to say in both attendance and enthusiasm, the meeting was a success. It was decided to co-operate in the purchase of formaldehyde. A social gathering is planned to take place in Springfield school on Mar. 22, and a good time is predicted.

A. E. SMITH, Sec'y.

Richard, Sask.

RECIPROCITY ENDORSED

Junia Grain Growers' Association at their meeting on March 8 heard with much pleasure a report of the Regina convention from W. Lake, Sr. of Hurdman Lodge. After his report the meeting considered the elevator commission report, and

after the matter was thoroughly discussed a resolution was passed that we support the finding of the commission. Also resolutions were passed: re the ratification of the reciprocity agreement; free duty on agricultural implements; that the British preference be increased to 50 per cent. of the general tariff.

LEWIS V. COWARD, Sec'y.

Junia.

DOWDS HILL ORGANIZED

I beg to inform you that the Dowds Hill branch of the G.G.A. was organized on Mar. 2nd by R. Pewtress of Netherhill. The following officers were elected:—President, John McDermid; vice-president, A. Dowd; secretary-treasurer, W. Underhill; directors—W. Underhill, C. Hombelwen, J. Godfrey, A. B. Green, S. McCreary and J. Finchback. We have twenty-two members, and shall, I think, get a lot more.

WALTER UNDERHILL, Sec'y.

Dowds Hill, Sask.

FORMED AT BIG TIMBER

The Grain Growers of this district formed an association on Mar. 8th, under the direction of Mr. Holmes of Hansom.

J. H. FINCH, Sec'y.

Romford, Sask.

SALVADOR IN LINE

At a meeting held in this district it was decided to organize a Grain Growers' Association. E. A. Moore was requested to secure information as to the proper procedure, and a meeting was called for Mar. 1, when an association was formed. Twenty-four members were secured. The following officers were appointed:—Hon. president, Mr. Brien; president, John Hockin; vice-president, A. Richard; secretary-treasurer, D. H. Bryce; directors—B. Ell, Mr. Clarke, Mr. McCrey, D. Robinson, N. J. McMann and Mr. Harry Ell.

D. H. BRYCE, Sec'y.

Salvador, Sask.

WOLVERINE DISTRICT FORMED

We had a meeting to-day and formed a branch of the Grain Growers' Association, under the name of Wolverine. J. W. Twigger was appointed president and Mr. Moisman vice-president. We had fourteen join us to-day, and are having another meeting in a week. We expect to get quite a few more to become members.

O. W. ARMITAGE, Sec'y.

Guernsey, Sask.

TUGASKE ACTIVE

At a real live meeting of the Tugaske Grain Growers' Association, the following resolutions were passed endorsing the co-operative elevator project and asking for government hail insurance. At the next meeting the farmers' elevator proposition will be taken up. We aim to be prepared to put up an elevator immediately on the passing of a favorable bill in the legislature re the commission's recommendations.

R. H. PREBBLE, Sec'y.

STILL THEY COME

Will you kindly send me full instructions as to how to organize a branch of the G.G.A.? There would be many branches started in the southern part of the province that has become so thickly settled if the farmers knew just how to go about the matter of organization. Why not give full instructions in The Guide every two or three months?

J. A. REAR.

Swift Current.

BALMAY FORMED

I have much pleasure in reporting that a recent meeting attended by a large number of Arelee farmers culminated in the organization of a branch of the Grain Growers' Association. The new branch has been christened the Balmay Grain Growers' Association. Fourteen names were enrolled, and each and every one of the members is enthusiastic in having Mat. Currie as president. The directors are John Alstrom, Wm. Smith, Fred Strait, Geo. Currie, Clifford King and Chas. Dally.

HERBERT SHEPPARD.

THE GUIDE "SEED GRAIN FOR SALE AND WANTED"

columns furnish prompt and economical means by which the farmer who has seed to sell can get in touch with the man who needs it, and vice versa.

KEEP Your Eye ^{on} the Reciprocity Agreement

BUT

DON'T FORGET
THAT THE STOCK YEAR OF THE

Grain Growers' Grain Company

CLOSES **APRIL 30th**

Every wise business man will secure every share of Grain Growers' Grain Company stock before that date that he can get

Why?

1st

BECAUSE it can now be bought at par value, \$25.00 per share. It is worth considerably more than that amount, and we expect the shareholders will advance the price at next annual meeting.

2nd

BECAUSE all money received on stock before April 30th will bear dividends since July 1st, 1910, ten months before your money is received.

Easy Terms

Where possible, we advise paying down the full \$25.00 per share at time of application, but we will accept \$7.50 or \$17.50 per share down, and the balance next fall when you have the returns for your next crop. No interest is charged on the account unpaid, but dividends are allowed only on the amount paid. Every farmer, farmer's wife, son and daughter, is now allowed to hold four shares each.

Thousands of dollars are being invested in Grain Growers' Grain Company Stock every day. If you want to come in on the present terms send in your application at once

Letter No. 8--TO THE SMOKER OF CIGARS.

You are in the habit of insisting on the very best you can get for your money—in your business. You go carefully into the quality of farm implements, flour, groceries, house furnishings, or anything you purchase.

Why do you not employ the same discrimination in buying cigars?

Why do you pay 10c for a cheaply made cigar manufactured from inferior tobacco, when you can get full value for the same price?

Perhaps you do not know what cigar to ask for. You merely take a haphazard choice from two or three brands that are set before you.

Here is your chance to do better. The ROXBORO CIGAR is the best 10c cigar made today. Don't take my word for it, but cut out the coupon below and get three of the best cigars you have ever smoked for 25c.

As a further inducement, look at these splendidly colored pictures, large sized and framed in Mission Oak, which you can get free by merely saving the bands. START NOW.

I am, yours for the success of the ROXBORO CIGAR.

Navigation via Hudson's Bay

Continued from Page 7

blocked in place, and send it out in January or February to meet and overcome the midwinter storms and midwinter ice on a voyage of sixty to one hundred miles across what is practically a frozen sea, and you have a modern car ferry. Car ferries have made the trip of sixty miles across Lake Michigan when the crew never sighted open water all the way and the boat ran through heavy ice from port to port.

Mountains of Ice

"Miracles of ice-breaking are shown by the car-ferries St. Ignace and Ste. Marie at the Straits of Mackinac. From Lake

Michigan on the west and south and Lake Huron on the south and east, the winter storms push heavy floes into the Straits. These floes, creaking and clashing under the wind, pile one upon the other until they tower thirty feet above the water line and from the water line down sometimes a hundred, a hundred and fifty, even two hundred feet. To break and keep open a channel during the formation of such ice was a problem which staggered the most sanguine men. Ashley solved it with his wooden boats built of white oak, with steel-covered hulls thirty inches thick at points of greatest stress, the first form of the ferries.

"The Ste. Marie can maintain a speed of eight miles an hour through two feet of hard ice. After long study of all condi-

tions by Russian marine engineers, and a winter visit of investigation by Rear Admiral Makaroff, this steamer was copied almost without change in ice-breakers built by the Russian government for use on the Baltic and on Lake Baikal.

"You will ask why, if these boats operate all the year round, all other lake boats are not built in the same way and operated as are these winter boats. The answer is that as yet it would not pay. Midwinter navigation so far is confined to the points of most insistent demand, as at the Straits of Mackinac, and to those of least severe winter conditions, as on Lake Michigan. Moreover the rash hurry which forces the hastily loaded, end-of-the-season freighter out in every sort of weather in order to make a final

trip is without influence on boats running all the year round. Aside from the peril of the ice itself, owners only occasionally subject these boats to conditions so perilous as those of the end-of-the-season rush. They claim a winter percentage loss not greater than that of ordinary navigation during the summer months.

The Ice-Breakers Proper

"One hears thrilling tales of the real ice-breakers. Of the Algemah in the spring of 1905, when she broke out of the ice a fleet of ninety-eight vessels which, starting too early in the season, had been frozen fast in Lake Superior. Of the spectacular trip of the Detroit ice-breakers Britannia and Pleasure in January, 1910, when they crossed the head of Lake Erie through ice thirty to thirty-six inches thick to free a fleet frozen in Toledo harbor and threatened by a river freshet."

Nelson Always Open

Now for a little further comparison. We have the evidence of the deputy minister of railways and canals appearing in his report published in 1909 that Nelson harbor, which enjoys a depth of 26 feet at low tide, never freezes over. He says in concluding his report:

"It might be mentioned here in passing the greatly increased difficulty a hostile fleet would have on blockading the Atlantic coast of Canada were the Hudson's Bay route opened. The fact that the ships may enter and leave Port Nelson all the year round is a fact worth remembering when the possibilities of war are considered."

He might have added, When the possibilities of peace are considered. Mr. R. D. Fry, who took the soundings in Nelson harbor, smiled in my face when I spoke of the use of the employment of an ice-breaker in connection with the winter use of the Port of Nelson. "Well," he said, "you would need it about as much as John D. Rockefeller needs a hairbrush." In the map accompanying the report above alluded to, though the winter when the soundings were taken was a shade colder than the average, the 26 foot low tide channel of the river was free from ice for 10 miles from the mouth.

Sea Is Smooth

In another place the report says: "The anchorage being some nine miles or ten miles in from the mouth of the channel, no serious sea is ever experienced which may cause trouble to anything larger than canoes or row boats. The condition of the seas at Port Nelson will probably be found to resemble those experienced at Quebec on the St. Lawrence." Mr. Fry, in discussing with me the question as to the possibility of landing supplies at Port Nelson in order to commence the building of the railway from that end, which appears the only sane course to pursue, if practicable, said: "At a cost of \$5,000 a temporary wharf could be built from the high bank to the 26 foot channel which is open all the winter."

Thus in the matter of winter ports the Hudson's Bay has the advantage over the Great Lakes. No one now contends that the Hudson's Bay proper is ever frozen over, or even to any considerable extent obstructed by floating ice.

Free as the Atlantic

Dr. Bell, giving evidence before the select committee of the Senate, March 12, 1907, said: "Neither the Bay nor the Straits are frozen up any more than the Atlantic ocean." He said: "I cannot conceive a bay 600 miles wide in the same latitude as the British Islands being frozen with the meteorological conditions being normal for their latitudes." Here you have no Arctic current such as you have along the Labrador coast, nor have you the advantage of the Gulf Stream; you have just the normal conditions for their latitudes."

Whale Boats Safe

In the report of the Dominion government expedition to Hudson's Bay and the Arctic Islands, A. P. Lowe, officer in charge, in describing the whale fisheries of the northern part of the Hudson's Bay, where ice conditions are much more severe than in the middle portions of the Bay, which are the parts ships would traverse in passing between Port Nelson and the Straits, says: "Boats leave the ship (still ice-locked in her winter quarters) early in May long before the ice along the

An Eastern View

In the course of a very able letter in the Halifax Herald, Mr. S. C. Parker, secretary of the Nova Scotia Fruit Growers' Association tells of the eight hundred farmers who waited upon the government at Ottawa on December 16, 1910. Mr. Parker was one of the delegates from Nova Scotia, upon that occasion. He gives the Western organization a great deal of credit for the work done and also makes complimentary references to THE GUIDE. The following are some of the striking extracts from his letter:—

"Delegations pilgrimaging to Ottawa are not uncommon. The manufacturers go from year to year urging their protected interests. Promoters of all kinds of schemes hover round the capital like hungry vultures; trust, and corporations gather there seeking fat contracts and liberal rake-offs, incidentally gathering in their millions. For the first time in the history of Canada an organized delegation representing practically all the farming interests of this great agricultural country, approached the capital."

"The Grain Growers of the West say to the governments in that country: Do this or do that and they do it."

"It is said that Sir Wilfrid did not enjoy these frequent breaks in his supposed triumphal tour. He was not used to being talked to in this straightforward farmer fashion; he enjoyed better the attitude of the Eastern people who are ready to kiss the hem of his garment when approaching him and grovel around waiting for crumbs from the government table."

"John Evans of Saskatoon voiced the feelings of the Western people, when after presenting their claims in that town he reminded the premier that in 1893 he had promised to skin the Tory bear of Protection, and said Mr. Evans: 'I would like to know what you did with the skin!'"

"At ten minutes after ten Sir Wilfrid Laurier entered and took a seat at the clerk's table. Sir Richard Cartwright was seated at his left. Then came the

deluge. For more than three hours these Canadian farmers, through their chosen speakers, presented to prime ministers, cabinet, senators and commons, the grievances that had for many years been rankling in their bosoms."

"When the presentation closed the prime minister rose to reply to the delegation. Sir Wilfrid was received with such an ovation as never before was heard in the staid parliament hall. He spoke for perhaps seven minutes, begging the question of tariff reform, deprecating government operation of the terminal elevators and Hudson Bay Railway, ignoring other minor questions. When he resumed his seat not a cheer was raised, no applause followed. The four hundred Western men who had come expecting some concession to their varied interests seemed paralyzed. Ontario and the East who were at one with the West in the tariff demand were staggered. An ugly feeling prevailed. It was a feeling that in 1837, the days of Papineau and Mackenzie would have wrecked the parliament buildings. Opposition would have caused a riot. In these days the ugly feeling only found expression in subdued murmurs and strong determination to stand by the colors. All that evening and far into the night groups of men in the hotel corridors discussed the situation. One man said:

"Sir Wilfrid put his knife in us up to the hilt. It is no use, we must turn him out. Borden is no better, he still clings to his idols."

"Well," was the reply, "I prefer to trust a man who promises high tariff and keeps his promise, rather than one who has broken every pledge made in fourteen years."

"The delegation do not consider their mission by any means a failure. The negative results will be the means of solidifying the organization. The West and the East will get closer together, organization will go apace. Leaders of the government and of the opposition have their ears to the ground listening to the rumbling. The grain men, the stock men and the fruit men will sooner or later get together and when they do, governments will not refuse their just demands."

Langley's Prediction

Reciprocity Will Boost Regina

In the course of his speech in the Legislature on Mar. 8, on the subject of reciprocity, Mr. George Langley painted a glowing picture of the future of Regina if that agreement once goes into effect. Referring to the government's direction to the Elevator commission to investigate the question of establishing a grain exchange in Saskatchewan, and thus permit the people of the province to control and reap some of the enormous profits being derived from the handling of the grain business of the province, Mr. Langley said that as a result of investigation into the question the commission had unanimously come to the conclusion that so long as the traffic was exclusively in an east and west direction there was no hope of doing anything at all in the direction of altering the present condition of things. But the commission were also of opinion that the establishment of a northern route for the shipment of grain, or the removal by the United States of the duty on grain which would permit of our wheat being shipped to Minneapolis, a condition would be created which would make possible the establishment of a grain exchange at some central point in Saskatchewan, probably Regina, where the work now done in the Winnipeg grain exchange, would be done here, and probably to just as great an extent. Mr. Langley declared he had no doubt about it at all.

Where Railways Will Converge

"I see," said Mr. Langley, "in my mind Regina as the converging point of a number of railways. There is the G.T.P. coming in from Yorkton to the north-east; another very probable line will come from the north-west; there is already the north line running right through the heart of the province; all that will have to be done is to open a short line from Regina to the Souris branch and direct connection will be had with Minneapolis. When the whole work of manipulation of the grain will be done right at Regina, this means that mixing elevators will be built here, for immediately we get in direct touch with Minneapolis there will be a great business with that city."

Mr. Langley went on to say that in the past farmers had made complaint in regard to the mixing of wheat by the elevator companies, but he pointed out that with the shipping of wheat south to the Minneapolis millers, there would immediately arise the necessity of so toning our grain as to make it acceptable in that market. The mixing necessary to supply the milling industry in Minneapolis would have this effect on our grain; during the present year there had at times been a spread of from seven to ten cents per bushel between grades. Between grades four and five the differences had been most pronounced and at times was as great as eight cents a bushel. If a farmer's wheat did not quite come up to grade four there was nothing for it but to put it in grade five, and he lost the whole difference in price, although for milling purposes it was almost equally good. If there was a sample market in Regina that difference in price would be immediately done away with, for a man whose wheat did not quite come up to grade four would sell for milling purposes, and he would obtain within two or three cents of the grade four price, thus, instead of losing eight cents, he could only lose two cents, making a straight gain of six cents a bushel.

Boost the Population

"I predict," said Mr. Langley, "if this reciprocity agreement goes into effect, an addition to Regina's population of 5,000 people within three years, all engaged in the grain business and the interests of the grain business. If any man connected with Regina, or representative of Regina, had opposed this reciprocity agreement it would be like driving opportunity away from one's front door. The going into effect of reciprocity will mean the growth of the province of Saskatchewan and of our capital city in a way no one could have hoped for before this reciprocity came to the front."

THE LOW COST of a "Want"
Ad in The Guide is one of its most attractive features. Only 2 cents per word for one week, or 10 cents per word for six weeks.

MANITOBA SECTION

This Section of The Guide is conducted officially by the Manitoba Grain Growers' Association by R. McKenzie, Secretary, Winnipeg, Man.

MANITOBA GRAIN GROWERS' ASSOCIATION

Honorary President:

J. W. Scallion - Virden

President:

R. C. Henders - Culross

Vice-President:

J. S. Wood - Oakville

Secretary-Treasurer:

R. McKenzie - Winnipeg

Directors:

Peter Wright, Myrtle; R. M. Wilson, Marringhurst; D. D. McArthur, Lauder; C. Burdette, Foxwarren; W. H. Bewell, Rosser; R. J. Avison, Gilbert Plains.

MANY RESOLUTIONS PASSED

The following branches have passed during the past week strong resolutions endorsing the action of the executive of the central association, on March 2nd, when they re-affirmed their stand on the reciprocity question: Griswold, Foxwarren, Myrtle, Stone Hill, Shadeland, Deloraine, Dunrea, Crandell, Barnsley, Carnegie, Elm Creek, Shellmouth, Empire, St. Elizabeth, Boissevain, Letellier. The majority of these branches are sending copies of their resolution to their member in the Dominion House, to Sir Wilfrid Laurier, the minister of trade and commerce and to Hon. Clifford Sifton.

THANK MR. SCALLION

At a special meeting of the Grain Growers held at Valley River, on the 9th inst., an unanimous resolution was passed endorsing the resolution of the executive, and that a copy of this resolution be sent to Sir Wilfrid Laurier, Hon. R. L. Borden, Glen Campbell, M.P., and to the press. The following resolution was also passed unanimously: "That we tender a vote of thanks to J. W. Scallion and other officers who so ably defend, through the press, the stand taken by the delegation of farmers on December 16 last, at Ottawa."

MILLER ENDORSES RECIPROCITY

At a meeting of the Griswold branch held March 11 a strong resolution was passed in favor of the ratification of the free trade agreement, and an increase in the British preference; also the placing of agricultural implements on the free list. W. J. Emerson, of Creelman, Sask., made an effective speech, and I. B. McKenzie, manager of the Echo Milling Company, also spoke strongly in favor of the agreement, expressing his opinion that it would not hurt the milling interests and also that it would considerably enhance the price of barley and flax, of which an increasing quantity is grown in this district. This branch has a membership of about fifty, and practically all the business men of the town are in sympathy with them.

LENA ORGANIZED

On Friday, March 10, an organized deputation from Killarney composed of Messrs. Campbell, Hayden, Stow, Magwood, Hodson and Finlay journeyed to Lena, and delivered instructive addresses on what the Grain Growers have accomplished and the benefits the farmers derive through the Grain Growers' Association. A local branch of the Grain Growers was then organized with a membership of twenty. The following officers were elected: President, Mr. Stewart; vice-president, A. Foster; secretary, G. Church; directors, Messrs. Archibald, McIlroy, Anderson, Finleyson, Sproul, Barber.

ROSSENDALE FORMED

On March 11 the Rossendale farmers, with the help of J. S. Wood, of Oakville, organized a branch of the G. G. A. The following were elected as officers: President, R. Henry; vice-president, J. A. Nicoll; secretary, Wm. J. Love; directors, F. Sawyer, S. Farnell, A. Perkins, A. Ferguson, J. Koskyn. It was decided to petition the elevator commission for a government elevator at that point.

MOUNT PLEASANT IN LINE

On March 6 a meeting was held in Mount Pleasant hall, Brown, to consider the advisability of forming a branch of the association. J. Dudgeon, president of the Shadeland association, conducted the meeting, and Wm. Compton, of Darlingford, gave an address touching upon the early days of the settlement and the uphill road the farmer has had to climb since the beginning, and then explained the working of the association in a very interesting and helpful manner. The chairman read the constitution, and gave many good reasons why farmers should organize, and then followed a short address by Mr. Phillips, of Shadeland, who laid emphasis on the spirit of union and urged all to join. Fifteen members were secured and the following officers were elected: President, J. S. Gillis;

vice-president, Wm. C. Meiliche; secretary, T. J. Gislason; directors, F. Dreger, A. Spangela, Otto Marquette, A. Olafson, A. Staple, H. Kristzanson.

GLENELLA FAVORS PACT

W. Tompkins, secretary of the Glenella branch, writes us that they held their regular meeting on March 11, when the secretary read the circulars from Mr. McKenzie and Mr. Henders in connection with the passing of resolutions on the question of the tariff. At their February meeting they passed a similar resolution and sent a copy to Glen Campbell, M.P. at Ottawa.

GLENORA FOR RECIPROCITY

Owing to the strong opposition to the reciprocity agreement now before parliament, the Glenora branch of the M. G. G. A. passed the following resolution: "Resolved, that we, the members of the Glenora branch, re-affirm the resolution placed before the government at Ottawa by the farmers' delegation in December, 1910, and at the annual conventions during the last two years, for reciprocity with the United States and an extension of the British preference."

BAGOT RESOLUTION

At a meeting of the Bagot Grain Growers' Association held March 11 the following resolution was passed: "That this association condemns the attitude taken toward reciprocity by the Hon. Clifford Sifton, the Manitoba govern-

Home of John E. Duxbury, Etkorn, Man.

ment, the Winnipeg board of trade, the Winnipeg Grain Exchange, etc., in that they do not properly express Western sentiment and that this association endorses the original position as presented by the delegation of farmers to the Dominion government at Ottawa."

WOODNORTH LINED UP

An organization meeting was held at Woodnorth on March 4, and a branch of the association formed with the following officers: President, Chas. Weldon; vice-president, David Smith, secretary-treasurer, J. Matthewson; directors, W. Pigg, R. Mooney, Wm. Lyons, J. H. Stephenson, J. W. Burton, J. Rodjick. The directors were instructed to see about securing a station agent at Woodnorth, and also a blacksmith. The association starts off with a membership of twenty-nine and the future looks bright.

ENDORSE EXECUTIVE

At the last meeting of the Somerset branch of the Grain Growers' Association, the following resolution was moved and carried unanimously: "That we, the members of the Grain Growers' Association, of Somerset, duly endorse the resolution presented by our executive, in favor of the ratification of the reciprocity agreement now before the House of Commons."

BARNSLY MAKES START

The president and secretary of the Carman branch assisted in organizing a

new branch of the Association at Barnsly, six miles north of Carman, on March 7th. There was a good attendance and about fifteen joined. This ought to make a thriving branch, and judging from the interest the members take in the work, they will very soon have a membership of forty-five or fifty.

REPUDIATE GOVERNMENT'S ACTION

A Garnett, secretary of the Carman branch, writes us as follows: "The Carman branch of the M.G.G.A. held a concert in the central school on Friday evening, March 10. The concert was an entire success in every way, the school room was packed, and an excellent program was provided. The ladies provided lunch, and although this is the first concert of the Grain Growers in this district, it is not going to be the last. We are planning to carry our meetings through the summer, and intend to meet at least once a month if possible. Next fall we aim to start a literary and debating society in connection with our association. Our aim is to get the young people interested and provide a place where they can enjoy themselves socially, and improve themselves intellectually. The great question everywhere is reciprocity. You can hardly meet a man anywhere but what he has something to say on reciprocity. From what I can hear from farmers and business men the agreement has very few opponents. No doubt there is going to be a big fight and our members realize that we must lose no opportunity to express our views and repudiate the views of those who should represent us, but very often misrepresent us instead. Our members and many others, in both town and country regret that the Hon. R. P. Roblin, our member for Dufferin, has put himself on record as being against reciprocity, and they condemn him in no uncertain way for the stand he has taken, as the following resolution will show. "Whereas, the Manitoba legislature has by a resolution declared against the reciprocity agreement now before the Canadian parliament, and whereas, Hon. R. P. Roblin, our member in the local legislature claiming to speak for the people of Manitoba generally and the people of Dufferin constituency in particular, has from his place in the legislature and elsewhere declared that reciprocity with the United States is not in the best interests of the people of Manitoba; therefore, be it resolved that we, as members of the Carman branch of the Manitoba Grain Growers' Association, claim that in our opinion the resolution passed by the Manitoba legislature does not represent the popular opinion of the people of Manitoba, and further, we emphatically assert that the above-mentioned gentleman by his public utterances has absolutely misrepresented the opinion of the members of this association." The association also passed a resolution endorsing the resolution passed by the executive of the Central association on March 2nd.

WANT RESIGNATIONS

The Sinclair branch of the M.G.G.A. held a well attended and enthusiastic meeting on March 10. D. D. McArthur, representing the central association, was present and delivered a very interesting and instructive address upon the work of the association, the terminal and line elevators and the tariff question. A short musical program followed by refreshments served by the ladies helped to make the evening pass very pleasantly. Resolutions favoring reciprocity, abolition of duties on agricultural implements; an increase in the British preference, were carried unanimously. Also, "in view of the stand taken upon the reciprocity question by our representative in the House of Commons, and our representative in the Manitoba legislature, from the constituencies of Virden and Arthur, of which our members are electors, therefore, be it resolved that we ask for the resignation of Hon. Clifford Sifton, H. C. Simpson and A. M. Lyle." This resolution was carried unanimously. After

a vote of thanks to the speaker, the meeting was brought to a close by singing the National anthem.

SWAN LAKE RESOLUTION

J. E. Docking, secretary of the Swan Lake branch, writes us as follows: At a meeting of our association today the following resolutions were passed: "Whereas, the Manitoba legislature have, by resolution, declared against the reciprocity agreement with the United States, it is hereby resolved that we express our conviction that in so doing the legislature entirely misrepresented the feelings of the vast majority of the voters of Manitoba, and that we look upon the said reciprocity agreement as a beginning only of an entire change in trade matters which will be to the advantage of the entire population of Canada; and further, be it resolved that we, the members of the Swan Lake branch, are agreed in asking for: 1. Ratification of the reciprocity agreement with the United States during the present session; 2. That agricultural implements be placed on the free list; 3. That the British preference be increased to fifty per cent. of the general tariff during the present session, and believing as we do that these changes will be of the greatest benefit to every branch of industry and to Canada as a whole, we will use every legitimate means to have them effected."

OFF TO A GOOD START

The Grain Growers at Elva held an organization meeting on the evening of March 7 and the hall was filled to the doors, with an enthusiastic crowd of Grain Growers and their wives, and although Mr. Kerr was unable to be present as expected, a first class program was given by our local talent. Hy. Bird presided in a very able manner, briefly outlining the work of the association and the reasons for organizing at this point. An intermission followed and those who wished to become members were given an opportunity to pay in their fees, after which the business of electing the officers of the year was proceeded with. A. G. Fulton was chosen president; H. Bird, vice-president; Alex. Mattice, secretary. The branch starts out with a membership of forty-three, thirty-eight gentlemen and five ladies, and bids fair to become a live factor for good in this district. We intend to hold monthly meetings, and each will be of a social order, which will keep up the interest in the association.

ALEX. MATTICE, Sec'y.

Elva, Man.

SPRINGFIELD MEETING

At a meeting of the Springfield branch of the Manitoba Grain Growers' Association, held March 9, the following resolutions were passed: "That we reaffirm the resolution as passed by the Manitoba Grain Growers' executive in Winnipeg on March 2." "That in the opinion of this meeting it is very desirable that steps be taken to bring into effect, within the municipality, municipal school boards and consolidated schools." "That this representative body of Springfield taxpayers would petition the government that an equalized levy be levied on all lands for school purposes in this province."

ELM BANK MEETING

The regular meeting of the Elm Bank branch was held in the Elm Bank school on March 4. Nine new members were added to this branch, which has now got a live membership of twenty-one. The following resolutions were passed, a copy of the resolution on the

tariff to be sent to Wm. Staples, M.P., at Ottawa: "Resolved that it is to the best interest of ourselves and Western Canada to have free trade with the United States." "Resolved that we believe in the Initiative, the Referendum and the Recall." "Whereas, the increased educational advantages of the present have prepared young men for the responsibilities of life at an earlier age than formerly, therefore be it resolved that young men should have the full privileges of citizenship at the age of eighteen."

ELM CREEK RESOLUTION

The following resolution was passed by a large meeting of the Elm Creek, Manitoba, branch, called especially to discuss the reciprocity question:

Moved by J. J. Elliott, seconded by W. W. Buckingham: "Resolved, that the Elm Creek Association heartily endorse the action of the Dominion government in its agreement of reciprocity with the United States, insofar as it goes, but trust that this may be only the thin entering of the wedge and that ultimately the principle may be very much enlarged, especially as to the removal of duties on agricultural implements, and also the increase of the British preference to fifty per cent. And further, we wish to take this opportunity to affirm that the Hon. Clifford Sifton, from his place in the House of Commons; the Winnipeg Grain Exchange, the Winnipeg Board of Trade, and the Manitoba legislature, do not represent truly the sentiment of this Western country in their declaration against reciprocity. And with this present opportunity we wish to ask, in the name of the people of this community, and we believe of the province as a whole: 1. The ratification of the reciprocity agreement now before the Dominion parliament; 2. The complete removal of duty on agricultural implements; 3. An increase in the British preference to 50 per cent. of the general tariff; 4. The taking over and personal management by the Dominion government of all terminal grain elevators; 5. The building, ownership and control of the Hudson's Bay Railway."

DIRECT LEGISLATION

F. J. Dixon, who is organizing for the Manitoba Federation for Direct Legislation in Manitoba, is meeting with very great success and branches are being formed at many places throughout the province. The following is a list of meetings which Mr. Dixon will address shortly on the subject of Direct Legislation:—Oakville, March 27th, Monday, afternoon and evening; Beaver, March 28th, Tuesday, afternoon and evening; Arden, March 29th, Wednesday, afternoon; Birnie, March 30th, Thursday, afternoon and evening; McCreary, March 31st, Friday, evening; Roblin, April 1st, Saturday, afternoon and evening; Durban, April 3rd, Monday, evening; Swan River, April 4th, Tuesday, afternoon and evening; Minitonas, April 5th, Wednesday, afternoon and evening; Valley River, April 6th, Thursday, afternoon and evening; Newdale, April 7th, Friday, afternoon and evening; Minnedosa, April 8th, Saturday, afternoon and evening.

For further information with respect to these meetings write to Seymour J. Farmer, secretary, 239 Chambers of Commerce, Winnipeg.

CHAMP CLARK'S "PUNGKIN" PIE

Long before he came into prominence as prospective speaker-elect of the House of representatives, Champ Clark became, as he has ever since continued to be, one of the picturesque characters of Washington. It was a rare treat to sit down with him at one of the tiny tables of the lunch room where the plebeian public are wont to dine and join him in digesting a piece of pumpkin pie (and be sure to call it "pungkin"). It seems to be more to the liking of Champ Clark to eat with "the common folks" than to take his place in the inner sanctum marked "Members Only." Mr. Clark's real Christian name is James Beauchamp, but there was such an abundance of James Clarks that he induced people to call him by his second name. Folks out Missouri way pronounce Beauchamp "Beecham" instead of "Bo-shom," which offended Mr. Clark's ear, so naturally and inevitably he became Champ Clark after his initiation to the field of politics. "Affairs at Washington," Joe Mitchell Chapple, in National Magazine for March.

Dry Farming for the West

Heavy falls of snow have been general in the Western Provinces during the present winter and the fields will receive a good soaking in the spring, which should be conducive to early germination of the crops as far as moisture is concerned. But who can tell what the harvest will be? A good general crop will depend, to a great extent, on the rainfall during the summer; but should the rainfall be limited, fair to good crops may be looked for in certain districts, while in other localities there may be partial to total crop failures. The difference between the good and the poor crops in the advent of a dry season, will depend almost entirely upon the condition of the soil, not so much as to its fertility but to its ability to retain moisture. Soil that has been tilled with a view to conserving the moisture will—as recent years have proven—grow a fair crop even though the season be a dry one, while the fields that have not been cultivated with any definite purpose as to the conservation of moisture will, in all probability, yield a poor stand of wheat.

Dry-farming is an old practice, yet it is just recently that its principles are being understood and practiced in the West. In former years, tracts of land in the West known as the "dry belts" were not settled, or, if settled, were abandoned in a few years—the farmer having made unsuccessful attempts to grow a crop. Now, however, these abandoned fields are being reclaimed and magnificent crops are being raised on them even though the rainfall is not any heavier than the past.

The Past Season

The season of 1910 was exceedingly dry in many sections of the Western provinces, yet, even in those dry districts, good and poor crops grew side by side. Two fields of equal fertility were sown adjacent to one another, one yielded twenty-five bushels to the acre while the other was not worth the cutting.

Taking one year with another, there is ample rainfall to grow at least two crops, but, the trouble is, this rainfall does not always come at the opportune season and the result is, in many cases, disastrous to the growing crops. It is, therefore, the farmer's business to conserve this moisture so that in times of protracted drouth the crops will be able to draw an ample supply of moisture from the soil. In 1849 when the settlers swarmed into the dry state of Utah, U. S. A., many of them turned their attention to the irrigation of the soil and vast sums of money were spent on this system. It was then that a little band of immigrants—most of whom hailed from Scandinavia—settled on what is known as Bear River City. They drew the water for their farms from the Malad River. Now the water of this stream is heavy with alkali, and it was only a matter of a few years until the lands had become so impregnated with noxious salts as to be unable to sustain a crop. In despair the settlers swung their plows into the hopeless sage-brush lands, planted their wheat, and waited. To their amazement the seed sprouted and the young plants stood up bravely in the scorching sun and yielded a bountiful crop. Dry-farming in Utah is thus no mere theory, but an actual fact, and if further proof was needed it would be found in the latest statistics, which show that the acreage under the plow and the harrow is already far greater than that under the irrigation furrow. Again, when we consider that fifteen inches of rain is the average rainfall in large sections of Utah, extending over periods of half a century, and that excellent crops are yearly raised, perhaps the Western farmer may consider the conditions under which he has to grow his grain not so trying after all.

It has been the custom in many parts of the West to plow the summer fallow late so as there would not be much bother during the summer in controlling the weeds. In a great many cases too, in districts where the soil was inclined to drift, the land was not harrowed or cultivated, consequently, being left in this loose open state, it did not retain the moisture and in the spring, instead of having a firm seed bed, it was loose to the bottom of the plowing. In such cases, when the summer happened to be a dry one, the soil not being in a condition to raise moisture to the roots of the plants, a poor crop was the result.

Evaporation

When rain falls it soaks into the thirsty ground and immediately undergoes a process of evaporation. This evaporation is exceedingly rapid. When the farmer first commences to work in the spring, after a winter of heavy snowfall, his land is usually very wet, yet, in a very few days the fields become dry. Where does the moisture go? It cannot go deeper into the ground because the earth is frozen about a foot below the surface, therefore, the only way it can have escaped is through the air. If there was

By working the surface to a dust we provide the lid. But the work is not yet done. Vegetation will be in evidence in a fortnight and nature is consequently working to re-establish those minute capillary tubes, while an atmosphere hot and dry and the co-relating high winds are stealing away our soil moisture. The harrow now applied will again establish the dust covering, destroy vegetation, stop up the water tubes and further compress the land by driving out any voids that may have escaped the first work.

Dry-Farming Pays

Does dry-farming pay? That is the question uppermost with the average farmer. The best man to go to for the answer is the farmer who practices dry-farming. In the first place, he will tell you that by practicing dry-farming methods that he is sure of a crop and, secondly, that the systems of dry-farming do not entail any more expense but simply mean doing things at their proper time. You might as well ask the stock feeder why he feeds his animals carefully and systematically. Because, he will tell you, there is no other way that pays.

The following are the results of eight representative farms in Utah and Idaho—wheat at 75 cents per bushel:

		Results Per Acre:			
Name and Address	Acres	Years	Yield	Cost	Profit
F. Gribbin, Weiser, Idaho	160	1910	22.20	\$7.00	\$ 9.65
Grace Bros., Nephi, Utah	600	1905-9	30.00	5.60	16.90
I.F.D.F. Co., Idaho Falls, Ida.	400	1910	18.00	6.00	7.50
J. Jensen, Collinston, Utah	320	1905-9	25.00	5.47	13.28
W. H. Philbrick, Am. Falls, Ida.	4,000	1910	18.00	5.25	8.25
P. Peterson, Petersboro, Utah	500	20 yrs.	24.60	5.96	12.40
W. & W. Rexburg, Idaho	2,300	1910	33.00	7.00	17.75
J. Q. Adams, Logan, Utah	600	1905-9	27.00	5.35	14.90
Average			24.70	\$5.95	\$12.59

no way of checking this evaporation, dry-farming would be out of the question, but nature has made provision so that the farmer, by a little ingenuity, can prevent evaporation. Every farmer has noticed how dry and hard the prairie sod frequently is, while a field of summer fallow alongside is moist about two inches below the surface. The reason of this is that, the fallow has a few inches of dust mulch on the surface which prevents the progress of evaporation. The moisture rises easily through the hard packed soil but when it reaches the loose earth on the surface the attraction is broken and evaporation is checked. The whole secret, then, in the preservation of moisture is the keeping of this dust mulch ever on the surface of the soil. As soon as it rains, this dust mulch forms into a crust; thus the necessity for the farmer to stir up the surface of the soil after every rain so that as little moisture as possible may pass into the air.

Timeliness the Keynote

Timeliness, or doing things at the correct time, is the keynote in the preservation of moisture. We observe that stubble land is depleted of water at the rate 1.5 pounds per square foot per day and when we consider that the water therein is preparing plant food, we can conceive of its vastly greater value to that of the later rains. By plowing early we secure a more speedy decay of the surface vegetation; we break up those small channels formed by the passage of moisture through the soil and by promptly working the land so plowed with a disk and harrow we break up those clods on the surface and sub-surface; we granulate the soil and we expel the air chambers around those underlying clods. But it is asked, how does this check evaporation? Earth attracts and holds water. Dust repels it. A glass of water thrown on a dusty table furnishes the illustration. By working the land deeply with a plow we provide a cistern for subsequent rainfall.

Follow Latest Methods

The farmers named on this chart are following the latest approved dry-farming methods very closely and as shown in the chart they are reaping the rewards of their intelligent work. The chart gives the approximate acreage of each farm, the years from which the results are obtained, the average yield per acre of wheat, the cost of producing an acre, the profit per acre, and the amount of money upon which that profit is 10 per cent. interest. It will be noticed that the size of the farms varies from 160 acres to 4,000 acres; that the yields vary from 18 bushels to 33 bushels; that the cost of production varies from \$5.35 to \$7.00 per acre. These farms are located in localities varying widely in their natural conditions. The results obtained, therefore, give a fairly good idea of not only what can be done on the dry lands, but what is actually being done. The average yield per acre of the eight farms is 24.7 bushels, produced at a cost of \$5.95 per acre.

It is very interesting to note that the man who has farmed longest—Peter Peterson of Petersboro, Utah,—has obtained an average yield at an average cost which is practically the same as the eight farms listed. This strongly corroborates the average given in the above chart. The possibilities of dry-farming are assured by the fact that where only one year's results are given, they were obtained in 1910, the driest season on record in those states.

The cost in the above chart represents the total amount expended from the time one crop was harvested, throughout the following fallow season, and up to the time the next crop was harvested.

It must be borne in mind, however, that these results were obtained from good farmers. They are men who not only believe in, but also practice, approved dry-farming methods. They summer fallow every other year; plow deep, usually in the fall and cultivate their grain in the spring.

The Western farmer can readily see, that situated as he is on lands equally as fertile as those in the state of Utah, and having a much heavier annual rainfall, that under dry-farming methods, that no year, no matter how dry, could cause a total crop failure. There is a great deal of talk about retaining the fertility of the soil, but soil no matter how fertile, will not yield a crop without moisture. The most important matter the Western farmer has to deal with is how to conserve the moisture in the soil and this can only be realized by the farmer who understands and practices dry-farming methods.

DRY FARMING: Its Principles and Practice

(By William McDonald, M.S., Agr., Sc.D., Ph.D.)

The readers of The Guide have demanded reliable information on "dry farming" as it is called. After considerable search and consultation with experts this book was selected. The author is one of the leading agricultural scientists of the day and has studied conditions in South Africa and United States. The author treats of the "Campbell System" of dry farming and also devotes a chapter to "The Traction Engine in Dry Farming." Professor W. J. Elliott, who is in charge of the C.P.R. farm at Strathmore, Alberta, and one of Canada's leading Dry Farming Experts, says: "I could certainly recommend 'Dry Farming' to all those who are considering this work in any one of its phases, and in fact for any man who is farming under more humid conditions there are many points that will aid him very much in the handling and treatment of his soil." The book is written in a simple style that may be understood by every man who reads, and in fact, so well has the author prepared this work that it reads like an interesting novel. It contains 290 pages and is well illustrated. This book is kept in The Guide office and will be sent by return mail, \$1.30, postpaid.

Freer Trade Must Come

Continued from Page 8

those, who, through the operation and manipulation of the present high tariff now enjoy special or class privileges at the expense of the consumer, i.e., chiefly the farmer and wage earner. I say "possible exception", but I am of the opinion that the benefits that would accrue, even to that class, through widened markets and freer trade, and consequently increased business, and enhanced general prosperity, would more than offset the advantages they now derive from the protection they enjoy at the expense of the masses. The cry that freer trade would tend to annexation is unworthy a place in the discussion of this question. A contented and prosperous people never seek to change their national allegiance, as Canadian history, and indeed all history shows. If there were the slightest basis for this cry the United States government could easily force the required conditions by simply removing its duties as against Canada. The annexation sentiment that had a considerable hold in Upper and Lower Canada previous to 1854, practically disappeared during the years when the former reciprocity agreement between Canada and the United States was in operation. Not only should the reciprocity agreement of 1911 receive prompt ratification, but in my opinion agricultural implements should be placed on the free list or at least have the duties thereon very materially reduced, and the British preference should be increased to 50 per cent. without delay.

P. S. Austin Ranfurly, Alta.—Regarding the ratification of the reciprocity agreement; every man, and woman as far as that goes, in this district, is sincerely trusting that parliament will ratify the agreement during the present session. Every effort should be made to have in-

corporated with the free list, agricultural implements. I am satisfied that there will be no peace between the farmer and the statesman until same are admitted free. In connection with adjustments in tariffs the British preference should be increased to fifty per cent. during the present session. In fact, could I use my franchise in the matter, I would vote for 100 per cent. increase. That is the size of my patriotism. Canada is preeminently a farming country, and the conditions under which manufacturing is carried on here makes the cost of the manufactured articles come too high. Either let the manufacturer return to the soil (plenty unoccupied out West), or move his plant where cheaper labor and raw material can be secured. Of course that will be O. K. for the Canadians.

John R. Symons, Pense, Sask.—There is no doubt much serious questioning among some of our brother farmers as to whether or not our big delegation to Ottawa did not go too far in their demands for (1) reciprocity with the United States, (2) the placing of agricultural implements on the free list, (3) a fifty per cent. reduction in the British preferential tariff coupled with direct taxation.

Granting that these are standpoints which should be considered in establishing commercial relations, let us use them in application to our demands at Ottawa.

(1) Reciprocity in natural products with the United States. Possibly all will allow that there is no difference in natural conditions of sufficient importance to be a bar to reciprocity—we are willing to allow that social conditions in the United States are equal to our own on the average, and since the agreement is reciprocal, the United States is imposing no condition which we need resent. From a protectionist standpoint, then, all can agree to this proposal.

(2) Placing implements on the free list. As this is not necessarily to be reciprocated by the United States, from a protectionist standpoint this could not be agreed to. But this does not mean by any means, that the home maker of implements is to bleed the user unmercifully as in the past. He must be compelled to be satisfied with a fair profit in return for his advantage in the home market. In so far as Britain is concerned, there is no difficulty.

(3) A 50 per cent. reduction in the British preference. Taking into account our three standpoints, every protectionist farmer can agree to this equally with the free trader. Granted this reduction, there would still be ample protection for the home manufacturer (nay, too much, since many articles are protected by from 20 to 30 per cent.) and there is no objection from standpoints two and three.

We may conclude then, that there would be no inconsistency in every farmer heartily supporting demands 1 and 3, with free trade in agricultural implements at once with Britain, also with the United States, so soon as they see fit to meet us.

My own position is that the extreme free trader and the extreme protectionist are both wrong, and that in endeavoring to create or moderate economic conditions (and with them social conditions), the position of "the other fellow" must be taken into account.

D. D. McArthur, Lauder, Man.—As a born Canadian and a British subject, I would like briefly to express my views on the agreement which is now under discussion at Ottawa. And first let me affirm that party politics have nothing to do with my stand on this vital question of tariff reform. Although I have my party leanings, I have heretofore on more than one occasion voted in support of candidates of the opposite party. To my mind party politics is to-day one of the leading curses of the age. It is a national calamity, for an intelligent electorate to give place to their own judgment and act on the findings of political leaders, who may be seeking self-aggrandizement rather than the good of the people they serve. I view with alarm the earnest endeavor put forth by certain politicians of both parties, at the present time to stir up party feeling in support of the privileged classes. I earnestly trust that the farmers of Canada will not allow themselves to be influenced by partisanship to their own detriment. Let us stand by the principles we have been advocating for years past. As farmers we are organizing ourselves in self defence. We are united in our general principles. We have not; forgotten our united prayer presented to the Tariff commission a few years ago,

for "tariff for revenue only" and free trade in agricultural implements. Neither is it ancient history, the united stand which our farmers of the three provinces have taken in connection with tariff reform, in their annual parliaments. The climax of enthusiasm was reached in these conventions when the question of free trade was pronounced upon. Furthermore I affirm that in our local association gatherings the subject of tariff reform leading up to free trade, has always been of primary importance. It may be further noted that in all our private or public discussions in this West, it was all but impossible to ascertain the political leanings of the advocates of the above reform. The late tariff agreement is in accord with our wishes so far as it goes. It is extremely disappointing to us inasmuch as it does not include agricultural implements on the free list. The finding of the Saskatchewan Grain Growers' convention is in line with this view; so is the unanimous verdict of the directorate of the Manitoba Grain Growers' Association. The stand taken by Mr. Sifton on the tariff agreement is surprising in the extreme. Oh, how suddenly mighty politicians become converted! I surmise there may be a cause, "Western Canada to become the backyard of Chicago! Annexation! Lower prices for farm produce!" Such rot! He adds that the government have had no mandate from the people to warrant such an agreement. Did the delegation which met the "Tariff commission" a few years ago, all over this West mean nothing? And did the delegation to Ottawa last December mean nothing? When reciprocity and free trade were the leading planks in their platform, a delegation which represented a large majority of the electorate of the Dominion. Furthermore were the numerous appeals of Western delegations, which waited upon Sir Wilfrid during his recent tour of this West, urging tariff reform, to be of no avail? Is it not a fact that for forty years a large majority of the voters of the Dominion have been looking to the United States to meet Canada with a view to lowering or eliminating tariff walls? And is it not a fact that Sir John A. Macdonald and Sir Wilfrid Laurier visited Washington on different occasions in order to secure freer trade relations between Canada and the United States, but were unable to secure concessions? The tide has turned, Washington invited negotiations, and were, so far as we can see, extremely fair in their propositions. A mutual agreement was arrived at by the leaders of both governments. Let the people of Canada turn this agreement down and we are down and out as far as the American markets are concerned. To the unbiased, intelligent farmer it appears to be a monstrous assertion to affirm that the opening up of a market that gives us access with our produce to ninety-six millions of people, would not be advantageous. Furthermore, it cannot be denied that prosperity to the farmer spells prosperity to the various industries throughout the Dominion. Further, I affirm that an increase in the British Preference to say 50 per cent. for the time being, and ultimate free trade with the home land, is the expressed wish of a large majority of the Consumers in Canada.

James Speakman, Penhold, Alta.—Under favorable conditions we could easily increase our production so as to pour larger volumes than now along our present channels and still have plenty for any demand that may come from the south. Some of our opponents are curious people. They don't want reciprocity which might enable us to sell some cattle in the States, and ought to sell in the British market. But when we tell them that the Argentine Republic by a well organized dead meat trade with Great Britain is rapidly killing out our live stock and that they ought to organize a chilled meat system, they turn a deaf ear.

Some of the objections are amazing. Why should millers squeal when under the reciprocity agreement wheat and oats are free, while flour and oat meal remain protected? They say our wheat will go into the hands of American millers and Canadian mills will suffer. Why should they? Will the reciprocity agreement hinder Canadian millers from having all the wheat they want if they will pay the market price for it?

The opposition of the manufacturers would also seem amazing at first sight, for the reciprocity agreement treats them very tenderly. But they smell a rat.

The famous statement of the apostate liberals in Toronto reveals it. In clause 7 they say, "Canada would be forced to extend the scope of the agreement so as to include manufactures and other things." There's the rub and they are quite right. We farmers intend to have freer trade all round.

The opposition of transportation companies is understandable. The present conditions give them a monopoly in carrying our goods East and West so that they can fleece us at their sweet will. The reciprocity agreement besides opening up some trade to the south will give us competing lines for our East and West trade, so that Canadian lines may have to reduce their freight. A good thing for the whole community but a sad trouble for the shareholders. Here at least we come up against a sincere reason for opposition and it is my impression that much of the present noise comes from this one source, for in my work as U. F. A. director, I have come across a good deal of underground connections between the railway companies and the heads of other monopolies who were railway shareholders.

The loudest, and to my mind the most groundless objection, is the annexation cry. Principal Peterson of the McGill University, whom I knew as principal of University College, Dundee, Scotland, when I was indulging in some chemical

study, said about two weeks ago: "Many of us must be pretty conscious that if the United States had been kind to Canada in the sixties it would be open to question whether Canada would exist today as a separate nation." I cannot remember how many years ago, perhaps about thirty, when I was living in Scotland there was some talk about reciprocity treaty between Canada and the United States and I felt violently opposed to it, because I felt sure that such a commercial union must soon lead to a political union. Today I have not the slightest thought of that kind. For two reasons, firstly, because of the difference in the conditions there was no preference in those days. Britain would have been separated from Canada by a high tariff wall. America and Canada would have been united by free trade. That cannot take place today especially if the farmers' proposals be carried out in full. Secondly, in those days I was completely ignorant of Canadian sentiment. After living in this country for twenty years I know that there is practically no annexation sentiment in Canada, but a very strong feeling against it. Even the Americans, who settle among us seem to assimilate largely with us. Why should doing more business with a country tend to make us want to give up our own nationality? No one dreams that the United States would want to annex us by force. Canada seems to be growing every year more free, more independent, more truly a nation, and I am rather proud to think that our farmers' work at Ottawa stimulated and strengthened the united national feeling of the Canadian people. Our farmers' tariff proposals seem to be in the best sense broad and statesmanlike. They would tend to build up a great Canada, free, prosperous, loyal to Great Britain, friendly with America, a splendid connecting link between the two countries.

George Langley, Maymont, Sask.—
When the monster demonstration of farmers went to Ottawa to place their view of public matters before parliament the tariff was made the chief point of complaint; both its principle and its incidence were denounced. I do not wish to discuss the abstract principle of tariff versus free trade, except to this extent—all tariff duties are prompted by selfishness, and the only possible defense is that selfishness may at times be justifiable. The main point of our complaint, however, was that in the incidence of tariff duties the farmers were being discriminated against, so that while the manufacturing interests were taxed by the operation of the tariff law, in their case it was merely taking money out of one pocket to put it back in increased quantities in the other while the farming class were drained without getting any benefit at all, or in other words, the tariff law had become a means of extortion from the farmers for the benefit of the manufacturing interest. The fight that is being put up at the present time by the protected industries and the capitalistic class on their behalf is in reality the battle of unreasoning self-interest against justice. It shows that no matter how indefensible a vested interest may be, human nature is so strange a mixture that the grossest wrong will find champions, if the wrong has dollars in it. That individuals growing quickly rich by the process of keeping the mass of the people poor is looked upon as a proper thing by those, even who discourse at length on the responsibilities of human brotherhood, and this being so it follows that the only way to make sure that the issue of the battle will be on the right side, is for those who are the victims and sufferers to gird up their loins and make it understood that they are in deadly earnest. Every kind of pretense is being pressed into service against beating down the tariff wall between the Dominion and our neighbors to the south. All the old arguments that were used in times past to lash neighboring nations into frenzy and produce war with all its useless misery, patriotism, jealousy, suspicion, the old stupidity that one nation can only become great by making another nation little, and so on without limit, everything in fact except the real thing, the whole of the real reasons for the fight, the protected interests are making, can be summarised in a line or two. Here they are: "We have made money by protection in the past; we are making money by it at present; and we want to continue to make money by it in the future." If we farmers hope to get justice done us, we shall only be able to effect our purpose by using all the weapons at our disposal. It is necessary for us to avail ourselves of every

Handsome enough for the city lawn—Strong and cheap enough for the farm

Peerless Lawn Fence is made from heavy, No. 9 steel wire, all galvanized and coated with white enamel paint. It is built so strongly that it will last for years and it cannot rust. It costs less than one wooden fence and will outlive two. It will add to the appearance of any property. Let us send you the cost of fencing with

possible avenue of protest and appeal so that our influence may be felt. At present we have the issue out before us in a concrete form in the reciprocity agreement, which is being discussed at Ottawa by the federal parliament. It is an attempt to undo in some measure the wrong that the protective principle has done in the past, to open the avenues of exchanging the necessities of civilization between two kindred peoples. There are some of us who would like more than the agreement gives, but while this is true it is also true many are genuinely surprised that it gives so much, at any rate the fact that it proposes to make it possible to exchange freely the natural products of the two countries gives to the producers of the Dominion access to the markets of ninety millions of people, a fact which in itself is pregnant with possible developments, all of them of the most helpful kind. The farmers of the West will be recreant to the duty they owe themselves and this Western country if they do not unite in an unanimous demand that the agreement be endorsed. Its adoption will be a departure in policy, making known not only to the whole of Canada our intention and determination that the West of this Dominion is going to be heard in shaping the policy of Canada, but it will be a notification to the world outside that the conglomerate population of this country is not going to stultify itself by any narrowness of policy even when mis-called imperialism; that in fact we do not regard our imperialism as imposing upon us any duty of enmity toward the great free nation to the south of us. There has been—we are all cognizant of it—a disappointment that the duty on implements has not been materially reduced, but this can for the time being wait, not as a matter abandoned but as necessity deferred, a matter toward which our efforts in the immediate future may be directed. No farmer in the West will rest content until the implements, so essential to Western farming, are freed from the unjust impost at present placed upon them. But we shall be unwise to let our strong feeling on this matter interfere in any way with our support of the reciprocity agreement. Again the imperial preference under which the Mother country is allowed to enter our markets, on terms denied to all other nations, is sufficient indication that the unity of interest all thoughtful Canadians entertain toward the Motherland, is not going to be in any way diminished, and the self-styled patriots can be appeased by an appreciable alteration

of the preferential duty. The farmers of the West will hail with feelings of the most complete satisfaction, the raising of the preferential duty from 33 1-3 per cent. to 50 per cent., and should this be opposed by the protected interests another proof will be given to the many we already have, that the patriotism of these gentry is only a cloak to hide the selfish purposes of the manufacturers. I am hopeful that at this juncture we will cast aside all party division and join forces to see that Western interests are served by the adoption of the reciprocity agreement.

The Mighty Dollar

And How Woman Makes It

It is usual for the country woman who feels the need "to make a dollar all her very own," to fall back upon her truck patch, the poultry pen, the butter crock or the egg basket, in rare instances a pet calf secured at the psychological moment through promise from her men-folk, fills the little purse; and the story goes too, that at some time, some place, unknown of course, even a baby colt was ceded by promise to an amiable woman by an immensely liberal man and the proceeds in that case filled two little purses; but, the popular avenues of finance and trade are bounded by the areas first mentioned so far as farmer women are concerned.

Of course the budget schemes of "Ladies'-Aids," etc., are conducted upon very different lines; here the various members meet weekly at each others homes, where bazaar goods are made a la wholesale, the pro tem hostess serving tea AND—with rigid and pre-limited parsimony for ladies are nothing if not consistent and it would ill accord with frugality and self-abnegation "to eat out" the hostess weekly when that expense would be better saved for the "mission."

A favorite scheme with many "Aids" is to do quilting for some friend whose liberality takes the tangible form of piecing her quilt and furnishing all the necessities including even the spools; and curiously enough the spools gage the value of the work done;—a dollar a spool is the specified and accredited price and great indeed is the solicitude evinced by those supersensitively "honest" souls lest a single needleful of the spool should be diverted to any work other than the quilt—even the knots are made small, and the last little inch of thread behind the needle's eye is made to sew its last stitch, the needle being pushed into the cloth first and threaded afterward and thus is Bible measure given to the employer which is obligatory especially in "Mission" work. Occasionally one more adventurous than her peers, branches out into the fairy realm of homemade fancy candies and cakes, the exultant exhibit of well blistered fingers seeming to compensate for the rigor of this difficult labor, blistered fingers being undoubtedly a certain test of unequalled zeal. When the city dame undertakes "a mission" of course both the butter-crock and the poultry-pen are impossible as also the calf and the colt, rare as they are, couldn't be undertaken as a regular source of revenue but the ubiquitous dame is not without ideals, nor ingenuity to accomplish her ends for all that.

On hand at present in the city of Winnipeg there is a gigantic plan afoot to reap a rich harvest from a very curious field not of weeds or wheat or potatoes but of violets.

Hospitals from Violets

Two years ago a philanthropist in this city, saw a terrible need for a children's hospital and conceived the idea of making violets out of tissue paper and putting them all on sale on a certain day and the total proceeds were devoted to the hospital cause. Last year twenty thousand were made and all sold out before 11 a.m. the sale day—at 10 cents per small "button-hole;" so that this year the organization is about to surpass itself and is making 50,000 violets to be put on sale on the Saturday preceding Easter Sunday. The city is to be divided into districts, a married woman and a number of girls, not too young, are to be appointed in each district to sell the flowers. They will sell from house to house and also to anyone on the streets and a charge of not more than 10 cents to be put upon any "button-hole." Meantime the fury of uncompleted pre-

parations is engaging the attention of all friends of the cause that has a moment to devote to this most worthy movement. Their procedure is quite similar to that governing the conduct of the Ladies' Aids afore mentioned. To illustrate fully—let us assume that fifty women in united conclave, each volunteered and pledged herself to bring, ready for sale, 1,000 violets. To the uninitiated this may seem a trifling undertaking, for one lone woman, but those who actually engage in it consider it a very monotonous and wearisome occupation, lacking in the exhilaration that working in groups produces; hence it became a popular scheme to create the little purple money makers through the medium of small parties assembled on the bridge-whist plan. Say fifteen ladies arrived by appointment at the home of a violetenthusiast and one skilled artist cut the little paper sections ready for the folding, while the folders at a given signal worked with might and main in the liveliest competition, for it must not be forgotten

The First of the Season

that a prize was held up for the most successful florist, the sole and unconsidered test apparently having been the number made and not the accuracy of finish, and here is where the "difference of opinion," that inevitable consequence of all feminine deliberations, (or so say the gossips) arose. Finally at the appointed hour the polls closed, so to speak and everybody ceased work instantly and the "toting up" began.

Counting Up

"Ninety-eight," triumphantly announced one worker, lightly waving her bunch above her head. Every eye in the room followed the swaying violets and many sceptical glances fell back again into every lap as the counting proceeded. "Give in your tale," inexorably insisted the impromptu clerk. "Fifty-nine," "seventy-two," "eighty-one," etc., came the reluctant returns as one by one hopes were dashed when the counts still left the first call easily in the lead.

"Let's count your bunch," cautiously suggested a still sceptical one.

"Yes, let's," was chorused on all sides. With the precision and accuracy based upon a determination to discover a shortage, the counting went on, surrounded by three circles one inside the other of interested spectators, breathlessly awaiting results. But the most careful checking failed to find a shortage and "ninety-eight" took the lead.

"But these aren't violets at all!" protested one—"they are—are"—still carefully considering an appropriate name; "cabbages," interjected a voice, "or

cauliflower," added another, "or peas," "or beans," "or thistles," shouted other voices, "or just common spite?" quietly submitted the owner of the unfortunate botanical specimens that seemed to have no prototype in nature.

One unflinching moralist doubtless of quaker stock or perhaps of covenanter strain favored "imposing the penalty of confiscating the whole nondescript production, both as a suitable punishment to the "ninety-eight"—er, for permitting quantity rather than quality to govern her in the prize competition and as a sound warning and deterrent to the alance of the workers." "No such capers will stand here," severely counselled the righteous one. As there was no telling where the axe might fall in a future match, it seemed the part of wisdom for some, knowing their own propensities perhaps, to recommend less drastic measures. Needless to say both ideas had adherents who stoutly stood by their own interpretation of justice. When matters had assumed a rather grave attitude and the violet trade seemed in a fair way to decline and go into insolvency, a caveat so to speak, arrived (also an inevitable sequence of feminist divisions, though the gossips never moot it) in the guise of the cutter who had worked with the accelerating speed of the March hare to keep ahead of the eager competitors, wholly unmindful of the fact, that no prize was possible to her, though she labored never so hard, for obviously a cutter and a folder could not compete and equally obviously why should a folder be rewarded and a cutter be unrewarded? With that natural instinct for generosity that is woman's chief characteristic and universal charm, one and all in blissful harmony acquiesced in making sale of the prize and the proceeds to fall into the violet fund, nor will the violet business languish for fervent votaries though the gift factor be eliminated. Zeal for the cause pure and simple now animates the manufacturers of those dainty purple elves, who will doubtless redeem all their pledges and be able to put on sale the Saturday preceding Easter those jaunty little flowerets the sale of which, it is fervently hoped, will relieve many an ache and pain from many weary little suffering patient bodies now waiting to be treated when this anticipated fund makes their treatment possible.

VALLEY RIVER RULES MADE CLEAR

Dear Editor Fireside:—You ask in a recent issue for the rules of the Valley River Ladies' Society on the question of admitting children.

In the official minutes of the first meeting held on February 10, 1910, I find the following rule, viz.: That the younger ladies of Valley River be invited to join the society and attend the meetings. It was suggested that in cases where mother and daughter could not both attend the preference should be given to the older lady.

The question of bringing little children is left, naturally, to the mothers themselves, but as no meeting has yet been held at which children and quite little babies have not been present, it is clear that there can be no rule excluding them.

Trusting that this will make things clear to your correspondent, Mrs. Terrell.

M. E. TAYLOR,
Sec'y V. R. L. M. B. S.

BROKEN VOWS

Editor Guide:—An explosion from "Dynamite" with no serious results!!

With reference to an article in Guide of 22nd ult., where someone is evidently keeping in the dark, calling herself "Dynamite," she was making strenuous efforts to blow to atoms the candid opinion of Oliver King, who spoke to my mind very much to the point regarding women's rights, also dower law. In fact he put the gilt edge on the situation. Now, Dynamite is curious to know what Mr. King's theory is on the matter. Well, I would vouch that he did not mean for "Women to wear the breeks." However, he blazed the line in the right place when he spoke to the effect that the dower law was precisely for women with drunken rascals of husbands.

Now, Dynamite, you speak of a law to protect women from such husbands. Allow me to turn the search light on yourself. How would you like, if it be that you have daughters of your own, to see them have to bring their husbands under penalty of the law to make them support them? Also you "thank God that local option won't come about

through the weak sentiment of women." You ought to reverse the matter, for that is the very way God has ordained to bring about all moral reforms generally. He will make the "lion lie down with the lamb," and the weak despised things of the earth confound the mighty every time and will bring them about although all the big guns of "Dynamite" and all the explosive powers on earth were combined against him.

You also speak of the idea of women having equal rights. You seem to think the little Tommies would take all your attention. I will say to you as Ananias of old "thou foolish woman;" Mr. King was making an effort to look after those Tommies by removing the bar, before they some day in the near future become doubting Thomases, and the bread which you have cast on the water would return to you after many days and bring you a bitter spirit of remorse. "What you sow that shall you also reap." You ought, if you were a Christian, to thank God for Mr. King and the broad-minded, clear-visioned men that are standing up with a whole armor against the wiles of the devil.

Now, I am a nurse of a wide experience, have lived in three provinces and my profession calls me into many homes where the drink habit prevails, and I find the husbands of those homes come far short of the vow they took at the altar to be faithful in sickness and in health. Now a word in conclusion to all those women who were born so lucky with a silver spoon in their mouths and where the lines have fallen so conducive to contentment, who think equal rights not necessary. They have another think coming. If they are Christian women they "will bear one another's burdens" and thus fulfil the law of God.

MRS. J. MCINTOSH.

Covington, Sask., March 6, 1911.

PHYSICS AND FOOTBALL (Dorcas Jenks)

The rain was over, and Donald's spirits rose fifty per cent. as he picked out a dry spot in the back yard and posed his ball. One, two, three, he tossed the ball, and gave it a mighty kick. There was a sharp rattat-tat on a window-pane. The sash was thrown open, and Aunt Susie screamed. Too late! The ball had struck Uncle Henry full in the back, and he toppled over, striking both hands into the springy grass.

"O Donald," moaned Aunt Susie, from the window.

Donald stood petrified, watching Uncle Henry struggle to his feet, and stalk silently, loftily, into the house.

Donald went for the ball, and slipped into the barn to think things over. He was pretty sure he would not get to the Saturday ball practice, now. Uncle Henry was the last man in the world one could knock over, without consequences. Perhaps if Uncle Henry had boys of his own it might be different, but he certainly had no desire to encourage Aunt Susie's nephew in the delights of ball-playing. It was as much as Uncle Henry could do to let Don stay in school the required time.

"O Donald, Donald!" Aunt Susie stepped up behind the three-legged stool. "I suppose you saw your uncle. He'll be so cross. What will you do next?"

"I'll have to apologize, but I suppose I'll make a mess of it," said Donald, hurrying upstairs. He gave himself an extra washing and brushing, and really looked very shining and penitent when he stepped into the dining-room.

"Uncle Henry," he said, "I'm sorry I hit you." Then he gasped—this was not at all what he had meant to say.

"Huh!" ejaculated Uncle Henry. "I never drove a ball into a man when I was your age. Never had your chance to learn good manners, either."

Encouraged by Aunt Susie's smile, Donald crept to his chair, trying to make himself as small as possible.

"Did you get Tingley's order out, Henry?" asked Aunt Susie, in her tenderest tones.

"No, I didn't," answered Uncle Henry. "That dunce of a Dick pulled out the screw drawer to stand on, and then dumped Tingley's whole order of nails and tacks on top of the screws. The worst mess you ever saw, and all four of us have been picking them out all afternoon. Look at my fingers!" Uncle Henry thrust out his great palms wrathfully.

"Oh!" cried Aunt Susie, "they're all sore and bleeding. Why, Henry, I'm very sorry. I'll do them up in liniment after supper. I guess Don would better

THE Player- Piano FOR \$600.00

We have the only Guaranteed Player-Piano that can be sold for as little as \$600 on easy terms of payment.

It is a full sized instrument and contains many of the latest patents known to self-playing Pianos. The tone is sweet and the action perfect, while the case design is graceful and artistic.

This Piano store recommends nothing that is not right. But how very right this Piano is, you cannot judge until you see, hear and try it.

Write us for full particulars. Illustrated Catalog supplied on request.

THE WESTERN PREMIUM CO., Dept. G 5, Winnipeg, Man.

straighten that drawer out for you in the morning. Let him go with you in the morning."

Uncle Henry's quick, derisive laugh cut off Don's eager assent. "Three men and a boy worked all afternoon, and didn't make even a beginning, but perhaps that prodigy of a ball-player can do it all alone in one morning. If he can, I'll take him to the Carlisle-Colby game a week from Saturday." And Uncle Henry laughed again.

"Carlisle-Colby," gasped Donald.

"Do you mean it, Uncle Henry?"

"Of course, I do," roared Uncle Henry. "Never said a thing yet—I didn't stand up to, if it took my last cent. I'm safe enough though. Your Aunt Susie's always talking about school learning and books, and boys having a chance to play: I'm for giving them a chance to work."

Dick was opening the store when Donald appeared at seven, the next morning. Dick was in no pleasant mood, and his hands were bandaged.

"Hello, butter fingers," saluted Donald, with a meanness not to be excused.

"Won't be butter with you," retorted Dick. "It'll be raw meat."

"What did you spill them for?" demanded Donald.

"So that you might pick them out," flashed Dick.

"Here's Sawyer, with his fingers done up, and Jim Mullins, too!"

A few minutes later Uncle Henry stopped beside Donald. "What do you think of it?"

"Terrible," responded Donald feelingly, as he rubbed his bruised fingers on his trousers.

Uncle Henry went off chuckling, and Donald was left unmolested for about three hours. Then Dick happened along.

"How are your hands, Donald?" inquired Dick.

"All right," replied Donald cheerfully.

"Well, I declare," exclaimed Dick. "Donald has the thing 'most cleaned out, boys!"

The men hurriedly left their work and stood open-mouthed at the sight of the boy calmly thrusting a bright, new magnet into the drawer, and then pushing off the nails into the various boxes. Shouts of laughter brought Uncle Henry from his office.

"How'd you know to do that, boy?" demanded Uncle Henry, looking queer.

"We're studying physics, this year," replied Donald quietly, "and that is what made me think of trying the magnet."

"Physics!" repeated Uncle Henry.

"What's physics?"

"Physics"—Donald hesitated, then proceeded glibly, "Physics is the science of mechanics, heat, sound, light, electricity and magnetism." But then, he added hastily, "everybody knows that a magnet will attract bits of iron and steel."

"They do, do they?" said Uncle Henry.

"You went through the high school, Dick, why didn't you know it?"

"I—I—did," stammered Dick, "but I never thought of it."

"Hough!" derided Uncle Henry.

"Your folks should have sent you to college."

Uncle Henry went pounding down the store. The next thing, Dick heard the mighty voice demanding, "Give me Colby College. Hello, Colby? I'm Henry G. Marsh, of Wyndham Centre. I want two of the best tickets you have for the Carlisle game next Saturday. Get that? All right, sir. Good day, sir."—The Morning Star.

KEEP SWEET

Keep sweet, my dear, when things go wrong,
And life is sad and dreary,
Just start and sing a little song
To cheer the sad and weary.

'Twill ease your own heart of its load,
And make the darkness lighter,
Through rifted clouds the sun shall shine,
And some one's smile be brighter.

Forget the past and all its frowns,
Peace and contentment borrow,
And happiness may shyly call
To visit you to-morrow.
—Canadian Home Journal.

COOKING HINTS

Silver.—Put your silver in sour milk, putting the milk in a tin or aluminum vessel, let it stand for a few hours; take out, rinse and rub dry. The silver will look like new and there is no powder to get in the engraved portions of the silver. This has been successfully tried by

several, who report enthusiastically concerning it.

Cook.—I think you will find this plan a complete success for keeping the juice of berry pies from soaking the under crust: Mix a tablespoonful of flour with the sugar to be used and the crust will keep crisp and will not become soft or soaked with juice.

Bread Scraps.—If scraps of bread are grated, dried and laid aside for future use in cookery, it will save time when bread crumbs are wanted to bread cutlets or croquettes. After the crumbs are grated or ground in the meat grinder, they should be put into the oven with the door open, and left till they are thoroughly dry and slightly brown.

Baked Apples, Stuffed.—Core the apples, but do not peel them. Stuff them with minced pecans mixed with scraped maple sugar and bake. When done and just soft place them on rounds of sponge cake and cover with whipped cream.

Your wire clothesline may be cleaned perfectly by rubbing well with a woollen cloth saturated with coal oil and afterward with the same cloth liberally sprinkled with cleansing powder. The result is a bright, shining line that leaves no mark on the clothes.

PIONEER VIRTUES

We are apt to think that our forefathers had all of the "roughing it" and that we are living in, what we may call by comparison, easy days. The virtues of the pioneers are being extolled continually, at the expense of those who live in the century of the aeroplane and the automobile. However, we have not far to go before we find the same rugged virtues which made the early homes of Canada. Look at our own West, for instance, and the pluck and courage which are making what was once called the Great Lone Land into the golden granary of the empire. There is no lack of the pioneer virtues whenever occasion calls for them. We forget the numberless toilers in far places who are doing the day's work bravely and thoroughly, without ever a thought for praise or commendation. Far be it from us to pay anything but homage to the early settlers who "with toil of their To-day bought for us To-morrow." But let us not shut our eyes to the nobility and endurance that are all around us and are making the world well worth living in. All the good qualities did not pass away with the pioneers.—Can. Home Journal.

A GENTLEMAN'S ARRANGEMENT

A well known Kansas banker told a story the other day about the statute of limitations. There is a smile in it, plus some good philosophy.

One day an old Southerner walked into this banker's office. The Southerner was a typical gentleman of the old school; suave, courteous to the point of punctiliousness, and honorable to a degree of martyrdom.

"Well," replied the Southerner, "about thirty-five years ago I loaned a man down South some money—not a very big sum. I told him that whenever I should need it I would let him know, and he could pay me the money. I need some money now so I shall let him know, and would like to have you transact the business for me."

"My good friend," replied the banker, "you have no claim on that money. You can't hold that man to that money. You say it has been thirty-five years since you loaned it to him. The statute of limitations has run against that loan years and years ago."

"Sir," replied the Southerner, "the man to whom I loaned the money is a gentleman. The statute of limitations never runs against a gentleman."

So the banker sent for the money. And within a reasonable time thereafter the money came. There was a courtly gentleman at the other end of the transaction also.

SHOWING THAT ONE SHOULD NOT JUMP TO CONCLUSIONS

A quiet, bashful sort of a young fellow was making a call upon his fiancée, one evening, when her father came into the room with his watch in his hand. It was about 9.30 o'clock. At the moment the young man was standing on a chair straightening a picture over the piano. The girl had asked him to fix it. As he turned, the old gentleman, a gruff, stout fellow, said:

"Young man, do you know what time it is?"

The bashful youth got off the chair

nervously. "Yes, sir," he replied, "I
was just going."

He went into the hall without any
delay, and took his hat and coat. The
girl's father followed him. As the caller
reached for the door-knob, the old gentle-
man again asked him if he knew what
time it was.

"Yes, sir," was the youth's reply.
"Good night!" And he left without
waiting to put his coat on.

After the door had closed the old
gentleman turned to the girl.

"Lily," he asked, "will you tell me the
time; my watch has run down."

8754.—Ladies One Piece Dressing Sack, having
Body and Sleeve in One.

A Unique and Easily Made Dressing Sack or
Negligee.

This charming design was developed in china
silk of a pretty shade of pink, with embroidered
insertion for trimming. It is equally adapted for
lawn, percale, nainsook, or dotted swiss, and is
easy to make. The pattern is cut in 3 sizes:
Small, Medium and Large. It requires 3 yards
of 38 inch material for the medium size.

A HIVE OF BEES

THEIR USEFULNESS

Be good to the Rubbernecks. They are
good people who find time to attend
the weddings, and who make the public
that decides if the bride looked pretty
or was a fright. They also attend the
funerals and it is through them that busy
people learn if the corpse looked natural,
and if the relatives were as grief-stricken
as they should have been. They decide
if a woman's new dress is becoming; if a
girl makes a good match; if a new baby is
pretty. They make the sentiment that
is favorable or opposed to a girl's singing,
her piano-playing or her recitations in
public. They are the opinion-makers;
be good to them.

8761.—Ladies' Apron.

The Newest in Work Aprons.

Cut in sizes, Small, Medium and Large. The
medium size will require 3 5-8 yds. of 36 inch
material. This apron is just what the busy
housewife needs in doing the work about the
house. It is not only a protection to the dress,
but attractive as well. The front is in princess
style while the fullness in the back is held in place
by a belt. Percale, gingham, and linen are all
used in the making.

TORTOISE SHELL

The hawk's-bill turtle, together with the
squamous species, constitute the varieties
of marine turtles that furnish the tortoise-
shell. The hawk's-bill turtle is found
only in the Gulf of Mexico and the Carib-
bean Sea. The turtle is recognized by the
low, wide head, a long, narrow mouth,
the upper jaw prolonged and hooked like
the beak of a hawk. The shell is flattened
and serrated behind, with five vertebral
and eight lateral plates overlapping one
another like scales of fish. The color is
yellowish above, mottled with chestnut
brown and yellowish white below. Young
turtles have a black spot on the four
real pairs of plates. Old turtles have a
thin yellow plate on the belly, which is

8893.—A Smart Shirt Waist Model.

Ladies' Shirt Waist with Gibson Plaits.

A type of shirt waist that is easily made and
becoming to most women is here shown. The
pocket is a smart feature that may be omitted.
The sleeve is the regulation shirt sleeve with
straight cuff and lap. The pattern is cut in 6
sizes: 32, 34, 36, 38, 40, 42 inches bust measure.
It requires 7-8 yards of 36 inch material for the
36 inch size.

much sought after and commands a higher
price. This hawk's-bill turtle feeds on
seaweeds, crabs, mollusks and fish. Being
mostly carnivorous, the meat is not con-
sidered wholesome, differing in this respect
as well as in flavor, from the herbivorous
turtles.

The shells shipped from the Colon
district are taken from turtles caught on
the Lagarto and San Blas coasts of the
Caribbean Sea during the months of May,
June, July and August, when they ap-
proach the shore to deposit eggs, which
are laid on the sandy beaches above
high-water mark at night. Holes are
dug about one and a half feet deep, and
the eggs deposited therein. Generally
about three layings are made during a
period of nine weeks. The eggs are
lightly covered with sand and left on the
beach to be hatched out by the heat of the
sun.

The turtles are caught either while on
shore or in the water, by means of nets.
As a rule, they are killed immediately
after being caught, cleaned, and the shell
frame washed with sands, but on the San
Blas coast the Indians do not kill them,
but at once proceed to remove the shell
by subjecting the turtles to great heat,
afterward throwing the turtles back into
the sea. By the application of heat the
successive plates of shell come off very
easily.

THE HENPECKED CLUB

Of all the queer clubs that exist in the
world, you will find some of the queerest
in Lancashire, England, according to
London Tit-Bits. One of these is called

HOW TO SECURE THE GUIDE PATTERNS

To secure any of the patterns published in The Guide, all that is
necessary is to send 10 cents to the Pattern Department, Grain Growers'
Guide, Winnipeg, and state the number of the pattern, giving bust measure
for waist patterns, waist measure for skirt patterns, and the age when
ordering patterns for Misses or Children. It will require from ten days
to two weeks to secure these patterns as they are supplied direct from the
makers. No new worker need be nervous or afraid to use The Guide
Patterns. They are accurate and perfectly and plainly marked. Full
directions for making are given with every pattern you buy; also the
picture of the finished garment to use as a guide.

STEAM ENGINE FREE!

This Stationary Steam Engine has
brass lacquered boiler with safety
valve, whistle and stack, steel fire-

box with spirit burner, fly wheel with speed regula-
tor on metal pedestal, entire engine on wood base.
We give it to you free for a few hours' work sell-
ing our beautiful Litho-Art Post Cards at 3 for 5c.
These comprise Views of Western Canada,
Love Scenes, Birthday, Best Wishes, St.
Patrick, Easter, Comics, etc., and are fast
sellers. Write us today for \$4.00 worth of these
postcards, sell them, return money, and we will
send you engine post paid by return mail. We
also give a smaller engine, upright style, for sell-
ing \$2.00 worth of cards. **WESTERN PREM-
IUM CO., Dept. G12, Winnipeg, Man.**

the "Henpecked" Club. As the title
indicates, the members are all males,
and you can come across a club in almost
every Lancashire town of any size.

The meetings are held, as a rule, in some
bar parlor, and the discussions are about
members, and very often non-members,
who have the reputation of being hen-
pecked. When evidence has been brought
to show that a particular man has allowed
himself to come under his wife's thumb,
they tax him with it in the place of meet-
ing. The president delivers a lecture on
the danger of a husband permitting his
wife to usurp his position as master; and
when the others have endorsed his remarks
the person to whom the speeches are ad-
dressed is warned that if he continues to
stand the henpecking he will be made the
subject of a demonstration.

The announcement that a "henpecked"
club demonstration is to take place is
received in the district with mixed feelings.
The men applaud it and the women con-
demn it; and the local police, recalling
similar displays that led to trouble, be-
come a little anxious. On the evening
appointed the members of the club meet
at a public house, where they arm them-
selves with all kinds of household utensils;
then, led by concertina-players or a tin
whistle band, they start out and march
along the crowded streets of the district.
One man carries a broom, another a
swab, a third a shovel, or a coal-scuttle, or
a fender, or poker. Fire-tongs, blacklead
brushes, washtubs, buckets—everything
used in the home, in fact, is carried shoul-
der high. As they march along to the
music in front and the discordant clanging
of their baggage, they sing snatches of
songs, in which the name of the victim
occurs often.

The mission of the verses which have
been specially composed for the occasion
by a local poet, is to hold up the hen-
pecked one to ridicule, the reason for the
demonstrators bearing the household
goods, being, of course, to remind him
that, having fallen under petticoat govern-
ment quickly, he will become the slavey.

When they reach the cottage where
their victim resides they form a circle in
front of the door and sing and clang their
fenders and coal scuttles more loudly than
ever.

The man inside is invoked by the
president during a halt in the program
to "be a man" and join his brethren.
Sometimes, if he looks upon the affair
as more of a joke than anything else,
he does their bidding, and they re-form and
march to headquarters with him at the
head. Usually, however, his wife appears
instead with a bucket of soapy water,
which she promptly throws over the
demonstrators, or she quickly causes a
clearance with a hose pipe.

To the onlooker it is just an exhibition
for laughter and nothing more, but behind
the scenes there is generally a lot of trouble
and heartaching. A good number of
these "henpecked" demonstrations have
sequels in police courts. Sometimes it
is an enraged victim being charged with
assaulting a demonstrator, but more often
than not the sequel shows a wife appealing
to the magistrates for a separation order.

A "TEACHER WANTED" Ad
in The Guide will bring you appli-
cations from bright teachers all
over Western Canada.

A Poser for Mr. Rogers

(By The Guide Special Correspondent)

Press Gallery, Ottawa, March 17

Practically no progress has been made with the reciprocity debate this week, the discussion having been headed off by motions on the Farmers' bank, the capitalization of railways and other subjects introduced by members of the opposition. D. D. McKenzie, of Cape Breton, got the floor on Tuesday night long enough to conclude the speech which he had begun on the previous Thursday.

Geo. H. Bradbury, of Selkirk, Man., who is to be the first of the Western conservatives to speak against reciprocity, was expected to have the floor on Wednesday, but he was given time to think things over again by a motion asking for the appointment of a royal commission to investigate the organization and incorporation of the Farmers' bank.

Mr. McKenzie's remarks were chiefly with reference to the advantages which would come to the people of Nova Scotia through reciprocity, and he read a long list of articles on which prohibitive duties are now charged by the United States and which are by the new arrangement to be admitted free. When the duties were removed, he said, horse, sheep and swine markets, for instance, would be open to the people of the Maritime Provinces at their very doors.

It was all very well, he said, to tell the Nova Scotia farmer that he could sell his cow or his pig in England, but it would be much more convenient for him to sell them at Boston. To show that the farmers of the West also desired reciprocity, Mr. McKenzie read the resolutions passed by the executive of the Manitoba Grain Growers' association, and referred to Mr. Scallion's manifesto to show that conservatives as well as liberal farmers are in favor of the pact. He also quoted from Hon. F. W. G. Haultain's speech in the Saskatchewan legislature, and pointed out that of the 51 members of parliament, Dominion and provincial, representing Saskatchewan there was only one, R. S. Lake, of Qu'Appelle, who was opposed to reciprocity.

Hon. Robt. Rogers, of the Manitoba government, paid a visit to the conservative headquarters here this week, and told interviewers that there was "no sentiment in favor of reciprocity in the West, except among Grits who want to sacrifice their citizenship in an effort to get their party out of a hole."

"And what about Haultain, is he one of those?" Mr. Rogers was asked, but that was a poser which even he could not answer.

Reciprocity Debate

(By The Guide Special Correspondent)

Press Gallery, Ottawa, March 17

The fact that the Canadian representatives in the recent reciprocity negotiations with the United States absolutely declined to enter into any discussion as to free trade in manufactures, is the only important point that has come out in the reciprocity debate this week. The statement was made by Hon. W. S. Fielding on Wednesday, in reply to a question by R. L. Borden, who called attention to a statement made by President Taft that he had instructed the United States commissioners to offer "free trade in everything." "At the very earliest stage in the negotiations," said Mr. Fielding, "we certainly gave them to understand that we could not undertake to have any free trade in manufactures, speaking generally. There are certain articles which are on the free list, and which were the subject of discussion, but speaking generally, we gave them to understand that we were not prepared to deal with them on the basis of free trade in manufactures."

This statement by the finance minister has been given a great deal of prominence by the Eastern liberal papers, and was no doubt intended by Mr. Fielding as an answer to the declaration of the opponents of reciprocity that the present arrangement is the thin edge of the wedge that will eventually bring down the whole structure of protection. The government certainly does not intend at present to reduce the tariff on manufactured articles to any appreciable extent, but what public opinion may persuade them to do in the future remains to be seen.

No Reduction on Implements

It is clear from this as well as from a somewhat similar statement made by Sir Wilfrid Laurier in his speech last week, that it is not the policy of the government to make any reductions in the duties on agricultural implements or other manufactured articles, except the small concessions included in the reciprocity agreement. This fact was distinctly stated by E. W. Nesbitt, the liberal member of North Oxford, at a meeting at Woodstock a few days ago, and Glen Campbell, of Dauphin, Man., brought this speech of Mr. Nesbitt's to the attention of the house on Friday, and asked Sir Wilfrid Laurier if that gentleman had the authority of the government to make such a statement.

Sir Wilfrid replied that the statement made by Mr. Nesbitt was quite consistent with the policy of the government. "We have undertaken," said the premier, "to have reciprocity in natural products, not in manufactured products. At the present time our policy is before the house to have reciprocity in natural products and I shall be very glad if we have the assistance of our friends that far in favor of the farmers. I doubt very much if we shall. We will see afterwards what we will do afterwards."

Thereupon, W. D. Staples, the conservative member for Macdonald, Man., rose up in his wrath and smote the government, The Grain Growers' Guide, and various other people who favor reciprocity.

Mr. Staples Speaks

Mr. Staples said:—"I don't believe the farmers of the West have been justly used by the government in this matter. The hon. member for Regina was very prompt this afternoon to rise and read a telegram and state that he had not received an intimation from a single person in the West that they were opposed to the reciprocity agreement. I venture to say that if the farmers of the West are assured that by the passing of this reciprocal agreement, as the member for North Oxford states, there will not be a reduction in the tariff on the articles they use, then you would soon find the farmers of the West adopting a different attitude and sending a different kind of telegram. The farmers of the West are being misled, and only one side of the story is going out to them through a paper called The Grain Growers' Guide, edited by a man who is here at the present time, lobbying with the liberals in this house. It is easy for him to make a strong appeal through that journal to the conservative members of parliament to vote for the government on this particular question, but I wonder if The Guide will tell the people actual facts, that this government does not intend to reduce the duty on agricultural implements. If the farmers knew that, we would be getting a different kind of resolution from the various associations, from that which, I venture to say, has been prepared by R. McKenzie, the editor of The Guide, and R. C. Henders, who is president of the Manitoba Grain Growers. They have been disseminating this resolution at all their meetings, and every day I get in my mail a copy of the resolution (liberal cheers). I admit it, but just wait a minute," said Mr. Staples. "It is the same resolution all through, word for word, syllable by syllable, and it is sent out by that association to the farmers. I tell you, sir, that if the farmers knew that this government was not going to make any reduction on agricultural implements there would be a different kind of letter and a different form of resolution coming to the members of this house. We have at last succeeded in getting from the prime minister an admission that he is not going to change the tariff, but, after all, his remarks today are not very different from those he addressed to a deputation from the Manufacturers' Association some time ago. The farmers of the West will find, I believe, that they are not going to get out of this agreement what they expected."

Step at a Time

Dr. Clark, of Red Deer, Alberta, remarked that like his friend, Mr. Staples,

he had had some communications from the farmers of the West, and from all he could learn the farmers of the West had laid well to heart that the best method of accomplishing human progress, whether in politics or anything else, was to take one step at a time, and that they had also a great belief in the proverb that half a loaf was better than no bread.

During the afternoon a number of resolutions both for and against reciprocity were read to the house. M. Y. McLean, South Huron, presented a resolution from the Seaforth branch of the National Council of Agriculture in favor of the agreement, and also a resolution passed at a meeting of the farmers of the Bruceville district in favor of reciprocity.

Dr. Daniels, of St. John, read the resolution of the Board of Trade of St. Stephen, N. B., against reciprocity and Mr. Crosby, of Halifax, presented another resolution against reciprocity from the Kentville, Nova Scotia, board of trade. As Sir Frederick Borden represented that constituency, and a liberal had recently been elected to a local house from the same district by acclamation he thought it was fair to assume that this resolution had been passed by liberals.

Sir Frederick thereupon rose to inform the house that the Kings County Board of Trade, which was representative of the whole constituency, including farmers, had passed a resolution in favor of reciprocity by 87 votes to 2. That, he said, about represented the feeling in Kings County, and the fact that a liberal had been returned to the local house by acclamation had been largely due to the announcement of the reciprocity agreement a few days previous to nomination day.

British Columbia Resolutions

Martin Burrell, of British Columbia, next read resolutions passed by three fruit growers' associations at Summerland, against reciprocity, and B. B. Law countered with a favorable resolution from the Yarmouth Board of Trade.

W. M. Martin read a telegram which he had received stating that the reciprocity agreement had been unanimously endorsed by 200 delegates at the convention of the Saskatchewan association of rural municipalities held at Moose Jaw on the previous day, and remarked that the man from

Saskatchewan who was opposed to reciprocity had yet to be heard from. Dr. Roche, of Marquette, Man., however, read a despatch to the Winnipeg Telegram, from Fleming, Sask., saying that a resolution had been passed by the local Grain Growers' Association against the agreement.

A return laid on the table of the house a few days ago contained resolutions in favor of reciprocity from 25 local branches of the United Farmers of Alberta, as well as from the Calgary Board of Trade, the Magrath Agricultural Association, and letters from many individuals in different parts of the country. Practically no resolutions, however, were found in the return from Grain Growers' Associations in Manitoba or Saskatchewan, but on enquiry it is learned that members on both sides of the house have received large numbers of such resolutions, all favorable to reciprocity. These apparently have not been sent to the government, and consequently have not come before the house. It is expected that the liberal members will place the resolutions which have reached them on record at an early date by reading them in the house, but the conservatives are apparently reading the letters and telegrams and consigning them to their waste paper baskets.

BEATING LAST YEAR'S RECORD

(Red Deer Advocate, January 6, 1911)

Rosalind of Old Basing, the Champion milk and butter Jersey cow of Canada, bred and raised by C. A. Julian-Sharman, Red Deer, is making gratifying progress in her second official test. She completed a 12 months' official test February 24, 1910, giving 671.84 lbs butter in the year. She started another official test three months from that date on May 23, 1910, and up to December 16, 1910, had given 493.47 lbs butter so that she has now more than qualified in less than seven months for a second year's official record. At the present date, she is heavy in calf and giving 1½ lbs of butter a day. As in the past year's test Rosalind has been under the charge of Mr. Jack Jones and the record she has made coupled with the fact that she has never been off her feed, speaks volumes for his capabilities as a herdsman.

The Grain Bill

(By The Guide Special Correspondent)

Press Gallery, Ottawa, March 17

avored hearing all interests before a special committee.

Sir Mackenzie Bowell approved of the appointment of a committee and said the law should protect the Grain Growers without the confiscation of property. Senator Watson, of Portage la Prairie, also spoke in favor of a committee and said the remedy for most of the grain handling evils would be the establishment of a sample market, and to have all Port Arthur and Fort William elevators owned by the railroad companies. Senator Campbell, of West Toronto, favored a committee and said there was no objection to mixing before the government put its grade stamp upon the wheat, but after that there should be no mixing.

Committee Appointed

Sir Richard Cartwright said the discussion had developed the fact that there was difference of opinion over only two or three clauses and he would agree that a committee should be appointed to take evidence on them. He would refer to that committee clause 122, 123 and 242. These clauses covered the powers of the commission, the provision that terminal elevator companies could not deal in grain or hold country elevators and specified offences and penalties. The remainder of the bill was not controversial. It was the result of long experience and was now working well. He would commend to the careful consideration of the committee the three clauses referred to them, as they were the device of men who had experience in the operations of grain men. He would say that so far the modes of inspection had not been able to cope with the resources of gentlemen operating terminal elevators. Sir Richard moved and it was resolved that the bill should go to a special committee for the purpose of taking evidence and reporting to the senate, and that the committee consist of Senators Loughheed, Young, Davis, Douglas, Kirchheffer, Talbot, Bostock, Power, Beique, Roche and Jones. The committee will meet to take evidence on Tuesday, March 21.

The grain bill was considered by the senate in committee of the whole on Wednesday, March 15, and the discussion showed that the lobbying which has been done by the representatives of the Peavy interests has had its effects on the senators, several of whom spoke against the clause which prohibits companies or persons interested in terminal elevators from dealing in grain or owning interior elevators. As a result the bill was referred to a special committee to give all interests an opportunity to be heard.

Senator Loughheed, of Calgary, leader of the opposition, said the bill, like other legislation resulting from agitation, was most drastic and likely to be unjust to vested interests. A company having country elevators, he said, had to have terminal elevators, just as railroads had to have terminals. In addition to destroying a large part of the business of the grain companies which had terminal elevators, this clause would force the Quaker Oats Co., of Peterboro, to sell out either its terminal elevators or its Peterboro business. He thought the bill should go to a special committee in order that the vested interests might be heard.

Senator Beique, of Montreal, supported the appointment of a committee, and Senator McHugh, of Lindsay, Ont., who was of the same opinion, said he could see no reason as long as good grain standards were maintained, why a company should be forbidden to mix its own grain. However they mixed it, they would have to accept the grades given them when the wheat came out of the elevators.

History of Fraud

Senator Douglas, of Tantallon, Sask., said the handling of grain in Canada had been a history of fraud, and there had to be drastic treatment to cure conditions. As long as the same people owned country and terminal elevators and dealt in grain they would be able to so juggle and mix it that the reputation of Canadian grain in England would be injured. Someone must be defrauded when an elevator company sent out half a million bushels more No. 1 wheat than it had taken in. He

Manitoba Winter Fair

Continued from Page 12

Your executive received a request to increase the size of bacon hogs for exhibition purposes, but after discussing the question thoroughly decided that the weights as obtained at present—170-220 lbs. were the most satisfactory.

Weight Limit

A. B. Potter brought up the question of the winter fair board having raised the weight limit of hogs to 250 pounds. A general discussion followed and the question was then embodied favoring 220 pounds as the limit of weight, and this motion was carried.

A. B. Potter also asked about the proposal to lessen the length of time American hogs were to be kept in quarantine before being allowed into Canada, and after considerable discussion it was finally agreed that the present limit of thirty days was not too long.

Sheep Awards

In the class for pure bred long wools, ewe or wether lambed in 1910, there were only two exhibitors, A. J. McKay, of MacDonald, Man., and J. M. Douglas, of Tantallon, Sask. Mr. McKay had four entries, getting first, second and third. Mr. Douglas had one entry and got fourth. All the sheep shown were black, well covered and with good legs, the first and second prize winners possessing these characteristics in an outstanding degree.

The section for ewe or wether lambed in 1909 brought the same exhibitors into the ring, the same number of sheep and the awards stood in the same order. The feature of this section was the extreme smoothness of the sheep. They were filled, not over-filled.

Pure bred medium or wether lambed in 1910 brought a class of twelve into the ring. The exhibitors were Jasper, of Harding, Lang, of Oak Lake, McGregor, of Brandon, and Tram, of Crystal City. It was a fine class, smooth and even. The final awards were J. D. McGregor, first and second; W. L. Tram, third, and R. L. Lang, fourth.

In the section of the same class for ewe or wether lambed in 1909, Thos. and A. Jasper, of Harding, got first with a ewe of specially fine quality. She carried lots of muscle, and was very smooth. J. D. McGregor got second, third and fourth in this section. In the class for grade sheep, sired by any ram for long wool breed, lambed in 1910, A. J. McKay got first, third and fourth, and George Allison of Burbank second. The first prize sheep was nearly perfect, but some of the others were slightly overdone in the matter of fat.

In the section of this class for ewe or wether lambed in 1909, A. J. McKay was first and second, and J. M. Douglas, of Tantallon, Sask., third and fourth. The first and second prize sheep were especially fine from the dressing out point of view.

In the class for grade ewe or wether

lambed in 1910, honors were well distributed, first going to A. J. McKay, second to Thos. and A. Jasper, third to R. L. Lang, Oak Lake, and fourth W. L. Tram, Crystal City.

In this class for ewe or wether lambed in 1909, Thomas and A. Jasper were the only exhibitors. They secured first and second with two very fine sheep.

Grand Challenge Sweepstakes

Suffolk, grand challenge champions, the grand champion Zenolemn sweepstakes, best sheep, pure bred or grade, brought no less than eight competitors into the ring. It was a hard-fought contest, and the judge was slow in making his awards. Finally the ribbon went to J. D. McGregor, Brandon, for one of his very handsome Suffolk yearlings. After the award was made many of those present crowded round this lamb to go over his points, and many questions were asked of the judge.

The class pens of three ewes or wethers purebred or grade, lambed in 1910, brought six pens into the ring, the largest showing of pens so far made at Brandon winter fair. The awards were J. D. McGregor, first; A. J. McKay, second; R. L. Lang, third; and George Allison, fourth.

In the section for pens of three lambed in 1909, Thomas and A. Jasper got first, A. J. McKay, second; and James Douglas and Son, third.

Poultry Exhibit

A feature of the fair this year was the splendid poultry exhibit. Great improvement was noticed in every breed, both as to numbers and quality, and as the majority of the exhibitors were Manitoba breeders it is conclusive evidence that the poultry industry in the province is advancing very rapidly. All breeds were well represented, but the Plymouth Rocks headed the list and of these the Barred Rock was the leading variety. Leghorns were also well represented as well as the Wyandottes and the Cochins and Brahmas. Turkeys to the extent of 75 were shown, while ducks and geese also showed improvement in quality and numbers.

Amongst the large exhibitors were R. M. West, Glenboro; Mrs. Cooper, Treesbank; Geo. Lee, Bridge Creek; J. H. Clark, Virden; W. J. Currie, Lauder; Thomas Chambers, A. J. Carter and H. Hebbell, Brandon, and F. O. Sargent, St. Louis.

Some of the Winners

In spite of the fact that Barred Plymouth Rocks comprised the entries of many breeders, Mrs. Cooper, of Treesbank, secured easily the majority of prize money, having the first prize beside from one to three others in every section except the cockerel, in which she held second, fourth and sixth. In this division G. Lee, Bridge Creek, was first, while the rest of the prizes were divided between R. W. West, Glenboro; W. J. Currie, Lauder; A. F. W. Severine, Winnipeg, and one or two others.

By winning out in the pens, Mrs. Cooper wins for the third and last time the Sun silver trophy, offered by the Brandon Sun for the best pen of male and three females.

Rhode Island Reds also comprised a good class, in which E. W. Harrison, Winnipeg, and Kennedy and Irvine, Winnipeg, divided the honors for the single combs, while in the rose combs honors were spread out a little more between Kennedy and Irvine, R. D. Evans, Brandon, W. J. Saunders, Killarney, D. W. Agnew, Douglas, R. Fisher, Brandon, and W. H. Chambers, Brandon.

Percherons

Perhaps the finest array of Percherons ever seen in the West lined up before the judge in the classes for stallions foaled in 1907 and 1908. In the former class there were nine entries and a shout of applause went up from the spectators as the horses entered the judging ring. After considerable deliberation the judge, R. E. Drennan, of Canora, Sask., singled out three, Blondin and Harpeneur, owned by Colquhoun & Beattie, of Brandon, and Haton owned by Jno. McCallum & Son, also of Brandon. Harpeneur, who won many firsts last year was the largest and would scale more than any horse in the ring, his weight being approximately 2,250 pounds. He is a coal black horse and showed up to advantage. He was finally placed first, and Blondin who had the action and the style was placed second because he had not the draught qualities of Harpeneur. Haton, who was first last year at the winter fair, was forced

to take third place. The other exhibitors were Andrew de Montbel & Sons, St. Rose du Lac; J. B. Hogate, Brandon; Peter Templeton, Manor; F. J. Hassard, Deloraine, and J. H. Stout, Westbourne.

The class for stallions foaled 1908 was equally as interesting as the former and fourteen horses entered the show ring. They were a magnificent lot of horses and all of them would scale from 1,800 to 2,100 pounds. The three favorites were Iff and Kelley, owned by Colquhoun & Beattie, Brandon, and Illumine, owned by J. H. Stout, of Westbourne. It was a close run between Kelley and Illumine for first honors, but Illumine had the better of Kelley in the feet and the legs. Although Kelley had the scale and the best rump he lacked the action of Illumine, who was given first honors with Kelley second and Iff third. The other exhibitors were: Andrew de Montbel, St. Rose du Lac, who showed two horses; J. B. Hogate, Brandon, also with two good horses; F. J. Hassard, Deloraine, and J. H. Stout, Westbourne, who had four good horses besides the winner.

Shire Stallions

The largest class of Shire horses that have been seen in the West at a fair entered the show ring in the class open to horses of any age. The class was rather mixed, young and old horses being shown, but they were all good animals of this famous Scottish type. Chesters Legatte, owned by Colquhoun & Beattie, who was second at the recent Chicago International, carried off first honors. This horse has a great frame and magnificent legs and feet and showed great muscle. Bramhope Romeo, owned by Reginald Woodwiss, of Binscarth, who secured first place last year, was placed second. He showed some good characteristics of the famous draft breed. Third place went to Granger, a two-year-old, owned by Colquhoun & Beattie. This horse won his place on his good feet and firm set limbs. He was probably a little narrow for a good shire, but had plenty of good action. Fourth place went to Ben Hur, owned by John Stout, of Westbourne. This horse showed the size but not the shape of the typical Shire.

Canadian Clydesdales

Whole columns might be written about the showing of Canadian-bred Clydes without saying a word about the magnificent lot of imported horses. Certainly no finer lot of Manitoba-bred Clydes has ever been seen at a previous fair, and it shows what an impetus the breeding of these famous horses has had in the province during the past five years. Horses entered the ring that would have done credit to many a Scottish show ring. In the class for Clydes foaled in 1909, ten splendid horses entered the ring and it took the judge considerable time to single out the first three horses. Albion, owned by Andrew Graham, of Pomeroy, was a general favorite and easily deserved first honors. This horse has good scale and splendid feet and limbs. He showed fine breeding and good action. Prince Acme, owned by R. M. Holtby, Manchester, Ont., was a good horse but lacked the action. Fickle Fancy, bred and owned by H. E. McPhail, of Brandon, secured third place.

Stallions foaled in 1907 brought only two horses into the ring. They were good horses, however, and worthy of the prizes they received. Suckenough, owned by J. M. Webster, of Cartwright, was first, and Vigorous Heir, owned by Wm. Hassard, of Hamiota, was placed second.

Foals of 1910 brought five promising colts into the ring, and it took the judge some time to place the awards. First place was captured by Doune Lodge Montrave, owned by Bryce of Arcola. Second was won by Baron Brookside, exhibited by Frank Brooks, of Brandon; and third money was secured by Wyomys Style, owned by Gray, of Crandall. Fourth place was captured by Burn Blazes, a draft co't that shows promise of size and quality, owned and bred by William Guild, of Kemney.

Stallions foaled in 1908 brought out a class of eight and Prince Robert sired by Perpetual Motion and owned by Bryce, of Arcola, was the winner. This horse showed himself to be a worthy rival of his famous parent. Barron's Pride, owned by M. J. Hunter, of Lauder, was second. This horse was of the thick and heavy type and showed good action. Third place went to Baron Masher, owned by J. Crawford, of Chater, and fourth prize was secured by Show Prince, owned by McKirdy Bros., Napinka.

SYNOPSIS OF CANADIAN NORTH-WEST LAND REGULATIONS

ANY person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.

Duties—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter section alongside his homestead. Price \$3.00 per acre.

Duties—Must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent), and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may enter for a purchased homestead in certain districts. Price \$3.00 per acre. Duties—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.

W. W. CORY,
Deputy of the Minister of the Interior.
N.B.—Unauthorized publication of this advertisement will not be paid for.

Hackneys

Five splendid Hackney stallions entered the show ring for stallions any age. Every horse had a first prize to his credit and each and all had many admirers. Many thought that Terrington Billersphon, owned by William Hassard, of Hamiota, would gain first honors, as he had the size and showed good action. The judge, however, decided in favor of Samuel Smiles, owned by J. B. Hogate, of Brandon. This decision was very popular. Second place was secured by Heptonstall Grandee, owned by Jasper, of Harding. Fourth place was secured by Irish Ivory, owned by W. Clair, of Ochre River, a comparatively new exhibitor.

Belgians

As in the Shires the class of Belgians was open to stallions of any age and the largest class ever seen in the West faced the judges. The class was a strong one, all being good horses excepting one that was pronounced unsound. First prize

was awarded to Robert, a three-year-old owned by E. Rootmans & Sons, Regina. This horse weighed 1,850 pounds and possessed quality, good limbs and feet. Boston, owned by F. J. Hassard, of Deloraine, secured second. This horse had plenty of weight and action but his bones were rather slight and his back was just a trifle slack. Third money was secured by Phoebus, also owned by E. Rootmans. Victoria, another entry of the Rootman's stables was placed fourth. This horse is an aged stallion possessing substance and quality but rather coarse in the bone.

Navigation via Hudson's Bay

Continued from Page 22

edge of the coast begins to break up, and they cruise up and down along the edge of the solid land floe looking for whales. During the stormy weather and at nights the boats are drawn up on the smooth ice, props are placed on each side to keep them upright, and the cover drawn on and snugly secured, affords secure and comfortable quarters. The west coast of the Bay is patrolled in this manner until about the middle of June. Towards the end of June the boats cross through the floating ice to Southampton Island."

Where whale boats can traverse the waters, assuredly an ordinary steam vessel may navigate with safety. But if the water be open for whale boats early in May, it undoubtedly has been open all winter, because in that Arctic latitude thawing does not begin during April.

Nothing remains, therefore, but to establish the all-year navigability of the Straits to prove that the Hudson's Bay route is an all-year route and that a railway running to the port of Nelson would not be able, unless double tracked, to care for the traffic offering even from the first.

Dr. Grenfell's Evidence

Here is a little extract from Dr. Grenfell's log appearing in the "Northern Messenger" of February 10: "The visit of Earl Grey to our coast and two of our stations has been greatly appreciated. We are delighted to find him and his party so optimistic about this northern land. The Straits of Belle Isle have never frozen over in winter. Sealing steamers can always fight their way through. I can see no reason why Hudson's Bay, with its currents, should not be exactly the same. Hudson's Straits certainly never freeze."

Here again we quote the words of Commander Lowe from the "Cruise of the Neptune" to prove the open condition of Hudson's Straits: "The whales are known to enter Hudson's Straits early in the spring; they have been captured around Big Island (situated about the middle of the north side of the Straits) in April and May, and at the western end of the Straits in the latter part of May. They then cross to the west side of the Bay along the edge of the open water, being found in June and early July along the land floe of both sides of the southern part of Roes Welcome. Late in the autumn they again pass through Hudson's Straits going eastward. Some whales are supposed to remain during the winter in the waters of Hudson's Bay, as they have been reported by the Eskimos as being seen in the depth of winter off Mansfield (at the western entrance of the Hudson's Straits) and some of the more southern islands on the east side of the Bay."

Freezes Only at Shore

The same deduction can be made in respect to the Straits as has been made in the case of the Bay, viz.: that if the condition of the Straits permits the use of whale boats in April, steam vessels can navigate with safety, and that since there could have been no melting of ice by April, the Straits must have been open all winter. It can not be too strongly accentuated that the ice reported as being encountered in June and July was ice which earlier in the season must have been attached to the shores, leaving the waters of the Bay and Straits, except along the shores, practically unimpeded by floating ice.

Down the land lying on the west side of Davis Straits, in a stream 50 miles wide, flows the cold current from the north charged with the pack ice which by late November has reached the mouth of the Hudson's Straits. It then passes on along the coast of Labrador, and ultimately much of the ice finds its way through the Straits of Belle Isle into the Gulf of the St. Lawrence. Through this narrow Strait of Belle Isle, barely exceeding 10 miles in width, whaling steamers, according to Dr. Grenfell, can always fight their way, although they are from the nature of things forced to work head-on through 70 miles of ice. In the case of entering Hudson's Straits it is only necessary to cross at right angles, with 50 miles instead of 10 miles to choose a route through.

Also in conclusion let us contrast the Straits of Mackinac, which we have seen are traversed every day in the year, with the Hudson's Straits, which we firmly believe will in the near future also be navigated daily. The Hudson's Straits vary in depth from 300 feet to 1,200 feet, while their area is greater than the area of the Straits of Mackinac and the Lakes Huron and Michigan, which they connect, thrown in. The one is a shallow body of fresh water which freezes completely over many times during the winter; the other is a deep body of salt water nearly double the width of Lake Michigan, which never freezes over. One is a tideless water; the other has a tide varying from 20 to 30 feet; fogs, blinding, snows, fierce gales, are more frequent and characteristic of the Lake navigation than of the navigation of Hudson's Straits.

Will Investigate Conditions

Surely the people of the West, whose prosperity is so intimately related to this Hudson's Bay problem, will come to recognize that their worst enemy, next to the hostility of Eastern Canada, which paralyzes government action in this matter, IS THEIR OWN INCREDULITY AND APATHY. Apparently nothing short of sending a vessel through these Straits and across this Bay during the winter or early spring months will break up this incredulity and apathy, which undoubtedly has its chief support in the ignorance of conditions which has been allowed to continue and even fostered by our federal governments during the last quarter of a century.

The committee is endeavoring to ascertain the cost of such an expedition. If the people, by their financial support to the subscription fund, make it possible, the vessel will be sent. Persons wishing to join the expedition and willing to pay for a passage should communicate with members of the committee. The price of the passage is not yet known. Should the passage be made in safety during April, winter navigation will be demonstrated and much more besides that the people of the West need to learn.

FARMER'S SCRAP BOOK

Every farmer should keep a scrap book and cultivate the habit of clipping out of the farm journals or other papers the things which he reads and desires to remember or call to mind again. It is a poor plan to destroy your farm paper as soon as you have read it through. Instead, go carefully over it and clip out anything you find that interests you, tables of valuable information, recipes, plans or illustrations that you think you might need for future reference. Cut out these articles and paste them in the scrap book under some system of classification that will be a good index of titles. —The Twentieth Century Farmer.

FLAX BULLETIN

There has been prepared in the provincial department of Agriculture at Regina a bulletin on growing flax in Saskatchewan. The bulletin is now on the press and will be available for free distribution within a few days. It discusses in simple language the preparation of soil and of seed, the time at which to sow, and the methods of harvesting flax, the outlook for flax-seed in the markets of the world, the prospects of some use being made of the straw, and a number of other phases of the question—all from the standpoint of Saskatchewan.

Dreams Cannot Picture

That home life in which every note of discord has been hushed by the Grand Harmonious Voice of a

DOHERTY PIANO

This world renowned instrument has obtained its renown from three solid facts that have distinguished its career from the first.

1. ITS INBRED QUALITY of material and workmanship.
2. ITS MATCHLESS DEPTH OF TONE has wrung the highest tribute of praise from the greatest living professionals, and no less is this outstanding feature felt by the interested amateur who compares it with anything else in the realm of music.

3. ITS PRICE IS FAR BELOW that of much advertised pianos that have neither quality, tone nor temperament to recommend them.

You may test all this by a

GRAIN, LIVE STOCK AND PRODUCE MARKET

WINNIPEG MARKET LETTER

GRAIN GROWERS' GRAIN COMPANY, LTD., MARCH 20, 1911

Wheat:—The past week has seen wheat take an advance of about 2 cents per bushel, owing to a better export demand and a feeling that is setting in in the American markets that the decline was over-done, and the winter wheat crop is not all that earlier reports seemed to indicate. The demand for all straight grades has been good. The condition of the winter wheat crop seems to be a bone of contention at the present time between the big operators in the Chicago and Minneapolis markets, and sentiment is very much mixed. However, it must be remembered that since the British buyers got badly left last fall when they bought their supplies at a fancy price and the market has been declining almost steadily ever since,—they have been buying from hand to mouth for the last six months. Any crop scare on this side, or unexpected small world's shipments, would probably mean quite a demand for our wheat from Great Britain. Altogether the situation looks to us as if wheat will do a little better.

Oats have advanced considerably, many of the nervous "shorts" having concluded that the decline has gone far enough. Also there is a considerable export demand for our oats, and altogether the situation in oats is improving. We cannot do better than express our former opinion, that farmers who can hold their oats into the summer, will get considerably better prices for them.

Barley:—The situation in barley is unchanged. The demand is rather indifferent. Flax is holding practically unchanged.

Winnipeg Live Stock

Cattle

Prices offered for choice butcher cattle continue as strong as ever. \$6.25 per cwt., being offered for real good animals. There are however, but few head of good stuff coming. Packers are bringing in beef from the East in order to have enough to supply the trade. Dealers have stated that they think that the spring run of fed cattle will be practically a negligible quantity and that prices will be correspondingly high.

Cattle prices quoted are:
Best butcher steers \$5.75 to \$6.25
Fair to good butcher steers
and heifers 4.75 " 5.00
Best fat cows 4.75 " 5.00
Medium cows and heifers 4.25 " 4.50
Common cows 3.25 " 3.50
Best bulls 3.50 " 4.00
Common bulls 3.00 " 3.25
Stockers 3.50 " 3.75
Choice veal calves 5.00 " 5.50
Heavy calves 4.50 " 5.00

Hogs

Hog prices are hovering between \$7.50 and \$7.75 per cwt., dealers succeeding in getting quite a number at the former price during the week.

Hog prices quoted are:
Choice hogs \$7.50 to \$7.75
Heavy sows 6.00 " 7.00
Stags 5.25 " 5.75

Country Produce

WHOLESALE MARKET

Butter

Dealers state that the dairy butter market is in the worst shape that it has been in the past three years, stocks being much larger than at any time during that period. The lower grades especially are over-stocked. Dealers quote the following prices per pound, f.o.b., Winnipeg:

Fancy dairy 22c.
No. 1 dairy 18c.
Good round lots without culls
or mold 15c. to 16c.
No. 2 14c.
No. 3 12c.

Eggs

Dealers are having no trouble now in getting about all the new laid eggs they can handle. They are offering 19 cents per dozen for best stock.

Potatoes

Potato prices are off somewhat this week on account of shipments from the South. Dealers are offering 70 to 75 cents per bushel, f.o.b., Winnipeg.

Hay

Hay prices are unchanged from last week. Dealers quote the following per ton, on track, Winnipeg:

Wild Hay
No. 1 \$11.00 to \$12.00
No. 2 10.00
No. 3 8.00 " 9.00
No. 4 6.00 " 7.00
1 rejected 5.00

Timothy

No. 1 \$17.00
No. 2 15.00

RETAIL MARKET

Retailers offer the following prices f.o.b., Winnipeg:

Butter

Strictly fancy dairy in 1 lb. bricks 25c.
Strictly fancy dairy, gal. crocks 23c.

Eggs

Strictly fresh gathered 23c.

Dressed Poultry

Spring chickens, dry plucked, drawn,
head and feet off 22c.
Fowl, shipped same as chickens 16c. to 17c.
Turkeys, dressed and drawn 23c. " 24c.
Ducks, dressed and drawn 18c.
Geese, dressed and drawn 21c.

Note.—For the retail trade chickens and fowl must be dry plucked and not scalded.

Dressed Meat

Quotations for dressed meat given by retail butchers show no change from last week.

Beef

Prime carcasses 9c.
Front quarters 7½c. to 8c.
Hind quarters 10½c.

Pork

Prime carcasses 10½c. to 11c.

Veal (Skins on)

Prime carcasses 9c.
Heavy and inferior 8c. to 8½c.

HIDES, TALLOW AND WOOL

Dealers quote prices as follows:
Green frozen hide and kip 6½c. flat.
Green frozen calves 9c.
Tallow 4½c. to 5½c.
Seneca root 30c.
Wool 8½c. to 10½c.

TORONTO LIVE STOCK

Toronto, March 20.—Receipts to-day were 71 loads, with 1,459 head of cattle, 271 sheep and lambs and 23 calves. Trade was good and active for butcher cattle, but it was hard to do business with export buyers. The latter made a determined stand for lower prices and apparently succeeded in bringing the export prices down fully 15c. The indifference of export buyers gave local buyers a chance to secure several loads of choice export cattle for butcher purposes at around \$5.80 and \$6.90. The general run of butcher prices was firm at \$5.00 to \$5.75 for medium choice, and good medium at \$4.50. Butcher cows are about steady at last week's decline, ranging from \$4.00 to \$5.00, common mixed cows and bulls \$3.50 and \$3.75, canners \$2.50 to \$3.00. Sheep steady at \$4.50 to \$5.00. Lambs light firm at \$6.50 to \$7.00. Calves steady at \$4.00 to \$5.50. Hog market at 10c. lower, selects \$6.65 f.o.b. and \$6.95 fed and watered.

BRITISH LIVE STOCK

Liverpool, March 20.—John Rogers & Co. state that there was a fair trade at Birkenhead lairage to-day at Saturday's quotations, viz.: States and Canadian steers, 12½ to 13½ cents per lb. Sheep were a slow trade. States weathers making 13½ to 14 cents. Yearlings 15 to 15½ cents. Lambs, 17 cents per lb., sinking the ofal.

CHICAGO LIVE STOCK

Chicago, March 20.—Cattle receipts 25,000; market slow, weak; beefs, \$5.15 to \$6.85; Texas steers, \$4.40 to \$5.00; Western steers, \$4.75 to \$5.35; stockers and feeders, \$4.00 to \$5.75; cows and heifers, \$2.60 to \$5.55; calves \$6.25 to \$8.50. Hog receipts 60,000; market slow, 15c. under Saturday's average; light, \$6.35 to \$6.95; mixed, \$6.45 to \$6.85; heavy, \$6.35 to \$6.75; rough, \$6.35 to \$6.50; good to choice heavy, \$6.50 to \$6.75; pigs, \$6.50 to \$7.00; bulk of sales, \$6.60 to \$6.75. Sheep receipts 21,000; market weak to 10c. lower; native, \$3.00 to \$5.10; Western, \$3.25 to \$5.10; yearlings, \$4.75 to \$5.65; lambs, native, \$5.00 to \$6.50; western, \$5.25 to \$6.60.

1910 WHEAT ESTIMATES

Ottawa, Ont., March 20.—A cablegram from the International Agricultural Institute gives the following figures for the 1910 wheat crop. Hungary final returns 189,700,000 bushels compared with 198,482,000 preliminary estimates and 125,907,000 last year. Asiatic and European Turkey, 164,777,000 bushels compared with 104,176,000 reported by Beerbohn last year.

A "TEACHER WANTED" Ad in The Guide will bring you applications from bright teachers all over Western Canada.

Handsome Colored Roofs With RUBEROID ROOFING

Trade Mark Registered.

Pronounce it RUE-BER-OID.

RUBEROID Roofing is made in Red, Brown and Green as well as in the natural slate with which you are familiar.

These colors are beautifully soft, and lend themselves to most handsome effects in house building. As the colors are impregnated into the roofing, they never peel or wash off.

Note that RUBEROID is the only roofing made in impregnated colors—the roofing that combines the longest service with the greatest attractiveness.

Any RUBEROID dealer will gladly give you samples of RUBEROID in colors, or we'll mail them to you on request, with our Ruberoid Booklet K.

Ask for a sample, too, of SOVEREIGN Sheathing Felt—the best interlining you can possibly put into a house.

Farm Property for Sale AT SACRIFICE PRICES

To close estate we are prepared to sell 5 quarter sections near McGregor, Man., at \$6.00 per acre. Terms, one-third cash, balance to be arranged, with interest at 6 per cent. For particulars apply to

Standard Trusts Co.

PORTAGE AVENUE EAST
WINNIPEG, MAN.

It will Pay You to Carefully Read the Advertisements in The Guide each week. They Offer Many Money-Saving Opportunities

For nothing I will tell you all about Cement

These pictures show you plainly how simple a matter it is to change a decrepit frame house into one of cement-stone.

YOU pay nothing for what I tell you.

And the reason I offer you my services for nothing is simply that the companies that employ me want the farming community awakened to the value that cement—of the right kind—has for every farmer. Even if they never sell you any cement, they want you and your neighbors to be informed on the uses of cement—and the ease and simplicity with which you can cheaply use it.

No High-Priced Labor Necessary

I can soon show you that it does not require an expensive mechanic to use cement-concrete instead of lumber for ANY purpose. I make the whole subject so plain and simple that you yourself could easily renovate your frame house, barn, hen house, wagon shed. I will tell you how to make a hundred farm-utilities from cement quickly and cheaply—more cheaply than you could with lumber. And bear in mind the fact that you are charged nothing for this "Education in Cement-Using." You will not be bothered to buy anything, either. There are no "strings" to this talk at mine—not one. Just write me and ask questions.

Cement Endures—Lumber Decays

That alone is the biggest reason why you should overcoat your house and barn with cement, as I will tell you precisely how to do. Cement is almost indestructible. Buildings exist in Great Britain and elsewhere that were built of cement by the Romans two thousand years ago. For cement rightly used—as I will show you how to use it—makes structures fire-proof; wet-proof; decay-proof; warmer in winter; cooler in summer. And it is **ECONOMICAL**—much more so than lumber, for ninety-nine uses out of a hundred.

You may have my expert advice without charge. I can save you considerable money.

I charge nothing.

Read This List of a Mere Few of the Uses Cement has on the Farm

Then write to me for particulars of how to build these things from cement—doing the work yourself, if you like, in spare time. Don't wait to write because you are not just ready to make any improvement to your buildings. Talk it over with me if you only need a few fence-posts or a watering-trough. Even on those small items I can save you considerable. Just write me.

For the asking, you are welcome to use my knowledge. You can inform yourself fully on the whole big question of the use of cement for practically every use you are probably putting lumber to now. I will instruct you fully, in plain language, in the use of cement for making anything from a fence-post to a dairy-barn. And I can show you how to save money by using cement for any building purpose instead of using wood. Simply tell me your name and address and mention what sort of a structure you think of building or repairing—whether a residence, a poultry house, or even a drinking-trough.

You have nothing at all to pay for the advice and instruction I will promptly send you. Write to me before you buy another bill of lumber for any purpose. Be sure to.

Alfred Rogers
THE CEMENT MAN

Why not write me to-day? Accept my free services, make use of my knowledge to any extent; and you will not be under the least obligation or expense if you do. We want you to **KNOW** cement; and I will do all I can to help you **KNOW** it.
